NASHVILLE.—Retailers report a lull in business, but sales by jobbers are up to expectations. Collections are fair to good.

LITTLE ROCK.—The volume of business compares very favorably with that of former years. Collections continue fair.

NEW ORLEANS.—Good weather has improved retail trade, and favorable general conditions have made all trades somewhat active.

FORT WORTH.—Local retail trade is quiet, but jobbers report a good demand from the interior.

DALLAS.—Jobbers of dry goods, millinery and hats and caps report trade good for the season, but the principal part of the business now is simply filling-in orders. Collections are fair.

SAN FRANCISCO. — Building operations are increasing with favorable weather. Many firms are returning from Oakland. Business shows a gain, though shipments are still slow.

SEATTLE.—Trade is improving. Barley and oats are firm and grain is moving much more freely. Building is brisk. Prospects favor a flourishing business with Alaska this spring. Money is stringent and collections are only fair.

SPOKANE.—Trade is good, but collections are slow.

TACOMA.—Spring trade is active, although there is complaint of the slowness of deliveries of eastern goods. Collections are fair.

PORTLAND, ORE.—Business in all lines continues active. Collections are good.

TORONTO.—Navigation here is practically open and is expected to give an impetus to some lines of wholesale trade. In a great many lines of business the wholesalers are so busy, however, that they would not welcome any further demands upon their capacity. Dry-goods men still complain of the slowness of deliveries of textiles. They are now endeavoring to keep up with an active sorting trade. Prices are very firm in all lines, and further advances are not impossible. Jobbers in men's hats are talking of higher prices all round. Hatters complain they are unable to get enough better class hats of split straw to satisfy the demands of the trade. The grocery trade is reported rather more active. Hardware men are sending out large shipments, particularly to the west. Country trade has a quieter tone owing to bad roads, but the commencing of the season's operations in northern Ontario and the Cobalt district is having effect upon general trade. Ontario collections are generally fair, but those from western Canada are still inclined to be slow. Grain is now moving fairly well, and this is steadily but slowly relieving the situation. Money here holds fairly firm.

MONTREAL.—Wholesalers in most lines are still working hard to catch up with orders in hand and are still handicapped by the slowness of manufacturers' deliveries. Reorders are good in dry goods. Textile prices hold very firm. The movement in hardware continues very heavy, and will be still heavier as soon as navigation opens. Small goods are moving briskly, but it is in heavy lines that the great trade of the year is going to be done. Machinery shops of all kinds are exceedingly busy, and car foundries here have unlimited orders on hand. Metal prices are generally firm. The grocery trade is fairly active. Sugars, teas and canned goods hold firm. All lines of wholesale trade report there is some slight improvement in collections. Last year navigation opened at this port about April 7. This year it is likely to be a week or two later on account of the thickness of the ice. Ice breakers are at work in the St. Lawrence, and by this means it is expected the harbor will be clear earlier than it otherwise would be. The government will this year spend $2,000,000 on the waterway from Montreal to the sea. The coming season promises a record volume of shipping business. Passenger traffic east and west is good, and while the freight business is not quite so well assured, it is expected to be heavy.

VANCOUVER VICTORIA.—Business is active in all lines, and the outlook favors a very brisk summer. Wholesale goods are moving well, and a good retail demand is reported from all parts of the province. The shipping trade is very active. The demand for flour for the Orient is heavier than it has ever been before. Owing to lack of transportation facilities, however, it is said millers are unable to obtain the grain they need. Collections are generally fair to good.

WINNIPEG.—Spring and summer goods are still going out, and there is every expectation that the season will show a very great volume of business. Retail trade has already been heavy, but country roads are now in a discouraging condition. The transportation question is still attracting great attention. There are large quantities of grain to be moved, and on this account there is some fear for deliveries of merchandise. Money is still tight and collections slow. Large numbers of immigrants are already coming into the country, and a record movement in this regard is expected.

FINANCIAL.

Money Market.

During the past week, while the New York banks did not gain from the Treasury to such an extent as in the preceding one, there was, nevertheless, a further approximate increase in their cash of about $3,500,000. The loan market was also affected sentimentally by the evidences of increasing ease in money abroad and by expectations of a reduction of the Bank of England rate, which were verified on Thursday, when the rate was marked down from 5 to 4½ per cent. The loan market reflected these circumstances by further concessions in time money, the extreme quotation in this respect being 5½ per cent. for loans maturing after the end of the year. Owing to the abundance of call money and the fact that renewals were at 2 per cent. or a fraction higher, the demand for short period loans — sixty to ninety days — was slack, and as low as 4½ per cent. was quoted in some cases for such accommodation, four to six months' funds being also a little lower at 5@4¾ per cent. The market for commercial paper was somewhat more active, with an increased amount of offerings and a better buying demand.

New York Banks.

In its principal items the New York Clearing House statement of averages for last week approximated closely to the preliminary estimates based on the actual movements of money for that period. The increase of $6,143,600 in loans, however, seemed rather small, taking into consideration the revived activity of stock speculation, and the shifting of loans from London to New York, which, it was believed, had been in progress during the week. The increase of $10,533,000 in the cash averages was, however, in fairly close accord with the known facts in that regard, and the gain of $16,895,800 in the deposits was also normal under the circumstances. While there was an increase of $4,223,950 in the amount of reserve required, the surplus reserve, nevertheless, increased $6,309,950, and leaving the United States deposits out of the account, the surplus was no less than $9,383,975 larger. The figures of the statement compare as follows with those of the preceding week:

	April 6	March 30	Changes
Loans	$1,062,688,800	$1,056,545,200	I. $6,143,600
Specie	206,958,000	195,659,700	I. 11,298,300

Deficit	2,411,500	4,644,575	Dec. 1,751,050

Bank Clearings.

[By Telegraph to BRADSTREET'S.]

BRADSTREET'S Bank Clearings Report for the week ending April 11 shows an aggregate of $3,053,450,000, as against $3,066,959,000 last week and $3,178,508,000 in the corresponding week last year. Canadian clearings for the week aggregate $80,975,000, as against $64,226,000 last week and $69,937,000 in this week a year ago. Following are the detailed returns by cities for this week and last, with percentages of increase or decrease as compared with this week in 1906:

	April 11	Inc.	Dec.	April 4
New York	$1,923,181,000	....	9.2	$1,952,482,000

Foreign Exchange.

Foreign exchange quotations showed a further tendency to advance, although the movement had more of the excited features of the advance in the preceding week. The continued ease in the money market seemed to stimulate the demand for remittances, and the offerings of commercial bills were, on the whole, rather light. It was generally anticipated that the Bank of England rate would be reduced on Thursday, and this fact was also apparently discounted to a certain extent by the market in the earlier part of the week, so that the actual announcement of the change on Thursday had little effect. It continues to be the prevalent opinion that the strength of exchange is mainly due to the repayment of loans made abroad by Wall street interests.

Closing quotations on Friday for actual business in other classes of bills were: Cables, 4.86@4.86.05; commercial bills, 4.81¼@4 82⅛; francs, 5.22½ less 1-16@5.19¾ less 1-16; reichsmarks, 93 15-16@94¾ plus 1-32.

The Bank of England on Thursday reduced its discount rate from 5 per cent. to 4½ per cent., the former figure having been established three weeks before, when it was reduced from 6 per cent. The bank showed for the week a gain of £1,115,031 in specie, and its proportion of reserve rose from 41.42 per cent. to 43.55 per cent. Increased ease was seen in the London open market, call loans being quoted at 2½@2¾ per cent., while discounts were lower at 3 11-16@3¾ per cent. The Bank of France this week displayed a gain of 3,700,000 francs in its gold and decreased its loans by no less than 254,300,000 francs, the note issues at the same time being contracted to the extent of 115,225,000 francs. Its rate remains at 3½ per cent., while in the Paris market the quotation for discount is 3¼ per cent. At Berlin the bank rate is still 6 per cent. and the market 4¾ per cent.

New York Securities Market.

The New York stock market has been a rather dull affair, with only a moderate volume of trading, which appeared to be nearly all of professional origin. The renewed ease of money here and abroad, of which this week's reduction in the Bank of England's discount rate from 5 per cent. to 4½ per cent. is the most significant illustration, does not seem to stimulate speculative interest in shares. Bonds, it may be remarked, displayed a decided hardening tendency as to prices, with an accompanying increase in their activity, which is a natural result of more favorable money conditions. In the stock list, however, the proceedings seemed to represent little more than the maneuvering of various groups of traders, and the only decided movements were of a bearish character, representing to all appearances efforts on the part of such interests to test the market with a view to raiding it in force. After the good bank statement of last Saturday and the tone of strength which prevailed in prices at the close of last week, there were naturally expectations that the present one would show some increase in the public participation. Nothing of this kind, however, transpired. The week began with narrow dealings and a decline in prices on Monday, from which there was a rally late in the day, due to short covering. On Tuesday the market reversed this programme, being steady at first and breaking rather sharply in the afternoon on reports of fresh issues of notes by various railroad companies, and on a statement that the Interstate Commerce Commission would resort to the courts in order to bring from Mr. E. H. Harriman the answers to questions which he refused to give when recently on the stand before that body. The market, it is true, tended to recover from this setback on Wednesday, but the following day, after an early advance, witnessed a renewal of bearish attacks, which on this occasion were attributed to reports of a decline in copper prices and unfavorable western crop reports, but which, on the whole, could without much stretch of imagination be credited to the manipulative bears and the absence of support in the leading speculative stocks. On Friday the selling movement continued for the greater part of the day, with an irregular rally toward the close.

Actual developments bearing on the stock market were mainly unimportant. Not a little discussion was heard on the subject of reductions in prices for copper, this being mainly responsible for the weakness which developed in Amalgamated, American Smelters and others of that group. Little attention was given by the street to the new issue of Wabash notes, on terms which are but little better than those granted to the Erie in connection with its recent borrowings in that way. It might be mentioned that the further slump in Erie's shares was accompanied by rumors that it would possibly seek further assistance in the money market, while as respects Southern Railway, the old story of poor earnings and possible danger to the preferred dividends was again brought out. The heaviness of the Hill stocks, and of Reading as well, was attributed to bearish activity in them, coupled with the fact that there still seems to be opportunity for belated liquidation by tired-out holders in those securities, the same being true of St. Paul. In the case of Union Pacific, while facts of a similar kind may hold good, there was more appearance of persistent bearish pressure than in other parts of the list. The United States Steel stocks in the early part of the week showed a considerable degree of strength, but this was lost in the later transactions, despite the persistency with which talk about a possible increase in the dividend on the common stock for the March quarter finds circulation.

Boston Stock Market.

Season	12,354,923	12,197,061	9,693,195

Boston Shoe and Leather Market.

Hemlock sole leather has been giving one of its spectacular exhibitions during the past week. Several of the large shoe manufacturers have made contracts for their requirements during the season of fall-goods making, involving the delivery during the next three or four months of approximately 750,000 sides. Prices are said to have been close to full market quotations. Union and oak soles have been normal. Satin and kangaroo grain are going forward on old sales; new business is still quiet. Finished splits are still in good demand. Patent-leather dealers are busy in supplying old orders, but new business is quiet. Hides are quiet and the market soft. Tanners do not buy except for immediate wants. New England hides are offered at 11½ to 12 cents. Calfskins have been reduced 5 cents per skin. Shoe manufacturers have not received as many supplementary orders for spring goods as hoped, and wholesalers are still holding back the placing of their fall stock orders. It is evident that some manufacturers have received some good orders, as they are in the markets for leather, but the general run of the trade is still waiting. Jobbers are trying to obtain some concessions on prices, but without making much progress. The *Shoe and Leather Reporter's* statistics this week are as follows: Last week, 105,629 cases; preceding week, 94,509; last year, 101,677; total for 1907, 1,319,964; total for 1906, 1,384,573; decrease, 64,609.

Boston Wool Market.

Extreme quiet has ruled during the past week, as manufacturers are well supplied with the direct wools from Australia and have been in the market only for small lots. The main interest in the market is now centered in the west, where shearing has commenced in many sections, notably in Nevada, Utah and Wyoming. At the same time there are fewer eastern buyers in the field than at this time for many years. The reasons for this are that the dealers, who are now forced to hold their wool for a long time on account of the new policy of the mills not to buy wool except as actually needed, are extremely unwilling to pay more than the wool is worth to them. One clip of about 200,000 pounds has been reported sold in Nevada to a western party at 18 cents, which is considered here as a high price, as bids in that locality are at about 16@17 cents, with wool offered at 19@20 cents and as high as 21@22 cents, with no transactions. The Utah clip is practically under contract, mostly to western operators. Eight months' wool is being shorn in Texas, but no sales have yet been made. Shearing of unwashed wool is also going on in the fleece-wool sections. Small sales have been made during the week in the local market of fall Texas at 21@21½ cents, territory clothing at 67@70 cents for fine and 65@66 cents for fine medium; scoured territory at 68@70 cents for fine and 65@66 cents for fine medium, and a lot of 50,000 pounds of South American low quarter blood, held over for two years, at 36¼ cents, which shows a profit to the seller. Foreign advices are still strong, this strengthening the local market, so that price changes are very slight.

THE PANAMA CANAL AND BOSTON.

In a recent editorial the Boston *Transcript* asks, what will the completion of the Panama canal mean to Boston? And it then says: "Important as our European trade long has been, is and will continue to be, it ought not to remain our only trade overseas. Both as a market for the crude materials of South America and the Orient, and as a producing and distributing point for manufactured goods, Boston, the chief port and capital of industrial New England, is in a position to reap far more immediate benefits from the completion of the isthmian waterway than is New Orleans, or Mobile, or Galveston, or any of the gulf ports which are enthusiastically hailing the canal as their particular gateway to a hundred Eldorados.

"Boston will not envy the gulf cities all the wealth which they may bring from the southern seas, but Boston will start in the race when the canal is open far ahead, in all except distance, of her ambitious southern competitors. For almost a century Boston merchants have had a share in the trade of Chile and Peru. Because of the far-eastward projection of the coast of Brazil ending in Cape St. Roque, a vessel from New Orleans bound around Cape Horn or through the Strait of Magellan to Valparaiso now has to sail a course practically as long as has a vessel from Boston bound to Valparaiso. The opening of the isthmian canal will shorten this distance, now about 9,000 miles, to 5,000 miles for a Boston ship, as compared with 4,300 miles for a ship from New Orleans. This difference of less than three days' steaming on a voyage of from seventeen to twenty

days represents the ultimate advantage which the isthmian canal will bring to the gulf coast as compared to New England.

"It is not enough, not nearly enough, to enable the gulf ports to monopolize either the immediate or the prospective benefits of the great new waterway. Our chief import from the west coast of South America is that indispensable raw material, nitrate of soda. New England's exports are machinery and manufactured goods of many kinds, now sent for the most part via New York, which has the only lines of steamers, and these slow vessels under foreign flags. The reduction of the length of the voyage from 9,000 miles to 5,000 ought to increase the volume of this commerce many fold, and make it possible for Boston to have again her own transportation service to South America, as she had in the days of sailing ships.

"But the west coast ports of South America are not the only markets to which access will be quickened by the isthmian canal. Boston is a heavy purchaser of Australian wool, and the present voyage from Melbourne, of from 12,000 to 13,000 miles, will be shortened to 10,000 by the isthmian waterway. Hong-Kong, the great entry port of the Orient, is now distant about 12,000 miles, via the Suez canal, and so is Manila, whence Boston brought last year 17,363 tons of the famous Manila fiber, valued at about $2,500,000. These ports will not be drawn appreciably nearer Massachusetts bay by the building of the new American canal, but the voyage to Yokohama, which is more than 13,000 miles via Suez, will be shortened via Panama to 10,000. Our present commerce with the Orient is conveyed in large part by transshipment through British ports, paying tribute all the way to British sea power. But the canal will open an alternative route, where the Stars and Stripes may have an equal opportunity against the 'meteor flag,' their ancient and now victorious rival.

"The cutting of the isthmus and the joining of the two great world oceans will affect vitally not only our international exchanges, but the transcontinental trade, the home trade of the United States. Ever since a Boston ship—the Columbia—under Captain Gray, sailed in 1792 into the great river that now bears her name, and won the northwest coast for the United States by right of discovery, there has been a thriving commerce — American, in American vessels—around Cape Horn, between the Atlantic and Pacific. Since 1850 there has been another American trade between the two coasts by ship to the isthmus and across Panama by railroad. Even the opening of the transcontinental railroads has not killed this great and noble coastwise trade, which has, indeed, just been increased by a new rail route across the Mexican Isthmus of Tehuantepec.

"From Boston to San Francisco via the Strait of Magellan is 13,000 miles—five months for a sail vessel, which has to go around Cape Horn, or two months for a cargo steamer. The opening of the canal will reduce this distance to 5,300 miles, and the time for a cargo steamer to twenty days. The result of the canal, in reducing distance and reducing cost of transportation, will be little short of magical upon American commerce and American shipping between the Atlantic and Pacific coasts of the United States.

"It is in this great domestic trade, even more than in foreign or over-seas trade, that the isthmian canal will justify all that it may cost in money, labor and anxieties to the American people and their government. The great factor in the long stunting of our national development on the Pacific slope has been the ugly problem of transportation. The people of California especially, and to a less extent of Oregon and Washington, believe that the growth of their states has been dwarfed by the deliberate selfishness and greed of the railroad managers, through excessive rates on both the goods which they have produced for, and the goods which they have brought from, the great markets to the eastward of the Mississippi.

"To this charge the railroad magnates have always replied that it was the vast length of haul—one-third of it through a country still almost a desert and uninhabited—which imperatively fixed the rates of freight, and not the extortionate spirit of monopoly. Whatever the exact cause, the Pacific slope has until now been strangely isolated from the rest of the nation. But all this will be changed in a way most wonderful when economical cargo steamers can, without one breaking of bulk, lay down on the wharves of San Francisco goods loaded at Boston twenty days before. This quick, cheap transportation will transform these thinly settled states into great, populous, prosperous commonwealths, creating a rich, new market for the manufactures of New England on the one hand, and on the other enabling the timber, fruits and breadstuffs of the Pacific to reach the eastern states without having their profits absorbed in cost of carriage. Splendid as may be the over-seas commercial question which the isthmian canal will bring, the noblest work of the canal will unquestionably be the building up of the Pacific slope, which has the natural resources to sustain ten times its present population.

"This commerce between eastern and western America must be conveyed under our laws in American ships. Boston long led in the Pacific trade—so conspicuously that many years ago 'Boston men' was the vernacular on the coast for Americans. Boston of to-day has the ability both to build this new fleet and to freight it with the products of the skilled labor of New England. Our factories near the seaboard are in a position to profit by cheap water transportation through the isthmian canal far beyond their competitors of the middle west and the upper Mississippi valley.

"Illinois is now nearer California than is Massachusetts. But with the canal, its twenty-day voyage and its low freight rates, Massachusetts will be actually nearer the Pacific slope as well as nearer the over-seas markets of the Pacific ocean."

GEOGRAPHIC NOMENCLATURE.

The following important decisions relating to geographic names and their application were recently made by the United States Geographic Board:

Cordilleras; the entire western mountain system of North America.

Rocky mountains; the ranges of Montana, Idaho, Wyoming, Colorado, New Mexico and western Texas.

Plateau region; the plateaus of Colorado river and its branches, limited on the east by the Rocky mountains, on the west by the Wasatch range, and extending from the southern end of the Wasatch southwestward, southeastward and eastward to the eastern boundary of Arizona, following the escarpment of the Colorado plateau, and including on the north the Green river basin.

Sierra Nevada; limited on the north by the gap south of Lassen peak, and on the south by Tehachepi pass.

Cascade range; limited on the south by the gap south of Lassen peak and extending northward into British Columbia.

Coast ranges; extend northward into Canada and southward into lower California, and include all mountains west of Puget sound and the Willamette, Sacramento and San Joaquin valleys, and southwest of Mohave desert.

San Juan mountains; include all the mountains of southwest Colorado south of Gunnison river, west of San Luis valley and east of the Rio Grande Southern Railroad.

Sangre de Cristo range; extends from Poncha pass, Colorado, to the neighborhood of Santa Fe, N. M., thus including the southern portion, locally known as the Culebra range,

Front range; includes on the north the Laramie range as far as the crossing of the North Platte, and on the south includes the Pikes Peak group.

Appalachian system; includes all the eastern mountains of the United States from Alabama to northern Maine.

Attorney and Counsellor,
141 Broadway, NEW YORK CITY

SPECIAL NOTICES

"A little leak will sink a ship."

It is the little things that count. Bradstreet's list of failures show it is not the colossal breaks, but the little leaks that sink the ship.

The matter of ink may seem trivial, but if you are not getting the best possible results you have a leak.

PLUG IT. SAVE THE SHIP.

Use Carter's Ink.

ENTERED AT THE POST OFFICE AT NEW YORK, N. Y., AS SECOND-CLASS MATTER.

SATURDAY, APRIL 20, 1907.

It was in many respects a most remarkable gathering or series of gatherings that convened in New York this week to bear testimony to the advantages of peace among nations. Representatives of almost every interest that can be affected by war pleaded for the spread of peace, swelling a chorus that could not be robbed of impressiveness by occasional vagaries of utterance or now and then a discordant note. Space does not permit of a reference to so many different addresses, but it is proper to notice the resolutions in which before adjourning the conference condensed its proposals in the interest of the great object before it. Its first suggestion is that the government of the United States be requested to urge upon the Second Hague Conference the formation of a more permanent and more comprehensive international union to insure efficient coöperation in the maintenance of peace. It may be assumed that it is as a means to that end that it is proposed that the governments should provide that The Hague Conference shall hereafter be permanent, with representatives from all nations, meeting periodically for the systematic consideration of problems constantly arising in the intercourse of the nations, and that the representatives of the United States should endeavor to bring about this result. This proposal is not a new one, but it is a very sound one, and seems to present the most practical method of bringing about the settlement of disputes without a resort to force.

Less likely of speedy realization is the proposal that a general treaty of arbitration for ratification by all the nations should be drafted by the coming conference, providing for the reference to The Hague court of international disputes which cannot be adjusted by diplomacy. The formulation of such a document which shall commend itself to a majority of the powers seems a long way in the distance. No exception can, however, be taken to the suggestion that in case of disputes arising which it may not be possible to embrace within the terms of an arbitration convention, the disputing parties before resorting to force shall always invoke the services of an international commission or the mediation of one or more friendly powers. A seemingly practical proposition is that requesting the government of the United States to urge upon the coming conference the extension to private property at sea of the same immunity from capture in war as now shelters private property on land.

With the surrender of President Bonilla of Honduras to the Nicaraguans at Amapala and his deportation to Mexico, the Central American war may be regarded as having ended, unless it be that some ambitious leader might strive again to realize the project of unifying Central America by means of force. At times it has seemed that President Zelaya of Nicaragua might be such a man, and certainly he is in a position for the moment to exercise a preponderating influence in Central American affairs. Be that as it may, the notion of a permanent peace seems to be in the air. There is a possibility—even a probability—that it may be brought about by conference and negotiation. If it can be thus arranged it will be well; it will have to be arranged some way or other if the reproach of constant war is to be lifted from the land.

This week, which witnessed the anniversary of the great earthquake at San Francisco, and incidentally the commemoration of that event by the inhabitants of that city, was marked by a number of seismic convulsions in several widely separated parts of the world. The earliest reports told of an extended disturbance in Mexico, which wrecked a number of small cities, including Chilpancingo, Chilapa, Tixtla and Ayutla. Communication by rail has been seriously interfered with, so that the full extent of the damage is not known, while the threatened activity of the volcano of Colima fills the people in the neighborhood with apprehension. Earthquake shocks were reported a day or two later from Totana and Lorca, in Spain; from Constantinople and from Askabad, in the Russian transcaspian territory, and from the Austrian Tyrol, where a landslide resulted. Then came the news of the active eruption of the volcano of Puyehue in Chile. Still later came reports that an earthquake had severely shaken southern Luzon in the Philippines, that a fire at Iloilo had rendered 20,000 persons homeless, and that severe and long-continued shocks, estimated to originate thousands of miles away, were recorded by the seismologist Milne at London. The latest accounts tell of an earthquake shock at Charleston, S. C., distinct though without damage, and of a destructive typhoon in the Caroline Islands. It is seldom, indeed, that the chronicler has had to record so widely distributed a series of disturbances of this character.

Pronounced, not to say extreme, dullness has settled upon the Wall street stock market. Speculation is practically at a standstill and the investment demand for securities has been reduced to very modest proportions. During the present week the transactions at the New York Stock Exchange on some days fell off to little more than 300,000 shares. One of the arguments heard more or less in that quarter is that the present restricted activity is a result of the liquidation and decline in values which began immediately after January 1, and, in fact, can be accepted as an indication that the movement is reaching its conclusion, if it has not actually ended. It is urged that when after an advance in stock values and exhibitions of great activity in speculation on the bull side, the market witnesses a few days when the trading assumes exaggerated dimensions, it is pretty safe to conclude that the rise is terminating. As the reverse of this, dullness and inactivity such as the street now sees are held to be a sign that recuperation from the recent disorganized state of speculation and the unsettling of public confidence will be in order, even though such a process is in practice much slower than the breaking down of a bull movement carried to inordinate lengths.

In referring to the traction question in Chicago last year it was pointed out in these columns that by the decision of the municipality to issue $75,000,000 of certificates under the Mueller law, the way to immediate municipal ownership of traction properties had not been cleared of obstacles. The validity of the certificates themselves was at the time under challenge. That that challenge was not a groundless one is indicated by the decision rendered by the Supreme Court of Illinois a day or two ago, which apparently holds (the text of the decision has not yet reached us) that the certificates are invalid as creating an indebtedness in excess of the city's constitutional limit. The Mueller law does not seem to be affected, but the conditions under which it could be made effective are declared not to exist.

A statement of much importance in reference to the Pure Food law has been issued by Secretary Wilson within the week. This is to the effect that the serial number on labels and the statement that the article labeled is "guaranteed under the food and drugs act" does not indicate that the United States government guarantees either the purity of the article or that it is what the label says it is. What is meant by the statement is that the manufacturer of the article guarantees it to be pure and free from adulteration and warrants every fact stated on the label to be true. In other words, the guaranty is that of the manufacturer and not of the government. The serial number is assigned to fix the responsibility where it belongs, upon the manufacturer, and to protect innocent dealers who have a right under the law to rely upon the guaranty. This statement of the Secretary is made to protect the public against some misrepresentations which have come to his notice.

While an arrangement between a carrier and a shipper of grain under which the former makes allowances to the latter for the furnishing of elevator service may not be in itself unlawful, the allowances may amount to a rebate and an unlawful discrimination when in excess of the actual cost of the service rendered. This seems to be the gist of the ruling just made by the Interstate Commerce Commission in the case of the arrangement between the Union Pacific Railroad Company and the Peavey Company's elevators at Council Bluffs and Kansas City. In this decision, which is regarded as one of the most important rendered since the new railroad rate law became effective, the commission held that an allowance of 1¼ cents per 100 pounds paid by the railroad company to the elevators was excessive, and ordered that such allowance should not exceed ¾ of a cent per 100 pounds, such order to take effect on June 1 next.

Students of world politics will look upon April 15 as a historic day, for it was the date set by the treaty of Portsmouth for the military evacuation of Manchuria by the respective forces of Russia and Japan. As a matter of history, it may be interesting to note that the last Japanese troops were credited with having been withdrawn on April 8, while the Russian soldiers were ordered home on March 21. In this latter connection it should be said that under the treaty of Portsmouth Russia is allowed to maintain a certain number of soldiers as railway guards for the roads operating in the northern section of Manchuria, a like privilege being conceded to Japan within the southern territory. Thus the terms of the treaty calling for the evacuation of Manchuria within eighteen months after its ratification have been duly fulfilled, the treaty having been signed on September 4, 1905, and ratified on October 14, 1905.

THE FOUNDATIONS OF INTERNATIONAL PEACE.

Just at the moment the movements of the wings of the dove of peace, quiet as those are, are audible on every hand. The preparations for the holding of the second Hague Conference have been long in progress, and an unofficial Peace Conference has been in session in New York. It is too much to expect that even on a subject like the promotion of peace all should be agreed, and it has been noticed that there has been no little talk of a militant kind among the disciples of concord. Without doubt, from of old time some of the strongest friends of peace have been men of a militant type, and this proves to be the case with President Roosevelt, who has written a letter to the chairman of the Peace Conference in New York in which he lays down the doctrine that peace is not all, but that there must be a righteous basis for peace.

Though the President says, "it is our bounden duty to work for peace, yet it is even more our duty to work for righteousness and justice," and though normally peace is the handmaid of righteousness, yet if they are ever at odds it is righteousness whose cause we must first espouse. Following out this line of thought, it is no surprise to learn that the President believes that harm and not good would result if the most advanced nations, those in which most freedom for the individual is combined with most efficiency in securing orderly justice as between individuals, should by agreement disarm and place themselves at the mercy of other people less advanced and still in the stage of military barbarism or despotism. Anything in the nature of general disarmament, the President says, would do harm and not good if it left the civilized and peace-loving peoples, those with the highest standards of municipal and international obligation and duty, unable to check the other peoples who have no such standards and acknowledge no such obligation.

These statements come from a man who has by his actions already earned the right to be called a friend of international peace. It is not every ruler that can point to such a record as Theodore Roosevelt has already made as a composer of strife and contention. All the more does he recognize, as some orators of occasion may not, the substantial bases upon which an ordered peace rests, the firm insistence on justice, the submission to the law of right, the force that is necessary to render order itself secure. There will be many in the immediate future who will speak of peace with an irresponsible voice; the statesmen who have to put aspiration into fact in the hard treadmill of the world will be cautious about their treatment of the proposal of disarmament, which seems so attractive to the easy speaker, but is really beset by many pitfalls and calls for the most careful and comprehensive consideration, and that in the light of experience rather than of fancy. It may not be amiss to recall at this time that within six years after calling the first Peace Conference at The Hague to consider, among other things, the limitation of armaments, the nation which issued the call was straining all its resources in a war which numbered among its events the most tremendous battles in history.

THE MAKER OF MODERN EGYPT.

Now that Lord Cromer has retired from his position as adviser to the Khedive of Egypt, a few words of appreciation of the work done, and a review of some of the stirring events of the past quarter of a century in Egypt, may not be out of place. It is three months short of twenty-five years since native misrule and corruption culminated in a futile attempt at revolution by the Egyptians, a massacre of Europeans in Alexandria and the bombardment of the forts of that city by the fleet of Great Britain. From this bombardment really dates the occupation of the country by Great Britain, the supplanting of the mixed influences of leading European governments in Egypt by a strong, ostensibly native, but really English, government, the beginning of the restoration of peace to a large part of northern and central Africa, and the lifting of the oppressed peasantry of the country of the Pharaohs from what was practically slavery to something like industrial independence. As a result the Nile country, the birthplace of the great Jewish lawgiver, Moses, and a granary of the ancient world, is to-day wealthy, probably beyond anything witnessed in its early days. It is a fact of interest to Americans also that this country is to-day one of the two only serious rivals that our own great republic has in the production of cotton, the most commonly used covering of the human race.

The Suez canal, one of the great wonders of the modern world, was completed in 1869 by a French engineer, De Lesseps, who here made the great reputation fated to be dimmed later by the failure of the early Panama canal enterprise. The labor employed was that of the Egyptian peasantry, which was farmed out to the canal company by the Khedive, who was a part owner in the enterprise, later selling his stock to the British government. Foreign, or at least European, interference in Egypt dates back to 1877, when that country first defaulted in its debt payments, but joint control by French and English representatives of the finances of the country was not instituted until 1879. The extravagance and corruption of the native rulers, leading to the oppression of the people to a point where revolt was not only justified but absolutely inevitable, were great moving forces in the early embroilment of the country in domestic and foreign troubles; and yet from this corruption has risen, under foreign guidance, the new and modern Egypt.

Egypt early in 1882 was, in fact, a place of seething discontent, and the country was ripe for anything that offered an escape from prevailing conditions. Coincidently, in that year there occurred war in the northern part of the country and revolts of a semi-religious character in the Soudan, that country's great province. Arabi Pasha, the head of the Egyptian army, thought to drive all the Europeans out, and simultaneously there was a rising in the far south, a movement of the desert tribes against the Egyptians. The bombardment of Alexandria, while not shared in by the other European governments, was generally approved by all but the French, who refused to join in the affair, and thus forfeited all right to a share of the administration under the new régime. The country was occupied by a British army, the old army was disbanded, and British officers were appointed to reorganize a new force. They failed, however, to stop the rising tide of revolt in the Soudan. A mixed Egyptian and Soudanese army, under Hicks Pasha, was destroyed at El Obeid, to the south of Khartoum. General (Chinese) Gordon, once Governor-General of the Soudan, was prevailed upon to attempt to restore order, but, abandoned by the British liberal government under Gladstone, was forced to watch helplessly the rising storm. When too late to be of any use, popular anger forced the British government to attempt to save him. Lord Wolseley was sent up the Nile with a British army in 1884, and a splendid attempt was made by a part of the force to cross the Bayuda desert from Korti to Metemmeh to save Gordon. At Abu Klea a Dervish force for the first time met a European army and broke a British square. Here died Burnaby, the hero of the "Ride to Khiva," and later Sir Herbert Stewart, the commander of the British force. A few British soldiers reached the Nile, found a steamboat and ascended the river to Khartoum, to learn that the Mahdi had captured that city and that Gordon was dead. The British retreated down to Waydi Halfa, and the first act of the Egyptian drama closed in gloom and recrimination.

The maker of modern Egypt, a younger scion of the great English house of Baring, the bankers, had been in Egypt then for two years; originally an officer in the Indian service, he had been in Egypt in 1879 for a time as one of the European Comptrollers-General, but had gone back to India. He returned in 1882, and here really began the work of building up the country. As the representative of Britain, he was the consul-general and minister in Egypt, but as adviser to the Khedive, he planned the reform of Egypt's revenues and of its army. This was a slow and painful process, taking many years. Lord Cromer's right hand in military matters, with the title of Sirdar, was Major Kitchener, who was later to win fame as Lord Kitchener, of Khartoum.

The reforming of Egypt's financial affairs was a work of Augean proportions. All the leaks had to be stopped, the greedy pasha's peculations put an end to, honest administrators appointed, and a world of quiet work done against sometimes heart-breaking opposition. Improvement of agricultural conditions, and particularly of the condition of the Fellaheen, or peasantry, had to be made carefully and slowly. The abolition of the Corvee, or serf labor system, was successfully carried out, and the peasants allowed to purchase their freedom from liability to forced labor without pay. Irrigation works were planned and old canals and water courses restored to use. The stoppage of the Soudan trade was a source of damage, and to restore this Khartoum and the Soudan had to be reconquered. Kitchener, after reorganizing the Egyptian army, began to enlist the Nubian blacks and drill them, and in 1896 the southern frontier of Egypt began to be moved southward. The railway was extended from Wadi Halfa up the Nile for a space, then boldly carried across the desert to Abu Hamed, thence to Berber and, despite savage resistance on the part of the Dervishes, finally to Khartoum.

The battle of Omdurman in 1898, won by a mixed Egyptian, Soudanese and British force, gave Khartoum back to Egypt, and the Khalifa, the successor of the Mahdi, was in 1899 defeated and killed near El Obeid, the scene of the fatal defeat of Hicks. The Fashoda affair incidentally nearly brought about a clash between England and France. With the restoration of the Soudan, peaceful improvement further north was hastened. The natural flow of the Nile having become inadequate for the vastly increased irrigation projects, the Assouan dam, impounding the waters of the river between that point and Assiout, 200 miles north, greatly increasing the arable area, became an actuality in 1902. To-day central Africa is in direct connection with the rest of the world, and the tourist in England can buy his ticket to Khartoum as readily as to Paris or Berlin. Egypt, from being an uncertain element in the world's cotton supply, is now a large contributor of a high quality staple, the production being three times what it was in 1882, and its trade is expanding beyond the dreams of the most sanguine believers in its future. Few years can elapse before the Cape to Cairo railroad, the dream of Rhodes, is an accomplished fact, and Africa ceases to be a "Dark Continent."

All this has been the work of a rather reserved, stolid appearing man, who, working with improvised tools, has fashioned an army out of what was the most despised material, and using it in the cause of civilization and enlightenment, has given peace to regions which had not known its like since the world began. Great Britain has been traditionally well served by its civil employees and military men, but never better than she has been by the man who has just retired from active political life—Evelyn Baring, Earl of Cromer.

MONEY MARKET CONDITIONS.

Considerable attention has been directed to the unexpectedly large increase in the loans of the New York Clearing House banks, as shown by the averages for last week, which are printed in another column. In the face of a dull stock market the increase in this item was no less than $36,000,000, and although the cash items displayed a gain of some $7,600,000, the surplus reserve decreased by $3,300,000. In view of the fact that the new Secretary of the Treasury, Mr. Cortelyou, is disposed to do, and is actually doing, all that lies in his power to alleviate the strain on the money markets and to counteract the tendency of money to pile up in idleness in the United States Treasury, such results would in a superficial way seem to be somewhat anomalous. Still, the real explanation of the increase in the loan item probably depends on the Treasury's policy. Bringing about, as it has done, a lowering of money rates at New York, there is no longer any inducement for banks at the interior to put out their funds in Wall street, nor do borrowers in that quarter feel like paying high figures for accommodation secured from institutions outside of New York or from foreign sources. The recent strength of the foreign exchange market is justly attributable in a large part to the demand for remittances with

which to take up obligations incurred about three months ago, when the pressure on the money situation was most acute. At the same time many close observers are inclined to think that the domestic loans made in the New York market by institutions at other cities which had access thereto, enabling them to secure the advantage of the average high rates for money which prevailed with little interruption from last autumn down to a few weeks ago, and which have now been replaced by borrowings on lower terms from local banks, are primarily responsible for the additions to the loan account of the metropolitan Clearing House concerns just referred to.

How far such influences may extend it is of course difficult if not impossible to foretell. The fact that for the past week the stock market has been one of the narrowest and most perfunctory seen for a long time back counts for not a little. The evident decreased demand for money on the part of speculative interests is a matter which is bound to have an effect on the bank averages, even though this may not be fully exhibited in the published figures, owing to the system under which the latter are made up.

It must also be taken into consideration that the rise in the dimensions of the loan account of the banks at New York and throughout the country is not a new thing. On the contrary, the tendency has been running in that way for some time. It is shown in the returns of the national banks of the United States made to the Comptroller of the Currency under date of March 22, referred to in last Saturday's edition of this paper and printed in a more extended form in another column this week. Therein it is shown that, as compared with the same item a year before, the loans of all the national banks of the United States increased $392,667,399. Supplementing this, it is useful to give the position of the New York Clearing House banks as to loans, reserves and surplus reserves at this period for a series of years, which is presented in the following tabulated form, covering the figures for the past twelve years:

	Surplus reserve	*Total reserve*	*Loans*
1907	$15,852,925	$286,268,400	$1,099,657,100
1906	4,772,500	250,237,900	1,009,275,200
1905	9,352,400	294,277,900	1,099,611,100
1904	27,304,600	301,584,200	1,043,254,100
1903	3,741,300	224,949,000	902,779,500
1902	4,571,750	243,912,100	900,381,800
1901	7,938,200	250,260,500	890,956,000
1900	10,950,275	219,532,400	761,672,400
1899	19,471,525	241,591,100	768,354,200
1898	37,346,075	203,285,900	580,085,400
1897	46,170,050	187,649,200	502,512,600
1896	17,931,250	138,719,100	465,612,400

It will be seen at once that the loan item has reached the top notch for this period of the year, even if the figures are not absolutely record-breaking, while the total cash reserves are still below the figures at which they stood in April, 1904, when the loans were considerably smaller. Allowance has of course to be made for the great increase in issues of railroad and other corporation securities, the bulk of which have been taken by syndicates and bankers, who naturally place them in loans until they can be absorbed by the investing public. At the same time the expansion of loans, whether it is due to the cause just mentioned or to the increased business activity of the country in trade directions, is something which is distinctly calculated to cause reflection.

RAILWAY GROSS EARNINGS GAIN, BUT NET RECEIPTS DECLINE.

At this late day it is hardly necessary to remind one that although railway gross earnings continue to eclipse those of former years, net revenue displays a tendency to dwindle, corroborative evidence on this point being furnished by the returns for January and February, the two latest periods for which conclusive data are available. To find the causes for the losses suffered by net earnings during the months mentioned, the observer does not have to go far afield. In the first place, comparison is made with a period in 1906 when huge gains were scored in net earnings, the weather then prevailing being almost ideal for railway operations; in fact, from a railway viewpoint meteorological conditions were the most propitious experienced in a generation. On the other hand, the elements were not so favorable this year, and parts of the country, particularly the northwest, suffered from snow blockades and all the difficulties incident thereto. At the same time operating expenses this year have undergone considerable expansion owing to one cause or another, but chiefly to the high cost of materials and the increased wages paid to practically all grades of help. Therefore, in view of all the foregoing factors, one can hardly be surprised at the fact that while gross receipts for February advanced 7.7 per cent. over those of the corresponding month in 1906, net revenue fell off 5.9 per cent. In other words, gross earnings, aided by the excellent condition of business, increased $8,291,382 over the figures for February last year, the total for the month this year being $115,623,132, while net revenue decreased $1,809,716, on a total of $28,702,494. Here it becomes proper to explain that operating expenses in February the current year advanced no less than $10,101,098 over those of February, 1906, the ratio of increase being 13.1 per cent., a rather high percentage, indeed.

Words may throw considerable light on the trend of events, but the shortest route can be attained by producing the statistical results. Therefore this table, presenting, as it does, figures of gross earnings and operating expenses as well as net receipts for February this year and last, will prove instructive:

	1907	1906	*Inc.*
Gross earnings	$115,623,132	$107,331,750	7.7
Operating expenses	86,920,638	76,819,540	13.1
Net earnings	28,702,494	30,512,210	*5.9

* Decrease.

In the following table we show to what extent the various sections of the country contributed to the grand totals of gross earnings:

	1907	1906	*Inc.*
Northwestern	$7,178,171	$6,460,722	11.1
Central-western	9,864,587	9,621,241	2.5
Trunk lines	23,528,710	22,411,454	4.9
Eastern	2,333,068	2,249,458	3.7
Coal roads	9,134,760	9,079,251	.6
Southern	22,140,511	20,959,798	5.6
Southwestern	21,508,459	19,139,224	12.3
Pacific	19,934,866	17,410,602	14.4
Total	115,623,132	107,331,750	7.7

It will be seen that increases rule, although some of the groups record only moderate gains. The heaviest accretions are reported by the Pacific roads, the southwestern lines and by the northwestern roads, 14.4 per cent., 12.3 per cent. and 11.1 per cent. respectively. The southern group shows an advance of 5.6 per cent., the trunk lines 4.9 per cent., the eastern roads 3.7 per cent., while the central-western roads furnish a gain of 2.5 per cent. The hard-coal roads barely remain within the increase column, the increment being but six-tenths of 1 per cent..

This table sets forth the volume of net earnings in February, 1907 and 1906, and shows the amounts furnished by the various sections:

	1907	1906	*Dec.*
Northwestern	$1,617,429	$1,743,786	7.2
Central-western	2,487,147	2,750,363	9.5
Trunk lines	4,568,084	5,301,673	13.8
Eastern	262,015	544,080	51.8
Coal roads	2,378,665	2,630,503	9.5
Southern	5,060,329	6,142,832	17.6
Southwestern	6,553,866	6,167,529	*6.2
Pacific	5,774,959	5,231,414	*10.3
Total	28,702,494	30,512,210	5.9

* Increase.

Losses from last year are the features, although the Pacific and southwestern groups show increases of 10.3 per cent. and 6.2 per cent. respectively. On the other hand, the eastern roads return a decrease of 51.8 per cent. and the southern lines one of 17.6 per cent., while the trunk lines show a loss of 13.8 per cent. The hard-coal and central-western roads contribute losses that are identical in ratio—9.5 per cent. for each. The northwestern lines display a decrease of 7.2 per cent.

The swings in gross and net earnings for fourteen months back are shown in the following table:

	Per cent. inc. Gross	Net
	1907	1907
January	8.2	*2.4
February	7.7	*5.9
	1906	1906
January	20.3	44.0
February	26.8	70.9
March	12.0	14.0
April	5.2	4.3
May	9.3	11.8
June	11.0	13.0
July	13.1	17.1
August	12.5	11.9
September	8.0	5.0
October	11.3	9.7
November	7.2	3.2
December	8.9	2.0

* Decrease.

Something in the nature of a sidelight is thrown on the situation as regards net earnings by the following exhibit, in which we show the percentage of change scored in the net receipts of some leading roads for February, 1907, as compared with 1906, and February, 1906, as contrasted with that month in 1905:

	Net dec. 1907 from 1906	*Net inc. 1906 over* 1905
Rock Island	*18.4	665.9
Illinois Central	13.5	108.8
Wabash	*26.4	9710.2
Baltimore & Ohio	21.9	43.9
Erie	7.0	375.6
Philadelphia, Baltimore & Washington	59.8	89.7
Central of New Jersey	6.7	20.9
Reading	13.1	4.3
Louisville & Nashville	5.1	8.1
Southern	81.5	49.3
Atchison, Topeka & Santa Fe	11.0	132.4
St. Louis & San Francisco	*20.4	198.8
Missouri Pacific	*20.5	240.1
Canadian Pacific	48.4	299.0
Southern Pacific	*57.0	44.7
Union Pacific	2.8	21.2
Pennsylvania, east of Pittsburgh and Erie	13.3	92.0

* Increase.

Leading individual increases in gross earnings for February this year, as compared with February last year, are shown in the appended table:

Southern Pacific	$2,055,254
Pennsylvania system	1,181,300
St. Louis & San Francisco	700,275
Rock Island	656,358
Atchison, Topeka & Santa Fe	640,357
Missouri, Kansas & Texas	359,518
Union Pacific	324,890
Louisville & Nashville	296,191
Pittsburgh, Cincinnati, Chicago & St. Louis	236,445
Norfolk & Western	205,158
Missouri Pacific	164,420
St. Louis Southwestern	154,917
Chicago & Alton	136,939
Baltimore & Ohio	136,785
Atlantic Coast Line	135,566
Erie	115,226
Nashville, Chattanooga & St. Louis	114,256
Total	7,613,855

The Reading shows the only important decrease in gross earnings—$140,083. Comparatively heavy decreases in net are set forth in the following:

Canadian Pacific	$583,756
Southern Railway	483,212
Baltimore & Ohio	411,991
Atchison, Topeka & Santa Fe	297,055
Pennsylvania system	244,700
Minneapolis, St. Paul & Sault Ste. Marie	198,665
Chesapeake & Ohio	198,312
Illinois Central	187,919
Seaboard Air Line	138,562
Reading	133,769
West Jersey & Seashore	128,100
Atlantic Coast Line	123,683
Canadian Northern	113,900
Philadelphia, Baltimore & Washington	100,560
Total	3,344,124

The more important increases in net earnings are given in the following, it being understood, of course, that comparison is with February, 1906:

Southern Pacific	$1,148,521
St. Louis & San Francisco	221,814
Rock Island	186,400
Missouri Pacific	180,843
Kansas City Southern	131,508
St. Louis Southwestern	125,521
Wabash	101,300
Total	2,095,907

At the moment the outlook for earnings is bright, tonnage continues of large volume, and the railways are moving freight more rapidly, the car congestion having been relieved in many sections, which fact ought to aid the railways in reducing operating expenses.

COTTON SHIPMENTS STILL SWELL EXPORT TRADE

Cotton, as for many months past, continues the largest single feature in the country's export trade, though the proportion of that staple's export to the entire monthly total is naturally smaller than it was some months ago. While cotton exports have gained, other lines reported upon in the preliminary statement show decreases, and were it not for the gain in cotton and a smaller increase in other exports, mostly manufactured goods, an actual decrease in all exports would be shown from a year ago. Imports continue to gain; those for March were, in fact, second only to those of December, 1906, in value, and the gain is relatively greater than that shown in exports. For the nine months' period the gains in cotton and in "other exports" far more than make up for losses in breadstuffs, meats, animals and mineral oils, and the result is that export trade for the fiscal year will be considerably in excess of the record year preceding, while imports will again, undoubtedly, break all records. The imports and exports of merchandise for March and the nine months ending therewith compare with corresponding periods one and two years ago as follows:

March	1905	1906	1907
Imports—Free of duty.	$47,857,024	$50,812,740	$60,839,516
Dutiable	62,574,164	62,784,837	72,483,569
Total	110,431,188	113,597,577	133,323,085
Exports—Domestic	133,970,547	143,360,967	160,585,802
Foreign	3,007,882	2,149,740	2,104,148
Total	136,978,429	145,510,707	162,689,950
Excess of exports	26,547,241	31,913,130	29,366,865
Nine mos. end'g Mar.			
Imports—Free of duty.	393,943,062	411,479,279	482,146,943
Dutiable	445,487,052	502,075,818	583,912,968
Total	839,430,114	913,555,097	1,066,059,911
Exports—Domestic	1,126,287,218	1,324,878,727	1,433,632,648
Foreign	18,752,019	19,023,363	18,272,323
Total	1,145,039,237	1,343,902,090	1,451,904,971
Excess of exports	305,609,123	430,346,993	385,845,060

March exports, it will be seen, exceed those of March a year ago by 11.7 per cent., while imports gain by 17.7 per cent. For nine months the gain in exports is 8 per cent., while the increase in imports is 16.7 per cent. Following will be found the values of shipments of leading products

for March and the nine months, with comparisons for the two preceding years:

March	1907	1906	1905
Breadstuffs	$14,233,462	$15,531,743	$12,631,494
Meats	14,087,239	15,661,905	14,985,316
Animals	3,385,699	3,805,055	3,872,472
Cotton	43,392,647	26,832,841	28,476,974
Mineral oils	6,476,676	7,917,995	7,528,178
Total above	82,475,723	69,749,539	67,494,434
Other exports	80,214,227	75,761,168	69,483,995
Total all exports	162,689,950	145,510,707	136,978,429
Nine months	1907	1906	1905
Breadstuffs	$131,203,895	$146,268,959	$75,688,902
Meats	135,891,019	144,324,993	112,054,164
Animals	24,774,285	29,887,250	30,790,589
Cotton	413,228,845	333,942,156	305,430,892
Mineral oils	58,983,144	60,578,840	57,997,636
Total above	764,081,398	715,002,198	581,962,183
Other exports	687,823,573	628,899,892	563,077,054
Total all exports	1,451,904,971	1,343,902,090	1,145,039,237

The March totals of exports show decreases from a year ago of 8.4 per cent. in breadstuffs, 3.9 per cent. in meats, 11 per cent. in animals and 18 per cent. in mineral oils. Against this there was a gain of 61 per cent. in cotton and of 5.9 per cent. in all other exports. Further details of the particulars of exports will be found in the following tables, which show the exports of meats and dairy products during March and the nine months ending with that month:

MARCH.

	Quantities		*Values*	
	1907	1906	1907	1906

Total	863,601,885	907,646,173	58,983,444	60,578,840

Cotton exports for the periods set forth were as follows:

MARCH.	*Bales*	*Pounds*	*Values*
1907	769,086	398,838,922	$43,392,647
1906	478,892	244,986,152	26,832,841
NINE MONTHS.			
1906-07	7,534,686	3,913,706,041	413,228,845
1905-06	5,869,424	3,031,023,188	333,942,156
1904-05	6,572,451	3,395,155,191	305,430,892

The average export price per pound of cotton in March was 10.9 cents, as compared with 11 cents in March, 1906. For the seven months ending with March the price was 10.6 cents, against 11.1 cents for the corresponding period in the preceding year.

Aside from the increase in cotton here shown, it might be noted that the export of wheat in the form of grain is the only line showing important gains for nine months. Corn shows a heavy falling off and flour a small decrease, despite a slightly larger movement in quantity. All kinds of mineral-oil exports show decreases. Exports of animals show a large decrease. Those of meats are irregular. Fresh beef gains slightly, while canned-beef shipments are less than a fourth of those for the preceding year. Bacon and lard shipments are smaller, while those of hams and pork are larger. Butter shipments are smaller, while those of cheese are larger.

INSECT DAMAGE IN OKLAHOMA.

Oklahoma, April 12.—Conservative reports collected from numerous authorities show that the present outlook for wheat in the state of Oklahoma is far below the average. To a great extent this is due to a species of parasite known as the "green bug," which has damaged the wheat crop to a considerable extent. The section in which the ravages have been felt the most is in a continuous line leading from Pawnee county directly across the state to Greer county. The counties reported to have received the worst damage are Pawnee, Noble, Payne, Kingfisher, Logan, Lincoln, Oklahoma, Canadian, Cleveland, Blaine, Caddo, Washita, Kiowa, Comanche and Greer, and the Chickasaw Nation.

Numerous trade authorities report cancellations of contracts for harvesting machinery and threshers. A traveling representative of one of the large threshing-machine agencies in this city reports that large areas of wheat are being plowed under in Greer and Kiowa counties and the land devoted to other grains. In some cases cotton has been planted instead. In the immediate vicinity of Oklahoma city the wheat lands have suffered much where the surface is low-lying, and the ravages are marked to the casual observer by spots of yellow wheat, and even spots that are entirely devoid of vegetation. It is reported that the country immediately surrounding El Reno has been touched by the pest, but not to exceed 15 per cent. damage has been done. While the country around Weatherford has suffered to some extent, it is reported that owing to an increased acreage over last year the yield may be on a par with that of 1906.

While the outlook for the harvester and thresher machinery trades is not glowing at present, the opinion seems to prevail among conservative business men that the ravages of this pest will not be felt except in sporadic cases, and then not in quite as disastrous a way as now thought by those business men, who have been most affected. It is thought that possibly opinions of harvester and threshing machinery companies have been biased to a large extent through wheat growers desiring to be on the safe side. This parasite appears to have come from Texas, and the worst ravages are confined to the southern part of Oklahoma and a portion of the Indian Territory. With the exception of this particular trouble, all other crops show signs of being on an average with other years. The prevailing question in the districts affected is reported to be, "At what stage will the wheat be safe from the attacks of this parasite?" But this question cannot be definitely settled as yet. S.

[Our correspondent advises us by telegraph, under date of April 18, that in southern Oklahoma the green bug has about disappeared from wheat, but is still working in oats. In northwestern Oklahoma bugs are still doing considerable injury, and the total damage to Oklahoma wheat crop to date is estimated at 30 per cent. Rain in the immediate future would be beneficial.—Editor BRADSTREET'S.]

EDITORIAL NOTES.

Reform of the second-class mail privilege, that referring to papers and periodicals, has been advocated in this country for some years, the claim being that a great saving in revenues would be possible. Any movement of this sort has been strenuously fought and so far has failed of success. This matter has, however, been a subject of agitation in other countries, which have hitherto been content to follow our policy, and Canada has apparently taken a step which will limit the operation of our laws so far as they relate to the carriage of such matter through Canada. As a result of an agreement reached by the postal authorities of the two countries on April 1, Section C of Article A of the Postal Convention of 1888 has been amended so that matter originating in either country, destined for delivery in the other, will hereafter be charged for at the rate of 1 cent for each four ounces, instead of the 1-cent-per-pound rate formerly charged. Postmaster-General Meyer has, therefore, ordered that, commencing on May 8, 1907, the postage rate applicable in the United States to second-class matter addressed for delivery in Canada shall be 1 cent for each four ounces or fraction thereof, calculated on the weight of each package, and prepaid by means of postage stamps affixed. Under this order it will therefore be necessary to keep copies of second-class publications for Canada separate from those mailed at the pound rate of postage, and to see that postage stamps sufficient to fully prepay the rate stated above are affixed to each package which contains several copies for one post office, or to each separately addressed copy not inclosed in a bulk package.

Among the other reports which have in the past fortnight exercised somewhat of a disturbing effect upon the stock market was one that the Union Pacific Railroad, or its affiliated concerns, would join the ranks of the companies which were issuing short-term notes. In this case, however, the reports have not found any credence in well-informed circles, and the denials on the part of the management have been taken at their face value, something which is rather rare in such cases. It is pointed out that the position of the Union Pacific is, in fact, so strong financially that it is one of the few railway organizations in the country which at the present time can command abundant resources with which to finance its requirements for construction and extension work, or for providing new equipment, without having to go into the market to sell either bonds or short-term notes. It is true, of course, that there has been a considerable shrinkage in the market value of the securities which Mr. Harriman acquired on behalf of the Union Pacific with the proceeds of the sales of the Great Northern and Northern Pacific stocks, which were acquired by the company in connection with the ill-fated Northern Securities organization. On the other hand, taking the Union Pacific's annual report for the year ending June 30, 1906, it had at that date $21,000,000 of cash on hand, $34,000,000 of demand loans, and net cash assets approximating nearly $100,000,000. Under such circumstances it would be entirely unreasonable to suppose that the Union Pacific management would be under the slightest necessity of entering the money market as a seller of new securities, the course of its management's policy in regard to the much criticised investments being in this respect a fortunate one for its stockholders.

Improving conditions continue to display themselves in the money markets abroad. The Bank of England, it is true, did not make a further reduction in its 4½ per cent. discount rate this week, as there had been hopes might be its course. This, however, was fully explained by the fact that Paris shows a disposition to take back funds which were placed in London during last autumn and winter, it being intimated, in fact, that the Bank of France is gradually withdrawing the £3,000,000 of gold which it surrendered to the Bank of England when the pressure upon the London market was most severe. On the other hand, the Bank of England is at present able to secure practically all the new gold which comes in from South Africa, and with the relief from fears of a specie drain to New York, the London market is not disturbed by the above tendencies on the part of Paris. In fact, the withdrawal of French capital from the British loan market is a natural result of the lower rates of interests quoted at London, and is of one piece with the action of interior banks throughout the United States, which during the past fortnight, as is mentioned elsewhere, have taken large amounts of money out of the New York loan market which they had employed there as long as high rates of interest could be obtained for the same, but which are promptly withdrawn, now that call loans in Wall street have fallen to about a 2½ per cent. basis. Included in the favorable indications in the foreign situation were a favorable weekly statement by the Bank of Germany and the assurance that a new $100,000,000 loan of the Prussian government, which has just been announced, will be a success. As a further significant example of the financial tendencies abroad, it may be noted that a £5,000,000 bond issue by the London County Council was oversubscribed twenty times.

RECENT LEGAL DECISIONS.

[*Prepared for* BRADSTREET'S.]

Taxation—Labor—Highways.

The Supreme Court of North Carolina held, in the case of State vs. Wheeler, that requiring labor for the working of highways was not taxation.

Inheritance Tax—Will—Directions.

The Supreme Court of the United States upheld, in the case of Chanler vs. Kelsey et al., the decisions of the New York state courts sustaining the action of the comptroller in assessing for taxation certain property devised by a decedent under directions given by her father before his death.

Carrier—Liability—Baggage.

A railway carrier is not as a matter of law liable only as a gratuitous bailee of baggage which it has regularly checked if the passenger does not go on the same train with it, according to the decision of the Supreme Court of Minnesota in the case of McKibbin vs. Wisconsin Central Railway Company.

Mechanics' Lien—Sureties.

The Appellate Division of the New York Supreme Court held, in the case of Pierce et al. vs. American Bonding Company of Baltimore, that where a mechanics' lien is bonded before suit it is not necessary to apply for leave to sue the sureties, under section 814 of the Code of Civil Procedure, in order to join the parties defendant in an action under the statute to enforce the law.

Insurance—Death—Poisoning.

The Supreme Court of Wisconsin held, in the case of Cary vs. Preferred Accident Insurance Company, that a provision in an insurance policy exempting the insurer from liability for death resulting from poison or infection does not apply where an accidental abrasion of the skin is followed by bacterial infection, blood poisoning and death, since the infection was held not to be the proximate cause of the death.

Insurance—Contract—Physician.

The Supreme Court of Minnesota held, in the case of The Physicians' Defense Company vs. O'Brien, as Insurance Commissioner, that a contract by which a corporation, in consideration of a stipulated sum, agreed to defend a physician against all suits for damages for malpractice at its own expense, not exceeding a fixed amount, but not to pay any judgment obtained against the physician, was a contract of insurance, and that the corporation making such contract was engaged in the business of insurance.

Telegram—Error—Sickness.

The Supreme Court of Iowa held, in the case of Bowyer vs. Western Union Telegraph Company, that one who undertook a journey because of a telegram erroneously delivered to him announcing sickness, had no right to hold the telegraph company liable for the expense thereof, where the sick person proved to be a stranger to him, and where the name of the addressee of the telegram, although similar to, was not identical with his, and he did not believe he had a relative such as the one stated in the telegram at the place from which it was sent.

Right of Publishing—Criticising Courts.

The Supreme Court of the United States sustained, in the case of Patterson vs. The People of Colorado, the decision of the Supreme Court of the latter state in holding the appellant, the principal owner of two Denver papers, responsible for strictures upon decisions of the Supreme Court of the state published in those newspapers. Mr. Justice Holmes said in his opinion: "When a case is finished courts are subject to the same criticism as other people, but the propriety and necessity of preventing interference with the courts of justice by premature statement, argument or intimidation, hardly can be denied."

Bankruptcy—Liens—Evidence.

The United States Circuit Court of Appeals for the Sixth Circuit held, in the case of The Union Trust Company vs. Bulkeley, that a parol assignment by a man in business of the accounts and bills receivable which he should acquire in the course of such business to secure a person for becoming his indorser, to enable him to raise money for use in the business, created a valid lien as against the assignor's trustee in bankruptcy where the assignment was made in good faith, although no notice of the same was given to creditors, and the notes and accounts remained in the possession of the assignor since his bankruptcy. The court further held that a parol assignment of choses in action as security by a bankrupt prior to the bankruptcy might be established by the testimony of the parties alone where such testimony was uncontradicted and credible, the witnesses not being impeached and there being no circumstances casting doubt upon their truthfulness.

Insurance—Sale—Assignment.

The Kentucky Court of Appeals held, in the case of The Continental Fire Insurance Company vs. Thurston et al., that where on the sale of a house the owner thereof assigned his insurance policy thereon to the purchaser, who assumed to pay the installment notes as they matured, and such transfer was made by the advice and approval of the local agent of the company, such assignment was valid, although the agent had no authority to consent to such assignment where the parties to the assignment had no knowledge of any such restrictions on the authority of the agent.

Railroad—Rebates—Officials—Fines.

The United States Circuit Court of Appeals at Chicago has affirmed the conviction in the District Court of the Chicago & Alton Railroad and of Messrs. Faithorn and Wann, former officials of the road, for granting rebates. The defendants were charged with having paid rebates to a large packing company under the guise of "refund of terminal charges," the amount paid being $1 on each car for the use of the tracks of the packing company in getting the cars of freight out from the packing house to the main line of the Chicago & Alton. The railroad was fined $40,000 and the officials $10,000 each.

Railroad—Bridge—Toll—Franchise.

The Supreme Court of Illinois held, in the case of People ex rel. Anton vs. Atchison, Topeka & Santa Fe Railway Company, that a bridge owned by a railroad company and used mainly for railroad purposes, although roadways for wagons are attached to the bridge by brackets and toll is charged for the use of such roadways, is properly classed in its entirely as railroad track, and that when it is so assessed by a state board, any attempt by the local authorities to tax the easement in the bridge and the support furnished by it and its piers to the roadways is to that extent an attempt to tax what has already been assessed and taxed. The court further held that the right of a railroad corporation to operate a toll bridge and take tolls is a franchise which the local assessor or board of review has no power to assess for taxation.

Interstate Commerce—Steamboats.

The Kentucky Court of Appeals held, in the case of The Ryman Steamboat Line Company vs. The Commonwealth, that a corporation operating a line of steamboats on the Cumberland and Ohio rivers from Nashville, Tenn., to Evansville, Ind., which stop at points in Livingston county, Kentucky, was not subject to indictment in the latter county, under section 571 of the Kentucky Statutes, for "carrying on business in this state without filing a statement with the secretary of state, giving the location of its place of business and the name of its agent thereat upon whom process can be served," for the reason that the corporation was engaged in the business of interstate commerce, and that under section 8 of article 1 of the Constitution of the United States, Congress has the exclusive power to regulate commerce with foreign nations and among the several states.

Municipality—Dwelling—Liability.

The Kentucky Court of Appeals held, in the case of Hutchinson vs. City of Maysville, that in an action by the owner of a dwelling house against a city for damages thereto by the increased flow of water thereon, filling his cistern, cellar, coal house and privy vaults, and making the premises damp and unhealthy by reason of the city's digging ditches, constructing culverts and grading streets, it was error of the court to instruct the jury that "the measure of damages, if any, is the difference between the value of plaintiff's property before the injury complained of and its value immediately after said injuries." In such a case, the court said, the measure of damages was the depreciation of the rental value of the property if it was rented, or if it was occupied by the owner, the diminution in value of its use and occupancy, and the time and money expended, if any, in cleaning out the cistern and cellar and repairing the property after each flood, so as to make it habitable.

BUSINESS NOTES.

Earnings of Electric Railways.

The *Financial Chronicle* has compiled some interesting data regarding the earnings of electric railway properties. In its last issue it gave the gross earnings of 181 roads for the calendar-year period, those of eighty-five roads for the year ending September 30, together with figures of 202 roads for the year ending June 30. The entire returns are epitomized in the following tabulation:

Gross	1906	1905
Calendar year, 181 roads	$215,153,525	$192,672,458
Year ending Sept. 30, 85 roads	23,708,187	21,903,055
Year ending June 30, 202 roads	61,705,741	55,020,038
Total, 468 roads	300,567,453	269,595,551
Net	1906	1905
Calendar year, 181 roads	$92,442,309	$82,873,597
Year ending Sept. 30, 85 roads	6,798,100	6,362,720
Year ending June 30, 202 roads	27,339,786	24,787,759
Total, 468 roads	126,580,195	114,024,076

It will be seen that gross receipts for 1906 increased $30,971,902 over those of 1905, while net revenue advanced $12,556,119, the respective ratios of gain being 11.4 per cent. and 11 per cent. On the basis of the above showing operating expenses in 1906 aggregated $173,987,258, the gain over the preceding year being no less than 11.6 per cent. Therefore, the traction properties, like the steam roads, feel the burdens imposed by the increased cost of labor and supplies in general.

Railroads and the Waterways.

"The serious proposition to develop waterways in the United States on a large scale for the purpose of relieving the railways of congestion in freight traffic does not take account of the increased capacity to which existing railway lines can be worked," says the *Railway Age*. "There are few if any lines in the west which, if double-tracked, would be worked to full capacity by steam locomotives in ordinary times, and the same mileage could have its capacity largely increased by the use of electricity as the motive power. The speed, which now averages twelve to fifteen miles per hour, could be increased to twenty-five or thirty, and this would double the capacity of present mileage so far as train movement is concerned. The weight of trains now operated by large steam locomotives could be largely increased by the use of electric locomotives, and by operating heavier trains at higher speed the electrification of existing tracks would make it possible to obtain a capacity three or four times that now realized. The plans for additional trackage and new waterways in the United States should be considered in a broad manner, and the expense for such improvements might be found in many cases greater than the cost of sufficient electrification to produce an equivalent result."

The Copper Market.

According to the *Engineering and Mining Journal*, "the situation in copper is decidedly reminiscent of January and February, 1906, although there are important differences. At the end of 1905 the price for electrolytic copper had risen as high as 19 cents per pound. In January, 1906, there was a slackening in demand and a recession in the price, which at first was conceded by the largest selling interests, but when the price reached 18 5-16 cents these interests withdrew from the market and held their copper firmly at 18½ cents, delivered, thirty days. In the meanwhile outside interests continued to sell copper, and the price declined to about 17⅝@17⅞ cents. About the end of February an active demand set in and the price rose quickly to the asking price of the large interests which had been holding aloof. The similarity in the present situation is that in March the price went to 25⅝ cents for some lots. There was then a recession, which at first was admitted, but after a while the same interests which upheld the market in 1906 decided to make a stand at 25 cents (25¼ cents, delivered, thirty days). In the meanwhile other interests have offered copper much lower, and sales have been made between 24 and 25 cents, although their volume has not been large. The recession has been due, of course, to the absence of buyers, who provided for consumption up to June 30, but it is equally true that for many months past they have been buying a long way ahead, and their present cessation must have a cause. Unquestionably the cause has been partly the tremendous decline in the London market for standard copper, irrespective as to what may have been the causes for that decline. The price at London cannot remain on the basis of 20 cents for standard, and a level of 24 to 25 cents be maintained at New York, because at such disparity American refiners can buy in London, then import and sell cheaper than our current quotation. If the decline at London be due merely to manipulation, buying for consumption will quickly elevate the price again. It is the fact that such has not yet occurred which causes American consumers to be cautious. Another ground for caution is possibly a falling off in the demand for manufactured copper, as to which, however, there is great difference in opinion. It is the latter which creates the uncertainty as to the future. If there be no falling off in business, the demand for consumption, as soon as confidence is restored, will put prices back to where they were a month ago. If, on the other hand, there is being actually a contraction in business, the asking price of 25 cents per pound cannot long be maintained. It is therefore a question now, as it was in the early part of 1906, as to who is correctly interpreting the prospects of business in general. It is not too optimistic to say that the outlook is in no way gloomy."

Investments in Mexican Mines.

The following information concerning mines and mining in Mexico and the direct interests of Americans therein is furnished by Consul-General Alfred L. M. Gottschalk, of the City of Mexico: According to the best private authority, a conservative estimate of the American capital brought into Mexico since 1902 and invested in mining and smelting ventures amounts to about $125,000,000 gold. This figure may materially increase the general estimate of American investment in Mexico, which was estimated some little time ago at $750,000,000 gold value. The following is an approximate investment of American capital in mining and smelting in the states mentioned since 1902:

Aguascalientes	$3,000,000	Puebla	$5,000,000
Chiapas	1,000,000	Queretaro	1,000,000
Guerrero	5,000,000	Tabasco	1,000,000
Guanajuato	12,000,000	Tamaulipas	1,000,000
Hidalgo	5,000,000	Veracruz	1,000,000
Jalisco	10,000,000	Zacatecas	5,000,000
Michoacan	2,000,000		
Mexico	2,000,000	Total	64,000,000
Oaxaca	10,000,000		

It is also stated that in the states of Sinaloa, Sonora, Coahuila, Durango and Nuevo Leon at least $60,000,000 of American capital has entered within the last five years. This consulate-general recently referred to the liberality of the present Mexican mining laws and to the fact that an effort would soon be made to improve without restricting them. A comparatively large number of American mining enterprises have neglected to comply with the requirements of the Mexican law in regard to incorporating in the republic. This omission is probably caused by a desire to avoid the payment of the Mexican stamp tax, which is based upon a percentage charge of the amount of the corporation's investment.

Concerning Fuel Resources.

"Of all problems which confront us in the concentration of modern industries, it is the conservation of natural resources, and especially the preservation of our irreplacable fuel supply, which we must deem by far the most important," says the *Iron Trade Review*. "For just as the rising curve of iron production is indicative of the growing industrial prosperity of a nation, so is the output and consumption of coal inseparably allied in magnitude to the course of the former. The preservation of permanence of our fuel resources by economic methods of utilization, both of the ordinary grades of coal, as bituminous and anthracite, and especially of the inferior classes, such as lignite, peat, mine culm, etc., which were formerly wasted, is essential both for the maintenance of stability of modern industry and for the life and prosperity of future generations. It also is an instrument and measure of political prudence or precaution for every progressive nation, even when the economics of a rich country like America are concerned, not so much on account of an impending depletion of its coal fields, but on account of the extreme value they possess for the future industrial activities. It may be objected that the sources of fuel supply have not yet been accurately measured up the world over, and that the centers of production may, in times to come, be found in countries that are now quite undistinguished in industrial annals, and which may, perhaps, pass beyond our control entirely. Yet every objection is subordinate to the utilitarian idea that America, owing to its abundant and comparatively virgin resources, will sooner or later become an important seller of coal to the older European countries, which are becoming rapidly impoverished, since with the growing shrinkage, their remaining store cannot keep pace with the rising demand for very long."

CURRENT BUSINESS NEWS.

Commercial.

This table, taken from the London *Economist*, shows by index numbers the direction in which British commodity prices have tended:

End of	*Index No.*	*End of*	*Index No.*
March, 1907	2516	March, 1906	2306
February, 1907	2521	December, 1905	2342
January, 1907	2494	June, 1905	2163
December, 1906	2499	December, 1904	2136
November, 1906	2501	June, 1904	2130
October, 1906	2458	December, 1903	2197
September, 1906	2355	December, 1902	2003
June, 1906	2362		

The movement, it will be observed, is similar to that displayed by domestic prices.

Reports received early in the week said that abundant rains in northern and central Spain had relieved the agricultural situation. The country people had been in great distress owing to drought persisting for weeks and threatening the destruction of the green crops as well as injury to fruit and vines.

Platinum, which bounded up in price several times last year and kept on the upward movement the first three months of this year, began two weeks ago a turn the other way, and since then has fallen $4 an ounce, going down from $38 to $34 Refiners say that there is a likelihood of a further decline. The makers of diamond jewelry, photographic, dental and electric supplies are breathing easier. It was said several months ago that the Russian government, which controls the mines in the Ural mountains, where most of the platinum is found, was restricting the output. The reason for the reaction in the price of platinum is due to financial conditions in Europe. It is said that European holders of the metal who were keeping it in stock pledged it as collateral security on loans, and these loans were recently called.

Foreign crop conditions as published Tuesday in Broomhall's Liverpool *Corn Trade News:* United Kingdom, France and Italy—Crop prospects are generally favorable. Germany—The weather is favorable for seeding, but too cold, however, to promote growth. Native wheat is very scarce. Roumania and Bulgaria—The weather conditions are unfavorable for seeding, which is very backward. There are no complaints heard regarding the winter-wheat crop. Turkey—Rains have fallen, which have been beneficial for the crop. Russia—In the southwest the weather is colder, and this, together with the high winds, have caused some damage to the weak plant. Elsewhere there are no complaints. Supplies are small. Spain—In the south the rains have been insufficient; elsewhere they have been abundant, and crop conditions have improved. North Africa—Some provinces are suffering as a result of drought. India—The weather is wet and the crop outlook is less favorable.

An Ottawa dispatch to the Toronto *Globe* reports that "the trade returns of the Dominion for the last fiscal year indicate that the increase in Canada's trade with the United States has been considerably more than double the increase in her trade with Great Britain." Canada has changed her system and now makes March 31, instead of June 30, the end of the fiscal year. The trade returns for the full year are not yet completed, but the statement for the eleven months ended with February 28 shows an increase in imports from Great Britain to the amount of $13,640,512 over the returns for the corresponding term of the year preceding, while the increase in purchases from the United States was $31,654,696. A similar condition is shown in the export account. Canada's sales to Great Britain during that term were increased by $9,024,030, while sales to this country were increased by $18,309,336. The total increase in commerce, both import and export, was $22,664,542 with Great Britain and $49,964,032 with the United States.

Preliminary estimates issued by the Treasury Department of Cuba place the probable production of sugar in the island during the season of 1906-07 at 1,225,799 tons of 2,240 pounds.

The Minister of Finance of France has issued a decree applying the maximum tariff to coffees from Porto Rico and also those from United States ports after June 30. Hitherto the minimum tariff has been applied, under the convention of 1901.

Financial.

The Fourteenth Street Bank, one of the most prominent of the state banks in New York City, has been admitted to the Clearing House. The bank was organized in 1888. It has cleared through the National Bank of North America. A few months ago the capital of the bank was increased from $500,000 to $1,000,000. It has a surplus of $350,000 and undivided profits of about $50,000. In accordance with the Clearing House regulation the bank will henceforth maintain a reserve of 25 per cent. The reserve last week was 18.7 per cent.

The directors of the American Pneumatic Service Company have voted "that on account of the increased business of the company in acquiring and completing valuable contracts, we believe that it is to the best interest of the stockholders that no dividend be declared on the preferred stock of the company at this time." The company has paid at the rate of 6 per cent. per annum on this issue from October, 1889, to January, 1902. It was suspended at the latter date and resumed in March, 1906. The directors have had under consideration for several months an important business authorized under the charter of the company and decided upon a plan to carry the same into effect.

It was reported Tuesday that a New York Stock Exchange seat had sold for $78,500. This is an advance of $3,500 over the last sale price, but is much below the record price, $95,000.

Circuit Judge Allen, of St. Louis, in a decision dismissing a claim, held that the buying and selling of stocks and bonds on margins constitutes a gambling transaction.

The stockholders of the Coney Island & Brooklyn Railroad Company have voted to increase its capital stock from $2,000,000 to $3,500,000. Of this amount $1,000,000 is to be sold at once and $500,000 is to be held in reserve.

At the annual meeting of stockholders of the United States Steel Corporation, Monday, in Hoboken, the contract entered into with the Great Northern Railway for its ore lands came up for discussion, and the stockholders ratified the contract. It can be terminated on January 1, 1915, at the option of the Steel Corporation. The following directors whose terms had expired were reëlected: E. C. Converse, E. H. Gary, chairman; James Gayley, J. P. Morgan, Thomas Morrison, G. W. Perkins, Henry Phipps and H. H. Rogers. The directors meet for election of officers April 30.

At the next regular meeting of the New York Clearing House Association the following resolutions will be presented for action: "Resolved: Foreign checks on which are now printed 'payable at National Bank, New York,' and are now being cleared by New York Clearing House banks shall not be cleared after adoption of this resolution unless they are certified by the local bank in the city from which they emanate; Resolved: Any institution clearing through a member of New York Clearing House must maintain an amount in its own vaults equal to 25 per cent. of its net deposits." The first resolution will require a certification by the local banks at the interior for payment at their New York correspondents, and the second resolution will require non-member bankers to keep 25 per cent. of the net deposits in addition to their deposits with their Clearing House agents for payment of checks cleared.

The issue of $50,000,000 in German Imperial and $50,000,000 in Prussian Treasury bills was announced Wednesday. The bills bear 4 per cent. interest and are redeemable in five years. The two governments would have preferred to have issued 4 per cent. convertible loans, at 3½ per cent., to run five or six years, but the bankers prevailed on the governments to issue bills instead, arguing that the latter would find a readier market abroad.

At a meeting Tuesday of the stockholders of the National Copper Bank, which is to be opened for business in the Trinity Building about May 1, these directors were elected: W. A. Paine, F. L. Ames, C. F. Brooker, F. W. Roebling, R. C. Pruyn, H. H. Rogers, Jr., Adolph Lewisohn, James Jourdan, H. O. Havemeyer, Jr., J. M. Beck, J. C. Bishop, G. R. Sheldon, R. M. Stuart Wortley and C. H. Sabin. The officers are Charles H. Sabin, president; John D. Ryan, Thomas F. Cole and Urban H. Broughton, vice-presidents; Walter F. Albertsen, cashier, and Joseph S. House, assistant cashier.

On Tuesday the directors of the Bethlehem Steel Corporation discontinued the payment of dividends on the preferred stock. The company paid its initial dividend on the preferred six months after its organization and continued payments at 7 per cent. a year until last fall, when the rate was cut to 3 per cent. Two quarterly dividends at the latter rate have been paid.

Vice-Chancellor Bergen, of New Jersey, has decided the suit against the American Writing Paper Company, involving the payment of the dividend on the preferred stock, in favor of the company and sustains the payment of the dividend. In other words, the decision sustains the demurrer made by the company to the plaintiff's complaint, and establishes the legality of the dividend of $1 a share declared by the directors on October 2 on the $12,500,000 of the preferred stock.

Governor Stokes, of New Jersey, has signed the law prohibiting insurance companies from making campaign contributions. Other laws provide that no life-insurance company issuing participating policies shall pay dividends aggregating more than 10 per cent. of the par value of its stock in any year; that no domestic company shall have stock of a greater par value than $2,000,000, and that upon dissolution the stockholders shall have not more than twice the par value of their stock, except where the company has now accumulated a surplus equal to at least twice the amount of its stock.

Railroads.

C. M. Hayes, vice-president of the Grank Trunk, is back from England, where he placed $5,000,000 worth of debentures at 4 per cent., when many other corporations pay 5 per cent. Seventy per cent. of these debentures had been taken up by old shareholders, he said. The intention is to put the money into rolling stock and improve that as much as possible. The Grand Trunk is now using 2,500 cars which will gradually be turned over to the Grand Trunk Pacific. The line between London and Highland Park will be double tracked at once. After that the entire line from Montreal to Chicago will be double tracked.

It is announced that Russia is experimenting with the Horary railroad time-table system, whereby the hours of the day are numbered from one to twenty-four, instead of one to twelve and one to twelve over again. Travelers in Italy, where the system has been in use in railway time-tables for some years, say that it simplifies things and does away with annoying uncertainties as to whether hours given are "a. m." or "p. m."

It is reported that the Kansas City Southern has secured most of the rights of way and has done much of the grading on a line which will give the system an entrance into New Orleans. The route runs from Leesville, La., to New Orleans, about 250 miles. On its completion the Kansas City Southern will have a line about 920 miles long between Kansas City and New Orleans.

The Baltimore & Ohio Railroad Company has secured an order in the United States Circuit Court in Chicago giving it the right to assume the bonded indebtedness of the Chicago Terminal Transfer Railroad Company of $15,140 000, on condition that the order did not prejudice the right of the stockholders to attack the validity of the lease which the Baltimore & Ohio now enjoys for terminal facilities in Chicago.

Industrial.

It is estimated that the output of the Lake Superior iron mines this season will approximate about 42,000,000 tons. Of this 27,000,000 tons will be credited to the Mesaba, 5,250,000 tons to the Menominee, 4,250,000 tons to the Marquette, 3,750,000 to the Gogebic and 1,750,000 to the Vermilion range. The season bids fair to be the most prosperous and the output the largest in the history of the iron industry in that region. The big lake carriers are already going into commission.

Details of the production of virgin spelter in 1906 and 1905 are shown in the following figures, being in tons of 2,000 pounds:

	1905	1906
Colorado	6,599	6,260
Illinois	45,357	48,238
Kansas	114,948	129,741
Missouri	11,800	11,688
South and east	23,044	30,167
Total	201,748	225,494

Henry R. Merton & Co., of London, place the copper output of the world in 1906 at 711,675 long tons, against 682,125 long tons in 1905, the increase being scarcely 4½ per cent. Among the principal copper-producing countries, Australasia, Canada, Japan, Russia and Spain-Portugal showed important increases in 1906. Chile, Mexico and Germany showed decreases. Aron Hirsch & Son, of Halberstadt, Germany, have reported the copper production of the world as 736,711 metric tons in 1906, while James Lewis & Son, of Liverpool, in the earliest estimate published, reported 730,000 long tons.

A large portion of the independent steel and iron trade is much interested over the recent report that the United States Steel Corporation has begun a new policy by which its capacity for making raw steel and iron will be vastly increased over its finishing mill capacity. In other words, the idea had been gradually evolved that the competition

Wm. A. Read & Co.

INVESTMENT SECURITIES

25 Nassau Street, New York

BOSTON CHICAGO BALTIMORE

that has been constantly springing up in the steel trade since the formation of the corporation has in the main been due to the inability of the corporation to supply independents with raw material.

According to the New York *Sun*, there is now on the books of manufacturers for the railroad interest orders to the amount of $200,000,000. Forty-six railroad material manufacturing corporations represented in the New York market state that so far as their business is concerned it is better than during the fore part of last year.

A special investigation made by the New York *Evening Post* regarding the labor situation leads that paper to conclude that skilled or responsible men are scarce in all sections of the country. Even common labor that will work steadily, especially away from the cities, is hard to secure. Farmers report great difficulty in getting steady help except at exorbitant rates.

The United States Steel Corporation has fixed the selling price of rails for the season of 1908 at $28 per ton, the same price as has obtained since 1901. The officials state that, although the price has been fixed earlier this season than usual, it was made at the request of many of the railroad companies which are desirous of securing certain and prompt deliveries.

The following table gives the production of open-hearth steel ingots and castings by states since 1903, in gross tons:

	1903	1904	1905	1906
New England	169,209	195,901	239,282	251,047
N. Y. and N. J.	104,598	165,986	348,072	553,186
Pennsylvania	4,442,730	4,306,498	6,471,818	7,710,949
Illinois	422,919	358,215	617,625	884,472
Ohio	369,349	480,906	687,392	816,483
Other states	321,106	400,660	607,187	754,861
Total	5,829,911	5,908,166	8,971,376	10,970,998

Of the above 10,970,998 tons, 1,321,613 tons were made by the acid process and 9,649,385 tons by the basic process. The production was much larger than in any preceding year, and was only 1,304,255 tons less than the production of 12,275,253 tons of Bessemer steel ingots and castings during the same year. This table gives, in gross tons, the production of open-hearth steel ingots in 1906 by states:

	Basic ingots	*Acid ingots*	*Total*
New Engl'd, N. Y. and N. J.	666,196	48,527	714,723
Pennsylvania	6,581,872	829,079	7,410,951
Illinois, Ohio and other states	2,095,563	36,604	2,132,167
Total	9,343,631	914,210	10,257,841

The following table gives the production of open-hearth steel castings by both the basic and acid processes in 1906 by states, in gross tons:

	Basic castings	*Acid castings*	*Total*
New England, N. Y. and N. J.	38,533	50,977	89,510
Pennsylvania	24,040	275,958	299,998
Illinois, Ohio and other states	243,181	80,468	323,649
Total	305,754	407,403	713,157

Miscellaneous.

An extradition treaty between Great Britain and the republic of Panama was executed Tuesday.

According to the New York *Times*, a fleet of 107 steamers will carry 75,000 pleasure seekers to Europe from New York City in May, June and the first half of July. The fares collected by the steamship companies from these passengers will be in the neighborhood of $7,000,000. Never before has there been such an exodus to Europe as there will be, judging by every indication, this season. The same story is told at the offices of all the companies: "Most of our ships," say the managers, "from May to the middle of July are already sold out. It would be difficult for any one to-day to secure a passage in June, when the heaviest part of this travel takes place, and we have been forced in consequence to refuse to accommodate people on some of the most popular ships."

The total immigration for March, 1907, was 139,118, as against 133,245 for March, 1906, an increase of 5,873. Of the total amount, 111,405 entered through the port of New York. For the seven months ended March, 1907, the total from all nations has been 644,478, as against 542,257 for the same period ended March, 1906, an increase of 102,221. For the seven months ended March, 1905, the total was 533,208.

STATE OF TRADE.

[A Summary of Special Telegrams to BRADSTREET'S.]

Continued cold weather throughout the country delays crop preparation and development, injures fruits, vegetables and cotton and dulls retail trade. Coincidently, orders from and collections by jobbers and wholesalers are affected, but these latter branches of trade feel this relatively less than in other years, because they are still very generally pushed to complete deliveries on earlier orders, and, indeed, have still on their books a large volume of business which they are struggling to complete. Indeed, the one salient feature that stands out clearly revealed is that, despite continued immense activity in all lines of manufacture, the pressure on the producers for deliveries is insistent, the best examples of this being found in the iron and steel and cotton goods lines, which, as a whole, show a rather more firm undertone. Thus sellers of pig iron for the first half are being urgently pushed for deliveries, quotations are very strong, and there is rather more reported doing in foundry grades, which hitherto have been slower to move. In cottons, features are the tendency to mark up quotations of prints, ginghams and sheetings, though drills are accumulating and concessions can be obtained. A noteworthy feature at the country's largest market has been the announcement of the annulment of the usual spring sales in wash fabrics by a leading concern, because there are no surplus stocks to offer. Water navigation has been prevented from opening up as early as in some other years, but it is noted that the railway traffic situation is easier, cars are becoming more plentiful, and the congestion ruling during the past half year is less acute, though still affecting deliveries of lumber, coal, cotton and other products. Railway earnings coutinue to show large gains in gross over the best of previous years, but net earnings, those for February, for instance, are showing decreases from the enormous gains of preceding years. Bank clearings, despite reduced speculation at New York, show a slight increase as a whole from a year ago, and excluding the metropolis, gains are large over this period of 1906. Money is easy on call but is still flowing freely to the country, and country banks in the west are reported buying commercial paper freely, though at full rates. Excluding New York, building is still very active—in excess of a year ago, in fact—and building materials and hardware are in demand. Labor is well employed, strikes are few and wage advances are numerous, but new construction work is reported slowing down, and a more plentiful supply of unskilled labor at lower prices is indicated.

Crop reports are less favorable. The weather the country over is too cold for proper or seasonable growth. Germination is delayed also by lack of rain in places. The winter-wheat situation is still a mixed one. There is a tendency to scale down percentages chargeable to insect damage. Rain or snow in parts of Kansas and Nebraska have helped wheat, but the claim is made by some correspondents that moisture is still insufficient. These two states and Illinois and Missouri send the best reports. Indiana is irregular, but not more than a two-thirds crop is predicted. In Ohio freezing weather stops growth, but may not affect ultimate yield. Seeding is late in the northwest owing to the ground being frozen. Snow still covers North Dakota. The drought has been only partially broken in Texas.

It is far too cool for cotton and arrested growth or killing of the young plants is reported from all over the belt. Scarcity of seed may limit ability to replant. All southern vegetable and fruit crops are reported hurt by frosts. Hail is reported to have killed crops in the neighborhood of Jacksonville, Fla. The area in cotton in the Memphis district will be 10 per cent. less than last year owing to labor scarcity and refusal of factors to finance freely. The Georgia peach crop is reported badly hurt. Supplies of vegetables and fruits in the New Orleans market are reported short.

Wool, usually dull at this date, is specially so this year because western markets are late in opening, owing to buyers and growers being apart. Eastern buyers will not buy unless they see a profit. Mills are well supplied with foreign wools. Cold weather interferes with shearing in the west. Foreign markets are still firm.

Speculation on the leading exchanges is really lifeless. Securities are stagnant, despite easy money, and quotations are steady as a whole. Grain has lost some of the strength of last week. Wheat futures are about a cent off on realizing on the late advance, and rains or snows in the western wheat belt. Corn is ½ cent lower in sympathy, and oats are also slightly lower. Provisions are irregular and lard is lower. Coffee is 15 to 25 points lower on futures and easier for spots. Sugar is slightly higher on raws, on reduced Cuban crop movement and reports of smaller increases in European beet crops than earlier expected. Refined is quieter, following the large recent business, but consumption is large. Cotton is 10 to 15 points higher on poor crop reports and covering by shorts.

Pig-iron markets show a firmer undertone, following the heavy purchases of steel-making irons last week. More interest in foundry iron for last-half delivery has developed, but the volume of business is only fair. Many consumers cling to the impression that prices will have to recede before much business for future delivery is placed. Spot iron, when it is available, commands high prices, and the import movement of foreign iron is expected to continue for some time to come. Some of the over-sea iron now here is being offered at prices below those recently quoted abroad, and of course the quotations are considerably under domestic prices, which explains the appearance of the imported article at points quite distant from the seaports. Demand and specifications for most finished lines are remarkably active. The leading interest has opened its books for steel rails for 1908 delivery, the old quotation of $28 being maintained, and it is said that inquiries aggregate 250,000 tons. Last week a southern concern sold 46,000 tons of open-hearth rails for 1908 delivery at $30 a ton, and for this year's delivery over 30,000 tons were sold this week. Steel billets are very scarce in the central west. Orders for structural steel are fair, and heavy contracts are pending. As illustrating conditions in the wire and wire-goods line, it may be said that orders on the books of the leading interest are four times in excess of those of this time last year. Bar-iron prices are irregular. Scrap is weaker at the west but firmer in the east. Coke is lower, demand being less active. The copper market displays a number of cross currents, with some quotations showing an easier situation, but the larger domestic interests still hold prices firm. Business in the higher grades, lake and electrolytic, is lighter, as buyers and sellers take diametrically opposite views of the price situation. It is probable, however, that quotations on casting grades and remanufactured copper are shaded. Smelters are busy, shipments are heavy, and it is said that some manufacturers of copper wire are requesting that deliveries of ingots be deferred.

The New York stock market is exceedingly inactive. Easy money fails to have an effect, uncertainty about the position of railway and other properties, as a consequence of pending agitation, tending to cause conservatism on all sides. There has been, however, an absence of bearish attacks, and prices show slight rallies after moderate pressure has been applied to them. Bonds are very dull but steady. Foreign exchange is firm at 4.85.70 for demand sterling.

Bank clearings for the week ending April 18 aggregate $3,014,063,000, 1 per cent. under last week, but eight-tenths of 1 per cent. over this week last year. Outside of New York exchanges amount to $1,156,198,000, 2 per cent. above last week and 18.8 per cent. over the corresponding week last year.

Business failures for the week ending April 18 number 167, against 194 last week, 167 in the like week of 1906, 183 in 1905, 199 in 1904 and 152 in 1903.

Wheat, including flour, exports from the United States and Canada for the week ending April 18 aggregated 3,102,467 bushels, against 1,831,105 bushels last week, 1,844,798 bushels this week last year, 1,242,267 bushels in 1905 and 4,118,108 bushels in 1902. For the past forty-two weeks of the fiscal year the exports are 138,985,489 bushels, against 109,351,717 bushels in 1905-06, 51,052,894 bushels in 1904-05 and 208,069,289 bushels in 1901-02. Corn exports for the week are 1,939,622 bushels, against 1,475,719 bushels last week, 1,673,972 bushels a year ago and 2,232,694 bushels in 1905. For the fiscal year to date the exports are 57,999,201 bushels, against 101,373,107 bushels in 1905-06 and 65,277,644 bushels in 1904-05.

IN CANADA.

Unseasonably cold weather affects Canadian retail trade, but wholesalers and jobbers report demand still good and complaints of slow deliveries still general. Water navigation on the lower lakes is open, but on the upper lakes it will not be open until May 1. Large quantities of heavy freight, iron and hardware are going forward. Canadian rail mills have their output sold for the entire year. One contract is for 37,000 tons of 100-pound rails. Ocean navigation at Montreal is expected to open May 1. Toronto reports little improvement in deliveries and higher prices expected for cottons. Stocks of silks and ribbons are very light. Wholesale trade is brisk in Manitoba, but retail is slow, because of bad roads and the backward spring. Collections show little improvement. Industry is active in British Columbia. A strike of coal miners in Alberta affects fuel supplies. Failures for the week number 18, as against 28 last week and 22 in this week a year ago. Clearings for the week aggregate $77,729,000, a decrease of 4 per cent. from last week, but a gain of 20 per cent. over this week a year ago.

CROP REPORTS LESS FAVORABLE.

CHIEF ADVERSE FEATURES ARE COLD WEATHER, DROUGHT AND INSECTS. WINTER WHEAT LEAST AFFECTED. FRUITS, EARLY VEGETABLES AND COTTON SERIOUSLY DAMAGED.

CHICAGO.—The weather has been unfavorable for good crop growth. Lack of sunshine and moisture in the southwest and green bugs have caused apprehension and considerable damage to wheat. The Texas crop is about lost, and the Oklahoma crop has been damaged 30 to 35 per cent. In southern Kansas the injury is 10 per cent. and the state needs rain, recent precipitation being too light. Ohio valley shows slightly reduced prospects. Some injury by bugs and freezing in Missouri, and from freezing in Illinois and other central winter-wheat states. Early-sown oats damaged by freezing, and resowing is necessary. Northwestern seeding delayed by ground being frozen and by cold weather generally.

ST. LOUIS.—The general opinion prevails that the country districts are in most excellent condition and that crop prospects are reasonably good. We continue to hear reports of injury to the winter-wheat crop by the green bug, but these reports are not confirmed by our correspondents in the winter-wheat section. There has been some injury to the crop, due to dry weather and the excessive rains during the winter, but the injury will not exceed 10 per cent.

KANSAS CITY.—Reports show considerable damage has been done to growing wheat in Oklahoma from the green bug, and slight damage from this insect is also reported from southeastern Kansas. Oats have suffered most, and in some sections the ground is being plowed for corn. The Kansas wheat crop has not yet been seriously affected. Late frost has damaged small fruit to some extent.

CINCINNATI.—During the past fortnight freezing temperatures at night and unusually cold weather during the day have prevailed. While these conditions have been unfavorable to agricultural interests, there has been no important impairment of the position representing possibilities of the cereal crops. Growing wheat has not made progress as it would under warmer conditions, but this does not necessarily reflect actual damage, and favorable weather later on would likely bring it out all right. Farm work has been interrupted and there is yet considerable ground to be sown to oats. Plowing for corn has made little progress.

ST. JOSEPH.—Wheat in northern Kansas is in good shape, and in northwestern Missouri conditions are excellent. Rain and snow fell over the entire territory Wednesday and Thursday.

INDIANAPOLIS.—Reports on growing wheat in northern and eastern Indiana are not favorable, recent weather conditions having caused considerable damage. In southern Indiana the crop is said to be in fair condition, though in the lowlands it is practically destroyed. It is said that the crop will not amount to more than 60 per cent. of last year's.

ST. PAUL.—Seeding has begun in southern Minnesota, but not in this locality. Snow still covers the ground in North Dakota.

OMAHA.—Winter wheat is doing well, but prolonged cold weather has materially affected vegetation, and fruit has been damaged considerably by frost.

SIOUX CITY.—The weather is cold. Seeding is about finished.

CHARLESTON.—Growing crops have been injured considerably by extreme cold weather of last week, and replanting will be necessary.

RICHMOND.—Further damage has been done to fruit by cold weather, and planting has also been delayed.

JACKSONVILLE.—Long continued drought which depressed trade has at last been broken by rain, accompanied with disastrous hail, destroying all crops above ground in this section.

ATLANTA.—The peach crop has been damaged 70 per cent. by heavy frost. Cotton, where it was up, was entirely destroyed, necessitating replanting if seed can be obtained, which is scarce.

AUGUSTA.—The fruit crop is reported seriously damaged and the peach crop has been almost entirely destroyed.

MONTGOMERY.—Cold weather the past few days has caused a great deal of damage to cotton, corn and fruit, especially the latter. About half of the cotton was up, all of which was killed and will have to be replanted. It is hard to estimate the damage to fruit, but it will be large.

MEMPHIS.—Recent frost damaged fruit and early vegetables. Corn and cotton were also injured, and in many places replanting is necessary. The cotton acreage is 10 to 15 per cent. less than last year because of lack of labor. Factors are not taking on new accounts.

KNOXVILLE.—The cold snap has done considerable damage to fruits and early vegetables.

LITTLE ROCK.—Planting and growth of cotton and other crops have been considerably retarded by weather conditions.

NEW ORLEANS.—Crops are planted but are not growing properly, owing to lack of moisture, and the temperature has been low throughout this section for the past thirty days. There have been slight showers, but no particular rainfall since planting commenced. Conditions otherwise are excellent, and from indications the acreage of staples is the largest of recent years. Vegetable crops which should now be marketed in abundant quantities are short, and the shipments of strawberries are much below the average.

DALLAS.—Corn and cotton are in fairly satisfactory condition. Rain is needed, but warm weather more so.

FORT WORTH.—Drought continues in this section and rain is badly needed. Corn has begun to suffer.

WACO.—This vicinity has just been blessed with a splendid rain, which insures great activity in all trades and excellent prospects for crops, especially benefiting corn.

SPOKANE. — The winter-wheat situation remains promising.

TRADE REPORTS.

At New York activity continues in all parts of the dry-goods business, cottons still being in most demand. Both cotton and worsted yarns are in increasing request, but manufacturers complain of a scarcity of raw material. Raw silk is inactive. The unseasonable weather of the past week has not materially interfered with the retail millinery business, which is active. Imported straw braids are in brisk demand, which is in excess of the supply. Ostrich and fancy feathers continue active sellers, and artificial flowers are freely bought. Few orders are being placed for shoddy, and stocks are accumulating. Wholesale men's furnishings are active in all lines. Prices, which are high, are thought to have reached the limit, and a reaction would not surprise the trade. Wholesale notions are also very active, supply not being equal to the demand; prices are high and collections are fairly good. Business with wholesale grocers is satisfactory, out-of-town buying being especially liberal; prices are well maintained and collections good. In the retail trade some special lines have been more or less repressed by unseasonable weather. Confectionery is in good demand and collections are fair. Cigar manufacturers report a large volume of business but slow collections. Stocks of tobacco are low and prices of all grades high. Flour is dull. Supplies of live stock and dressed meats are fully up to the requirements of the market; prices are steady and firm. Butter is in fair demand. Receipts of eggs continue very large and quantities are going into storage. American hemp twine is in very strong request. The hemp recently received, however, is poor in quality and not equal to that of first deliveries. It is estimated that 65 per cent. of the crop has been marketed. Conditions in the hardware and kindred trades are favorable, the volume of business is large, prices are firm and collections are good. Manufacturers of enameled ware are running their factories to full capacity. Importers of china report receipts of large orders. In structural steel business is less active, but collections show some improvement. Pig iron is quiet, copper is weaker, but scrap metal is in good demand. Trade in furnaces, ranges and stoves has been very good for some time past, but is now showing the usual spring lull. Hides and skins are less active and prices tend downward. The general tone of the leather market is weak. Large arrivals of crude rubber caused a drop in price. In the paper trade prices are firm, collections fair to good and demand well sustained. Real estate is fairly active, but foreclosure suits are features. Demand for lumber and building materials has decreased. Prices are firm, but collections are rather slow.

The following telegrams show trade conditions at the cities mentioned for the week ending April 19:

BOSTON.—In dry-goods trade, activityh as become somewhat lessened. Cool weather has retarded retail sales, and as a result collections by jobbers are behind. Strikes by teamsters and by operators on women's suits have checked the receipt and delivery of goods. In textile fabrics, cottons continue conspicuous for strength and upward tendency. Scarcity generally prevails, and there has been considerable buying and selling between jobbers. On printed goods, sheetings and ginghams, advances in prices are being made. Drills, as an exception in cotton goods, appear accumulated in stock by mills and are selling at concessions. Clothing and men's furnishings, in the between-seasons period, are selling less actively, but the market continues very strong. Domestic hides are now the poorest of the year, and prices have reflected the full difference in quality, as well as a quiet demand. The leather market continues to show some buying to cover fall orders, but from all indications shoe jobbers are placing their contracts on a very conservative basis. Some manufacturers are anticipating that the same conditions that ruled last fall will continue during the remainder of this year, on the general principle that no live business man will run the risk of carrying a heavy stock in the face of a possible recession in values. There is no indication of a recession as yet, the hide situation being fully explained, particularly when reports of scarcity at all foreign markets are taken into consideration. Shipments of footwear are showing up well for the period. The previous firm tone in the general paper market is fully maintained. The demand for actual wants is of good volume and the mills are busy on back orders. Paper makers are showing mild interest in the paper-stock market and are buying in fairly generous quantities. In some lines there is a slightly weaker tone due to larger collections, but no quotable change is noted. Anthracite coal is in brisk demand, orders from retailers being numerous on account of continued cool weather. Bituminous is in moderate demand. In the iron and metal line conditions remain about the same, except in pig iron, which is very active. Lumber and building materials are in fair demand, with no material change in prices. Paints and oils show no marked advance. The local butter market continues very strong, with further advances noted on nearly all grades. Brewers are busy, and demand for beer and ales is steadily increasing. The leaf-tobacco market continues firm, with fair demand for better grades. Manufacturers of confectionery are busy and have plenty of orders.

PROVIDENCE.—Machinery and tool manufacturers and wholesalers report a firm demand along all lines. In the jewelry line manufacturers are not particularly busy, though individual cases are found where they are running overtime. Cotton goods continue strong, demand holding firmly ahead of the supply. Jobbers of dry goods and notions report an excellent business. Collections are slow.

PORTLAND, ME.—As spring advances and roads in country become settled, retail business improves. Wholesalers report an average volume of spring trade, and in some instances an increase over last year. There are very few labor troubles in the state.

PHILADELPHIA.—Wool is dull, with little desirable stock on hand. There has been a little shading of prices in certain low numbers of cotton yarns, but fine yarns are in demand and prices firm. Dry-goods jobbers have felt the weather conditions to some extent, and trade is not as active as last year. Flour is dull, but prices are firm, millers showing no disposition to make concessions. Chemicals and dyestuffs are fairly active and quotations rule firm. Paints and glass are moderately active, backward weather retarding work somewhat, but prices are firm to advancing. Lumbermen report a slight lull in demand for immediate use, but the market rules firm, with a prospect of advancing prices. Collections are reported very slow. The hide and skin market is dull and weak, with indications of a further decline in prices. Goatskins are also dull and weak owing to the conditions in glazed kid, which continues dull, owing to the demand for shiny and other leathers. Leather is firm, with fair demand, good supply and high prices still maintained. Wholesale and retail shoe dealers report business quiet owing to weather conditions. Tobacco that was bought some time ago and laid aside for the purchaser is being ordered out now, indicating an improvement in business for cigar manufacturers. The pure-food law affecting shipments to points out of the state only (as this state has not yet passed it) has some adverse influence on trade in liquors. Prices are steady, but collections are slow. Iron manufacturers are sold up far into the year, and demand and prices continue active and strong. Lowering the price of anthracite coal has increased the demand. Bituminous also shows some improvement.

PITTSBURGH.—Since the recent large sales of Bessemer iron the pig-iron market has been quiet. During the week 5,000 tons of Bessemer and 2,500 tons of basic iron were sold for October, November and December delivery at $21, valley furnace. There is but little standard Bessemer or basic iron for sale for last-half or nearby delivery. The unsold iron in the Pittsburgh district for delivery prior to January 1, 1908, is estimated at 75,000 to 100,000 tons. A slight lull is reported in foundry irons. Demand for finished lines continues, and one or two that were rather weak are now reported strong. Pressure for steel rails continues, and negotiations are said to be pending for 1908 delivery. Pipe and tube products are scarce, and it is almost impossible to secure spot delivery of pipe. Orders for structural steel continue very satisfactory. Coke is still in easy supply, and on account of some furnaces being temporarily out of blast, prices will be weak for perhaps thirty days. Quotations for spot pig iron at the valley furnaces are nominally as follows: Standard Bessemer, $23; chilled basic, $23; No. 2 foundry, $24, and gray forge, $21.60. Standard Connellsville furnace coke is quoted at $2.65 to $2.70, and foundry coke $3.80, at the ovens.

BUFFALO.—Owing to continued cold weather, both the retail and jobbing trades are not so active as was anticipated. Building operations continue brisk. The season of navigation is now open. Receipts and shipments of live stock are increasing, prices remain firm, and demand is active.

BALTIMORE.—Continued unseasonable weather has curtailed retail trade, particularly in clothing, stocks of which are larger than usual. Skirt manufacturers are busily engaged for June and July shipments. They make frequent complaints regarding the mill deliveries. Building operations are steadily increasing. Wholesale druggists report out-of-town trade good, with local business fair, but collections are slow. An improvement is noted in lumber, the demand for first-grade stock of standard lengths being good, with prices fair. The market is recovering from an over-stock of cheap grades. White pine has advanced on strong demand. A good demand continues for hardwoods, with prices firm. Paper at wholesale is quiet, prices steady, deliveries somewhat improved and collections fair. Crockery and glassware dealers report a fair volume of business, with collections backward. Woodenware deliveries are somewhat easier, with business normal. In oils collections are good. Leaf-tobacco collections and demand have improved, with prices of Sumatra very high. Domestic tobaccos are lower than for some months. There is a scarcity of fancy grades of butter, with prices advancing. Clothing manufacturers report a satisfactory fall-order business from salesmen now out; collections, however, are slow. Shoe jobbers report business quiet, the exception being the increased demand for low cuts, mostly tan. In other lines than these full stocks are on hand, with about normal orders from the salesmen now out. Men's furnishings sales are also feeling the effects of unseasonable weather, which has caused much disappointment. No material change is noted in the money market, while the feeling is somewhat easier; rates continue at 6 per cent.

CINCINNATI.—Expansion is reported in jobbing lines. This is especially noticeable in demand for women's undergarments and dress goods. Demand is for medium-priced goods. Manufacturers in leading lines report good business, and it is their opinion that trade will continue brisk for some time. Department stores and retail sales in general have suffered greatly during the past two weeks, owing to cold weather. The whiskey market is more active and an increase in prices is looked for.

CHICAGO.—Trade reports reflect a large distribution and consumption of goods, although the volume has decreased of late. Traffic conditions on eastern and western railroads have improved and cars are more plentiful. New construction work is being curtailed. Jobbers' sales of dry goods, clothing and shoes for immediate and future delivery are liberal. Retail trade is good, although somewhat held in check by unfavorable weather. A decided revival is noted in the pig-iron market. Inquiries here have increased and sales are enlarging for spot and last-half delivery. Finished products are meeting with good sale, and specifications are furnished without trouble. The movement of coal is good for the season. Lumber is having an increased sale, and prospects are for a most active building season in this vicinity, as larger sales of building material have been made. Groceries and paints are having a good sale at full prices. The produce trade is fair, with an advance in potatoes and a decline in eggs. Hogs are a shade lower. Receipts of cattle and hogs increased, but those of sheep decreased. Money is easy. However, banks are closely loaned up. Opening of lake navigation has released a large amount of money tied up in grain. Country banks are free buyers of commercial paper at 6 to 6¼ per cent. Collections are fair.

INDIANAPOLIS.—In the wholesale meat and packing trade business is unusually good and prospects are excellent. Prices are high owing to scarcity of beef on the hoof. In the rubber and leather trades reports vary from fair to good.

ST. LOUIS.—Retail trade is dull owing to continued cool weather. Manufacturers of and jobbers in shoes report a very satisfactory business and say collections are better than for April of last year. Jobbers in dry goods show considerable increase for the season over last year and report better collections. Manufacturers of and jobbers in hardware indicate a satisfactory season, and the same may be said of wholesale drugs, clothing and millinery. Country merchants are buying freely and seem able to do more discounting than heretofore. Money is much easier. Demand is active.

KANSAS CITY.—Unseasonable weather has had its effect on business generally. Reports, however, from traveling salesmen in leading lines are favorable as to the outlook. Demand for all kinds of building material is in excess of a year ago, and in many grades of lumber the supply is inadequate. Heavy construction work has been retarded owing to the delay in getting steel. Collections are quiet.

MILWAUKEE.—Trade in jobbing lines has improved, but retail is still rather quiet. Collections are fair; money is easier.

SIOUX CITY.—Trade is fair.

DAVENPORT.—Retail trade is quiet, due to unseasonable weather. Business for April does not equal that of the corresponding month last year. Manufacturers are busy. Wages are high and there are few idle laborers. Collections are slow. A good demand for money prevails.

ST. PAUL.—Cold weather the past week has discouraged jobbing trade, and nothing like the business anticipated has been done. Spring stocks in country stores are not being disposed of, so salesmen find it hard to place fall orders. In the city, dress goods and silks are not on hand in sufficient quantities to supply the demand. Ginghams ordered for delivery last fall have not been received by the wholesalers yet. Money came in quite freely during the first half of April, but has let up since.

MINNEAPOLIS. — General business continues satisfactory, though somewhat restricted by bad weather. Building operations are being vigorously prosecuted and materials are much in demand. Flour remains quiet and production curtailed.

OMAHA.—Retail trade is considerably retarded by cold weather. Jobbers in all leading lines report sales exceeding those of last year. Collections are only fair.

LINCOLN.—Business in millinery and furniture is good. Other lines are fair, though improving. Collections are fair.

CHARLESTON.—Trade in all lines is quiet. Collections are slow.

RICHMOND.—The weather of the past few weeks has had an unfavorable effect upon retail trade, and in consequence filling-in orders are few. The opening of the Jamestown Exposition, the Confederate reunion and several important conventions are expected to attract an unusually large number of buyers to this market, and it is therefore believed that sales of jobbers and manufacturers for the full season will exceed all previous records. Real estate is active. The usual end-season lull periods in dry goods, hats and similar lines prevail, but in shoes and clothing liberal orders for fall delivery are being received, with a fair proportion of orders for immediate shipment. Light receipts of early vegetables keep prices high. Money is in active demand, and all available funds find ready employment. Collections are fair, with indication in some lines of improvement.

AUGUSTA.—Wholesale trade continues good. Retail trade and collections are fair.

ATLANTA.—Trade is dull and collections are slow.

BIRMINGHAM.—Southern foundry No. 2 pig iron is strong at $23. Trade in dry goods and clothing is not so good, owing to cool weather. Collections are poor.

MOBILE.—The terminals of the Southern Railroad at Mobile, considered among the handsomest

in the south, were formally opened on Thursday. Disagreeable weather causes a lull in both wholesale and retail centers. Collections are fairly good. Prices of lumber and naval-stores products are holding firm, with increased demand for lumber in interior markets.

MONTGOMERY.—Unfavorable weather the past week has interfered with trade in all lines. Business is quiet. Collections are slow.

CHATTANOOGA.—Business continues active in all lines, and the outlook for a brisk summer is good. Collections range from fair to good.

KNOXVILLE.—Unseasonable weather is still retarding retail trade, and spring stocks are but slightly broken. Furniture manufacturers and coal operators are complaining of the car shortage, and it is said that shipments are reaching their destination a month or six weeks late. Collections average only fair.

MEMPHIS.—Cold, rainy weather retards retail business. Wholesale trade is fair. Collections are slow.

NASHVILLE.—Jobbers report a fair business. Collections are fair to good. Cold weather retards retail trade.

LITTLE ROCK.—Retail trade shows a falling off, owing to rain and cold weather. Collections are fair.

NEW ORLEANS.—Retail trade is only fair, due to cool weather, with now and then a hot day. Jobbers are doing a seasonable business. Money is firm.

FORT WORTH.—Trade is fairly active.

DALLAS.—Trade continues favorable in all jobbing lines. Collections are fair. Retail trade is quiet, due to cold weather.

SAN FRANCISCO.—Traffic is resuming regular schedules, and fair weather has given great impetus to rebuilding. Trade in all lines is excellent, due to the remarkable progress of rehabilitation from the disaster of a year ago.

SEATTLE.—Flour has advanced in price, and there is a brisk demand for all lines of building material. Money is still tight and collections are only fair.

SPOKANE.—Railroad building continues to be actively prosecuted. Wholesalers report business good. Collections are slow.

TACOMA.—Trade shows some improvement. Collections are fair.

PORTLAND, ORE.—In nearly all lines of business here there is pronounced activity, and an optimistic feeling prevails. Persistent advertising has resulted in a heavy stream of immigration into this part of the country.

TORONTO.—Warm weather seems as far off as ever, and there has been little change in general trade. The retail movement of spring goods is only fair, but wholesalers are exceedingly busy trying to catch up with orders which they have been unable to deliver, owing to manufacturers' slow deliveries. The dry-goods trade is, perhaps, the most active of any. Insistent demands for all lines of goods are still being made, but in most cases deliveries are as slow as ever. Stocks of ribbons and all lines of silks are light here, and prices are firm. Cotton prices are reported as likely to go still higher. These slow deliveries are getting to be a serious matter to many retailers, who are likely to suffer losses if the situation is not to some extent relieved. Mail orders to local wholesalers are quite large, indicating short stocks in the country. The opening of navigation here is having a livening effect upon the grocery trade. Canned goods are very firm, with some lines scarce. Upper lake navigation will not open until about the first of May. All lines of manufacture are busily engaged and there is some trouble in the matter of obtaining sufficient labor. It is expected the first of May will pass off without any serious disturbances in the way of labor troubles. Printers, however, are going to put the eight-hour day into enforcement.

MONTREAL.—Cold weather is seriously affecting spring trade. Retail trade is feeling the effect in light demand for spring goods. Snowfalls throughout Quebec have put a damper on early business, and collections are affected. Wholesale trade, however, continues about as active as jobbers care for. The season of summer freights has arrived, and very large shipments are proceeding. This is especially the case in hardware, as shipments have been awaiting summer freight rates for some time. General lines of hardware are in good demand, but it is in metals and other heavy lines that there is most activity at the present moment. Manufacturers have orders beyond capacity. The Dominion Iron & Steel Company, at Sydney, is engaged upon a contract covering 37,000 tons of 100-pound rails for the Grand Trunk Railway. All Canadian foundries have orders for what rails they can turn out this year. The feature in the dry-goods trade is the continued firmness in all lines of goods. Little tendency has been shown towards more rapid delivery, and jobbers' stocks are getting light. Cottons hold very firm. Manufacturers of underwear are refusing further orders, except those for next year. The grocery trade is more active. Prices hold firm. It is expected that navigation here will open about the end of this month.

VANCOUVER-VICTORIA.—Provincial industries are exceedingly active in almost all lines. The lumber and mining camps are busy, and as a result there is a very active demand for all lines of supplies. The situation in hardware has been somewhat relieved by the arrival of delayed shipments. The opening of a steamship service between Vancouver and Mexico will soon be inaugurated. It is expected that a big foreign trade will open up in this connection. The shortage of cars is affecting the lumber trade. Stocks piling up here are badly needed in other districts. Coal miners' strikes may have a serious effect.

WINNIPEG.—Wholesale trade is brisk in all lines here. Retail trade, however, is rather quiet on account of bad roads and a backward spring. Collections do not show any very marked improvement, but the grain which has been held in farmers' hands is moving fairly well. General business has a healthy tone and as soon as warm weather really starts in a big business is expected to open out in all lines. Wholesalers are still troubled by slow deliveries of goods. Immigrants are coming into the country at the rate of several thousand a week.

Money Market.

The loss in surplus reserve shown by last Saturday's New York bank statement, rendering the showing unexpectedly unfavorable, seemed to have little effect in the loan market at the beginning of the week. It was generally appreciated that the increase in the bank loan was largely due to the paying off of borrowings from interior institutions which had placed money in Wall street during the period of high rates and naturally find no attraction in the present interest quotations there. The fact that domestic exchange at various points is adverse to New York may be considered as due in large part to the tendency in question. On the other hand, the banks have this week continued to gain from the Treasury, and the estimated actual gain in their cash holdings is placed at about $3,000,000. During the week call money has been abundant at from 2 to 2½ per cent., and time money for short periods was offered with more freedom and at concessions from the rates previously quoted, some transactions for thirty days being reported at 4 per cent. Longer time arrangements are, however, firmer, six months' money being held at 5 per cent., and lenders show a determination to stand out for 5½ per cent. as regards loans running over into 1908. Commercial paper shows considerable improvement. Not only is there a much better buying demand, but the offerings are larger and afford considerable variety for selection:

New York Banks.

According to estimates, the New York Clearing House banks made an actual gain of only about $3,700,000 in cash from the Treasury operations and interior movement of funds last week. In the bank statement made public on Saturday there was shown an increase of $7,648,000 in the cash items, or about double the supposed actual gain. This was attributed to the average system and probably represented the gain in cash of the preceding week, part of which did not appear in the statement of the 6th instant. The most important feature of last Saturday's bank statement, however, was the unexpectedly large increase in the loans, which were expanded by no less than $36,900,000. In this case the explanation was that the lower rates for call money and the easing of time loans had resulted in the transfer of borrowings from trust companies and out-of-town banks to Clearing House institutions, as well as the paying off of loans made abroad with a similar effect. The increase of $44,900,000 in the average deposits was in pretty close accord with the changes in the loans and cash items, so that the statement was, on the whole, a symmetrical one. In consequence of this expansion in the deposits the reserve required was $11,237,000 greater, and the surplus reserve consequently decreased $3,588,000. The figures of the statement compare as follows with those of the preceding week:

	April 13	*April 6*	*Changes*
Loans	$1,099,657,100	$1,062,688,830	I. $36,968,300

Bank Clearings.

[By Telegraph to BRADSTREET'S.]

BRADSTREET'S Bank Clearings Report for the week ending April 18 shows an aggregate of $3,014,063,000, as against $3,053,450,000 last week and $2,989,724,000 in the corresponding week last year. Canadian clearings for the week aggregate $77,729,000, as against $80,975,000 last week and $54,940,000 in this week a year ago. Following are the detailed returns by cities for this week and last, with percentages of increase or decrease as compared with this week in 1906:

	April 18	*Inc.*	*Dec.*	*April 11*

Foreign Exchange.

Continued ease in the money market at New York seemed to be mainly responsible for the rather strong tone in exchange. The market was not very active and the demand for remittances at no time assumed an urgent character. It would seem, however, that repayments of foreign loans made earlier in the year to stock-market interests are still in progress, the buying of bills for this purpose giving the exchange market its chief strength. The supply of commercial bills was normal and the market presented no special features. Further improvement in the financial position at London was noted with satisfaction, but the Bank of England's management made no change this week in its discount rate, although some hope of such action had been entertained. On Friday the market was strong and a little higher under a continuance of influences noted above.

POSTED RATES OF LEADING DRAWERS FOR LONG AND DEMAND STERLING.

Apr. 13	*Apr.* 15	*Apr.* 16	*Apr.* 17	*Apr.* 18	*Apr.* 19
4.83½ @ 4.86½	4.83½ @ 4.86½	4.83½ @ 4.86½	4.83½ @ 4.86½	4.83½ @ 4.86½	4.83½ @ 4.86½

Closing quotations on Friday for actual business in other classes of bills were: Cables, 4.86@4.86.05; commercial bills, 4.81⅞@4.82¼; francs, 5.22½ less 1-32@5.19¾ plus 1-64; reichsmarks, 93 15-16@94 13-16.

The Bank of England's discount rate remains at 4½ per cent. For the week ending Thursday the institution showed a gain of £438,252 in gold, and its proportion of reserve to liability rose from 43.55 per cent. to 44.65 per cent., this last comparing with 43.75 per cent. a year ago. In the London open market call money is 1½@2 per cent., while discount is 3½@3¾ per cent. The Bank of France maintains its discount rate at 3½ per cent. It showed for the week a decrease of 500,000 francs in its gold. In the Paris market the quotation for loans is 3¼ per cent. At Berlin the bank rate is 6 per cent. and the market quotation 4½ per cent.

New York Securities Market.

Transactions at the Stock Exchange fell off very materially this week. On Thursday the volume of trading at that institution amounted to little over 309,000 shares, and on Friday to 293,000 shares, making records thus far for dullness this year. In spite of the poor bank statement of last Saturday and the announcement of a failure on the Exchange, the latter being the first event of that kind during the entire downward movement of prices, the tone was rather strong on the two first days of the week. In fact, the failure seemed to stimulate rather than to depress the market for a time, doubtless on the ground that the incident was regarded as of little importance in itself, while its actual announcement removed the fear which had been present to some extent in the minds of the stock-market public lest somebody of weight might be involved. There was also better crop news, the advices from the west tending to minimize previous reports of severe and extensive damage to the grain crops. Money likewise continues very easy, and the banks this week gained a further considerable amount from the Treasury, as a result of the policy in regard to government deposits and bond redemption instituted by Secretary Cortelyou. This has offset the noticeable tendency of country banks to draw in the loans which they had made to Wall street interests while high rates for money were prevalent, the figures obtaining of late for both call and time loans no longer offering sufficient attraction. While foreign exchange continues firm at a point which puts gold imports out of the question, there was further improvement in the financial position abroad, even though the Bank of England did not gratify the expectation that its rate would again be marked down. It was noted also that the Bank of Germany displayed a large increase in cash, and that the success of the new Prussian loan which is being brought out at Berlin seems practically assured, while at London a $25,000,000 County Council bond issue was subscribed twenty times over. In other words, the evidence both here and abroad is that the pressure upon the money markets has been lifted. Neither this nor the other somewhat favorable incident referred to above were sufficient to keep up the bullish tendencies in speculation seen earlier in the week, and which, it must be admitted, proceeded more from covering of shorts and temporary operations on the bull side by room traders than from tangible support by the large interests or a disposition to buy on the part of the public. As the week wore along, in fact, not only did the transactions diminish to the extent already mentioned, but the market became still narrower, and in its fluctuations, which were mainly of a very limited character, there was no special significance. Slight rallies signalized the closing transactions on Thursday, but whatever little activity there was centered in a few stocks, of which the most notable were Amalgamated Copper, Reading, Union Pacific, Pennsylvania and a few others. The continued talk about present and prospective drops in copper prices had an unsettling effect on Amalgamated, although the street was not particularly disappointed by the news that no change was made in the quarterly dividend on that stock. There was a dearth of other incidents bearing on the railroad situation, and the complications which have arisen in regard to the Chicago Terminal Traction organization were not of a kind to have any effect on the market. Discussion continues to be heard about the coming dividend on United States Steel common, although the weight of opinion in that respect is that no increase may be anticipated. The bond market was dull and the demand for investments of that class somewhat smaller, in spite of the fact that easy money rates create some inquiry for the high-grade class of bonds.

Securities at Auction.

Shares or bonds sold	*Quotations*
160 Metropolitan Casualty Insurance Co. of New York	125

National Bank Returns.

The Comptroller of the Currency last week gave the returns of the 6,344 national banks in the United States under call of March 22. The following changes are shown in the important items of the abstract compared with the return of January 26:

Loans and discounts	Inc.	$72,576,468
Specie	Dec.	21,636,640
Legal tenders	Dec.	17,646,332
Total cash	Dec.	39,282,972
Due other national banks	Dec.	40,706,736
Due state banks and bankers	Inc.	10,705,990
Due trust companies and savings banks	Dec.	10,344,502
Individual deposits	Inc.	153,861,335

Compared with a year ago (April 6) these same items show the following changes:

Loans and discounts	Inc.	$394,667,399
Specie	Inc.	40,906,512
Legal tenders	Dec.	5,180,830
Total cash	Inc.	35,725,682
Due other national banks	Inc.	47,830,903
Due state banks and bankers	Inc.	49,930,899
Due trust companies and savings banks	Dec.	20,103,490
Individual deposits	Inc.	291,043,743

Following are the principal items of the present return, compared with the last previous statement and with that of the corresponding date last year:

	Mar. 22, 1907	*Jan.* 26, 1907	*Apr.* 6, 1906
Number of banks	6,344	6,288	5,975
Loans and disc'ts	$4,535,844,098	$4,463,267,630	$4,141,176,699
Specie	500,085,913	521,722,553	459,179,401
Legal tenders	156,134,637	173,780,969	161,315,467
Total cash	656,220,550	695,503,522	620,494,868
Due other nat. bks	859,867,389	900,574,125	812,036,486
Due state banks and bankers	407,338,791	396,632,801	357,407,892
Due trust cos. and savings banks	330,909,599	341,254,101	351,013,089
Due reserve agts	39,042,929	38,465,679	36,799,974
Individual dep'its	4,269,511,629	4,115,650,294	3,978,467,886
U. S. deposits	140,801,794	145,891,091	64,133,037
Dep. of U. S. disbursing officers	12,557,155	11,471,053	9,389,866
Ratio of reserve	20.74	21.52	21.03

Important items in the report compare as follows for the corresponding date in previous years, three figures being omitted:

	Loans	*Total cash*	*Individual deposits*	*Due other banks, etc.*
1907	$4,535,844	$656,220	$4,269,511	$1,637,157
1906	4,141,176	620,494	3,978,467	1,557,256
1905	3,851,858	641,154	3,757,474	1,555,627
1904	3,544,998	617,515	3,254,470	1,382,884
1903	3,403,217	536,214	3,168,275	1,217,923
1902	3,172,757	558,244	3,111,690	1,248,722
1901	2,911,526	549,097	2,893,665	1,226,868
1900	2,566,034	497,889	2,449,212	974,171
1899	2,403,410	474,397	2,437,223	932,348
1898	2,097,094	436,241	1,999,308	669,848
1897	1,923,365	356,631	1,728,083	558,220

United States	1,247,000	1,321,000	1,184,020
Total	5,226,000	5,315,000	4,526,000

Following will be found the movement of cotton into sight for the week and season, as compiled by the New York Cotton Exchange:

	This week	*Last week*	*Last year*
Week	109,042	150,220	131,975
Season	12,471,499	12,354,923	9,825,170

Boston Shoe and Leather Market.

Sales of hemlock sole leather have been of a moderate character during the past week, and a fair business has been done in union. Oak sole leather appears to be becoming scarce. Dealers are not prepared to make contracts for large deliveries, and stocks in warehouses are said to be abnormally light. There is more inquiry for grain leathers, and a fair amount of leather is going forward. Shoe manufacturers are not, however, making many large purchases as yet. Black splits are still sold ahead, and demand for flexible splits is as brisk as ever. Patent leather manufacturers have about caught up with their orders, and demand is more quiet, as end of spring now approaches. Hides are lower, but quality is the poorest of the year, and actual recession, after making allowance for difference in quality, is more apparent than real. There is, however, a lack of buying, which has weakened the dealers. Tanners are not yet buying more than immediate needs. Ohio buffs are quoted at 11 to 11½ cents. Sheepskins are still scarce and high. Wholesalers are placing orders for summer delivery of fall goods, but the amount thus far actually contracted for is below that of last year and the pessimistic ones are looking for another quiet fall season. Buying is conservative in all lines and prices are accepted as fixed. Shipments are showing up well in comparison with last year. They again exceed those of the same week last year. The *Shoe and Leather Reporter's* figures this week are as follows: Last week, 103,840 cases; preceding week, 105,629; last year, 99,022; total for 1907, 1,423,804; total for 1906, 1,483,595; decrease, 59,791.

Boston Wool Market.

As usual at this time of year, between the clips, the market is very quiet, and only small lots of wool are being moved to supply immediate needs of manufacturers. But this year the usual quiet is more pronounced on account of the very late opening of western markets, where the interest is usually very brisk during April, May and June. The growers are still asking very high prices for their clips, and buyers are holding off, and while generally at this time many Boston buyers would be actively engaged in contracting in the wool sections, only two or three have left thus far. In fact, the dealers are now facing a turning point in trade conditions, and are determined not to pay a cent over what the wool is actually worth to them for sale at a fair profit. Advices from England, where local conditions are keeping prices up, are that the May sales will open as high or higher than the March series, and dealers fear the effect this may have on the growers, who are already very firm in their ideas of the value of their clips. In Texas growers and dealers are 2 cents apart, with no signs of the least concession by either seller or buyer. About 60 per cent. of the direct wools from Australia have now reached this country, and the mills are well supplied. The New Zealand wools are also coming, but of a grade which is not in active demand. Cold weather is interfering with shearing in the west, but operations are general in Texas and southern California. Shearing is now beginning in Nevada, Utah and Wyoming, but nothing has yet been done in the new wools, except a sale of a small lot in California of eight months' wool at 17@18 cents, about last year's price. Owing to the better condition of the wool the scoured cost will be less than last year.

Trade Openings Abroad.

Consul-General G. B. Ravndal writes that it would pay any American association of manufacturers of cotton goods to send a specialist with a large and well assorted consignment of all the cheaper grades of American cottons, to be placed in the hands of leading houses at Beirut, Aleppo, Bagdad and Port Sudan, and sold, even at a loss, in order that they may become well and widely known.

Consul A. A. Winslow reports as follows from Valparaiso: "The Chilean government is about to advertise for tenders for the construction of 126 kilometers (seventy-nine miles) of railway from Osorno to Puerto Montt, of one meter sixty-eight centimeter gauge. The cost is limited to $12,000,000 Chilean gold, or $4,380,000 United States gold. The tenders are due three months after the appearance of the advertisement, which is about to appear. The work is to be completed within forty-five months after the contract is let. Several important bridges are to built."

One of the most important grocery stores in Austria is desirous of being placed in communication with American exporters of the best qualities of canned fruits. This firm is also in the market for the best qualities of all kinds of canned goods, also for pickles, catsup, cakes, dried fruits, jellies, etc. The firm would buy on cash basis and in large quantities. Correspondence in German. Information may be obtained from the Department of Commerce and Labor.

A firm in the Balkans desires to makes a specialty of American shoes and would like to correspond in German with an American manufacturer. The quality of shoes required are those that could be sold at retail for $5 to $5.40 for men, $4.25 to $4.60 for women, $1.50 to $1.75 for six to ten year old children and up to $1.25 for smaller. Rubbers must be of a very heavy quality. Those now used are imported from Russia and sell for $1.93. Shoe polish is also required. The duty on footwear in the country in question may be obtained from the Bureau of Manufactures, as well as the name of the interested merchant.

Consul A. A. Winslow, of Valparaiso, reports: "There is an opening here for American coal of the better quality for steam and gas. At present it principally comes from England and Australia, and for 1905, the last figures obtainable, there was imported 1,179,058 tons, valued at 23,581,160 pesos, Chilean currency, or about $7,000,000 United States gold. The price of coal now is very high. Native coal is quoted at from 30 to 36 shillings ($7.30 to $8.75) per ton, and is often hard to get. The native coal is dirty and not desirable. It makes poor gas and coke and is not a good steam coal. With the outlook for the next few years for the development of Chile along all lines, and especially in manufacturing and mining, there certainly is a big chance for American coal. Coal is on the free list."

CHICAGO SEVENTY YEARS OLD.

Chicago was incorporated as a city in 1837. Therefore an article written by Newton Dent for *Munsey's* April number is especially apropos. Mr. Dent says: "Chicago is seventy years old this year, but is too busy to celebrate. When she was twenty-seven years old she was as large as Athens or Damascus; at forty-three she had caught up to Rome; at fifty-six she had surpassed Tokio, Vienna and St. Petersburg. Chicago is as populous as Greece; has twice the revenue of Denmark; more newspapers than Africa; greater railway mileage than Norway; more schools than Portugal. Fifty-nine years ago there was neither railway nor telegraph in Chicago; to-day its passenger trains average one a minute, and its telephone wires would engirdle the earth ten times. Men sitting in skyscrapers talk of the time when they could have bought the ground beneath them for an old gun or a pair of shoes.

"Every state in the Union hurries at the call of Chicago; she handles 2,000,000,000 feet of lumber a year, 50,000 farm animals and 1,000,000 bushels of grain every week day.

"In rapidity Chicago has always stood in a class by herself. She is ruled by the Big Minute. Her people are more than quick—they are electric. They spend fast, but they earn faster than they spend and think faster than they earn. The twenty-four-hour trains to New York were too slow for Chicago; at its demand the time has been reduced to eighteen.

"No other city has created so many new industries and commercial institutions—for example, the skyscraper, the harvester, the Pullman car and the packing-house idea originated in Chicago. Of all ideas the latter has been the most profitable, having risen to a total of six hundred millions a year—as much as the value of the cotton crop or the combined exports of Canada, Switzerland and Spain.

"Chicago in her mills and factories employs more workmen, pays more wages and reaps more profit than Massachusetts.

"One of her piano factories is making more pianos than all the factories of France; last year her tailors made as many suits as would clothe every man in Spain, and her shoemakers, shoes enough to supply one pair to every man, woman and child in Mexico. If all her new buildings in 1906 were put in line they would stretch fifty miles. In her eighty-five elevators Chicago could store the entire wheat crop of Great Britain. She has the finest postal building in the United States, which cost $4,000,000, but it was outgrown before the builders had laid the last sheet of gold leaf on its dome. The Marshall Field store, with its floor space of something like thirty acres, forty-five display windows and fifty elevators, has been proved too small, and enlargements have become necessary."

THE SKIN FAMINE.

Consul C. P. H. Nason, of Grenoble, furnishes an interesting review of the business of that French district for the calendar year 1906. The following paragraphs are taken from the consul's report:

"The total value of merchandise exported to the United States through Grenoble in the year ended December 31, 1906, was $3,138,246, an increase of $1,354,000 over 1905. The principal articles of export to the United States were kid gloves and walnuts. These two aggregated $2,562,872 last year. Of kid gloves the value was $1,956,472, which is nearly equal to one-half of the entire value of kid gloves imported from France during that year.

"The kid-glove industry, of which Grenoble is the center, has been marked by unwonted activity. For several years prior to 1905 there had been a gradual decline in the demand, if not in the use, of ladies' kid gloves in the United States. This was largely due to the growing outdoor use, especially in the warmer season, of the so-called 'fabric gloves,' gloves made of lisle thread, silk, etc., and which had been greatly improved both in design and finish. Fashion then decreed a shorter sleeve to the woman's dress, both for indoor and outdoor wear, and there followed, and still continues, the reign of the long kid glove. White was at first the prevailing color, but later the preference was given to black and what is known as the tan shade. Gloves in these colors, from moderate to extreme lengths, have gone forward as never before to the United States. This demand has put an unwonted strain upon the skin markets, and not only France, but all other kid-producing countries have been ransacked to find the coveted material, the more so because the longer gloves call for skins of double length or two skins put together, in place of one skin of ordinary length. In consequence the prices of kid and lamb skins have tended steadily upward, until there has been almost a panic in the skin market.

"This naturally has accrued to the greater profit of the skin merchants, skin gatherers and growers. The larger manufacturers who were fortunate enough to have full stocks on hand have also profited. It has been hardest on the smaller manufacturers, who have been forced to buy their skins at current rates to meet previous contracts or hold their customers. Retail prices of gloves have necessarily advanced, but not in proportion to the rise in prices of skins. These within a year have doubled and even more than doubled. And this condition of things has only been intensified by the use of skins for other purposes than gloves, and by the dearth of material in the world's leather market, pushing the price of all kinds of leather up notch by notch."

DANGER OF OVERPRODUCING TOBACCO.

The *Western Tobacco Journal* says: "At this season of the year, when all thoughts are directed to the planting of the 1907 tobacco crop, the wise heads in the tobacco business, those who have followed the trend of markets and closely observed for years the effect of existing conditions, are shaking in disapproval of the apparent attitude of the tobacco growers, particularly in the Burley belt. Everything points to a big acreage being put out the coming season, and that is virtually the the same thing as literally 'killing the goose that laid the golden egg.'

"Farmers are tobacco crazy. It is not a new disease, nor is it taking a particularly new form, but it is one that has not been widespread, at least in the last few years. Prices realized for the 1906 crop of Burley so far have ranged from 8 to 16 cents per pound, and many farmers have sold their entire crop around 14 and 15 cents straight. The average for the Burley crop thus far sold may be conservatively estimated between 10 and 11 cents per pound, and it is nearer the latter figure.

"Now, what brings about an increase in the price for any product of the soil? It will be maintained by many, but with little reason, that the American Tobacco Company will and does bid tobacco up to a high figure to prevent independent concerns from acquiring holdings larger than they would consider safe. But the American Tobacco Company is not a philanthropic organization, and if it could buy tobacco for 5, 6 or 7 cents, or even less, as the manufacturers did before the American Tobacco Company was formed, it is scarcely likely that it would be willing to pay more. It is purely the old law of supply and demand. One does not need to investigate very far to find the cause for the higher prices that have been paid for Burley this season. The 1906 Burley tobacco yield has generally been considered a comparatively short crop, and this in the face of a greatly increased demand. This, added to the fact that not less than half the crop has been held off the market by the Burley Tobacco Society, has caused a scarcity of the weed on sale, and buyers have been forced to pay the fiddler or go without.

"From all parts of the Burley tobacco belt comes the same report: 'Farmers are tobacco crazy and will plant an increased acreage this year.' Unless all the growers see their mistake in time and change their course accordingly, for the first time in years we may look for an overproduction. Notwithstanding the high prices that have been paid recently, prices are now 1 to 2 cents off, and the outlook for 1907, from the grower's standpoint, cannot be said to be reassuring.

"The Burley tobacco branch of the American Society of Equity, combined with the short crop of 1906, has contributed to increase the average price paid for Burley so far this year. The farmers' organization in the Green river and the dark-tobacco belts have also had their effect, and the pooling movement all around is being accredited a success, even by those who were its most strenuous opponents. With increased acreage the cry in the rural districts all along the line it will not be surprising to find, when the 1907 crop is harvested and on the market, that it has been a bumper yield. While the outlook, from the grower's standpoint, may not be a bright one, manufacturers may view the situation with no small satisfaction. A large tobacco crop will be the best thing that could happen for them. Under the present prevailing high prices, especially for Burley tobacco, manufacturers are finding it a difficult matter to sell their products at the old rates and still secure for themselves anything like a reasonable profit. A bumper crop will reduce tobacco prices quicker and more effectually than anything else could possibly do, and while the grower may be a heavy loser, the manufacturer would find himself in a position to recoup some of the losses he has sustained under present conditions."

BRADSTREET'S

PUBLISHED WEEKLY BY

THE BRADSTREET COMPANY,

NOS. 346 AND 348 BROADWAY, NEW YORK.

Berlin, 23 Charlotten-Strasse.
London, 137 Cheapside, E. C.
Melbourne, 231 Flinders Lane.
Paris, 20 Boulevard Montmartre.

TERMS: $5.00 PER YEAR IN ADVANCE.

Remit by Express Money Order, Draft, P. O. Order or Registered Letter.

Communications regarding editorial matters should be addressed to the Editor; all others to the Publishers.

ENTERED AT THE POST OFFICE AT NEW YORK, N. Y., AS SECOND-CLASS MATTER.

SATURDAY, APRIL 27, 1907.

Imposing ceremonies marked the official opening of the Jamestown Tercentennial Exposition yesterday. The occasion was distinguished by the presence of President Roosevelt and of Cabinet officers, ambassadors and ministers from foreign countries, senators and representatives, governors of states and high officers of the naval establishments here and abroad. One of the features of the day was the review by the President of the great fleet which has been gathering for some time in Hampton Roads, a fleet which comprised nearly fifty vessels, some of which had individually a tonnage one hundred times as great as that of the three little vessels which were blown into the mouth of Chesapeake bay just three hundred years before. President Roosevelt's address opened with words of welcome to the representatives of foreign countries, and then tracing rapidly the large movements in the history of the country, dwelt at the close, in a general way, upon the spirit in which the problems of the present should be met. Perhaps this part of the speech, which has been looked for with no little interest, cannot be better summed up than in a sentence in which it is declared that "it is our business to put a stop to abuses and to prevent their recurrence without showing a spirit of mere vindictiveness for what has been done in the past."

After a period of uncertainty such as is not unusual in such circumstances, the negotiations for Central American peace, which were in progress at Amapala for about a week, were brought to an apparently successful issue on April 23. The odd feature of the agreement is that it has been signed by the envoys of Nicaragua and Salvador; Honduras, which was the original antagonist of Nicaragua in the war, being apparently regarded as a negligible quantity. While the details of the treaty are not made known in the dispatches at hand, it is understood that it contains a provision for the calling of a general peace conference of all the Central American states, to be held at some place in Nicaragua. A provision is also embodied for the conclusion of a commercial agreement between Salvador and Nicaragua. Reports from the theater of the late disturbance indicate that the arrangement arrived at is in the nature of a compromise that is regarded as satisfactory to those most immediately concerned.

About the first of May the labor situation usually experiences a degree of unrest, but this year matters in that respect can be characterized by the words, healthful and quiet. While that is the condition of affairs at the present moment, it is well, nevertheless, to bear in mind that conditions in the labor world are apt to change at any time; in fact, the situation at this season is prone to be specially mutable, though surface indications for the immediate future do not point to anything unfavorable. To be sure, strikes are in progress here and there, but the main point is that labor matters were seldom before in as good shape as they are at present, which is saying a good deal for the period about May 1. Indeed, the situation since the opening of the year has been an especially good one, strikes being few in number and comparatively unimportant in effect, that is, in the wider sense. Employment has been plentiful, while wages have been on the up-grade, although, of late, retrenchments by railways have made for a better supply of unskilled labor, especially at western points. Threats of disturbances have been numerous enough, the western trainmen's proposed strike being the most important, but little of an untoward nature developed. In a word, the past is pleasant to look upon, the present furnishes cause for gratification and the future holds but little of ill omen.

On June 15, according to present arrangements, the second Peace Conference will be opened at The Hague. Fifty-three nations have been invited to participate in the discussions of the conference. These countries include, besides those who joined in the first conference, the South American republics and Korea. It is expected that the conference will be in session for about six weeks. Any work remaining to be done at the close will be turned over to special committees to be appointed by the conference during its sessions. It is probable that any discussion which may be had of the question of disarmament will be largely academic in view of the well-understood attitude of some of the more important European states. If advices from Japan are reliable, one of the features of the conference will be the presentation by the representatives of that nation of a series of independent proposals for the conclusion of conventions for the conduct of battles on sea and land, and regulating, among other things, the use of mines in commercial routes, the employment of wireless telegraphy between besieged fortresses and points in neutral territory, the use of neutral ports for belligerent purposes, and methods for declaring the opening of hostilities.

Foreign crop advices are of such a character that one might reasonably look for a good European demand for American wheat during the spring and summer months. Of course, this prospective demand will be governed to a considerable extent by the domestic price situation, which will, in turn, hinge upon the probable size of the home-grown crop. In this connection it is well to point out that current reports regarding the condition of our winter-wheat crop are not anyway roseate; and, if indications are to be trusted, it is probable that the forthcoming crop report of the government will render it necessary to scale down previous estimates as to the prospective yield. However, this does not alter the point made in the opening words of this article—that demand from Europe will tend to develop "at a price" as the season progresses. Before proceeding further, however, it may not be amiss to take a glance at the most recent returns as to the condition of wheat crops over sea. Thus, cold weather has retarded the growth of the plant in the United Kingdom and France, while supplies are becoming scarcer, and like remarks apply to Germany. In Hungary winter wheat has deteriorated about 20 per cent., and in Roumania winter crops are backward. Reports from southwestern Russia indicate that cold weather and high winds have damaged the weak plant. Enough has been cited to show that conditions abroad are not of the best, and, therefore, it is not surprising to find that European markets tend to work to a higher level. While on this point, it is interesting to note that some rather remarkable shipments have gone forward from this country of late. For instance, during last week 85,000 bushels of durum wheat went from New York to St. Petersburg direct, while another and larger consignment destined for the same point left from Port Arthur. In addition, upwards of 188,000 bushels are to leave New York for the Russian capital on or about May 1. Here it becomes quite apropos to remark that while Russia is exporting quite liberally through its Black Sea ports, it is taking in wheat from the United States and elsewhere via the Baltic ports. Another shipment, one that brings the mind's eye back to historic scenes, was made from Philadelphia last week. We refer to the export of 182,000 bushels to Greece, part of the quantity being consigned to Piræus, the ancient port of Athens, and part of it to Volo, upon the gulf of the same name, in historic Thessaly.

It is probable that more general interest would have been felt in the Colonial Conference at London, which began its sittings on April 15, but for the fact that during one whole week representatives of the press were not admitted to report the proceedings, and only a very meager and strictly censored statement of the daily proceedings was given to the public. It was only on Saturday night last that an adequate summary of the proceedings of the preceding week was issued. It seems to have been proposed at one stage to call the conference an "Imperial Council," but this encountered not only the strenuous opposition of Sir Wilfrid Laurier, the Premier of Canada, and of General Botha, Premier of the Transvaal, but the decisive announcement of the Earl of Elgin, the Secretary of State for the Colonies, that the establishment of a body with an independent status of authority would not be acceptable to the central government. It was finally decided on Saturday to change the title of the gathering to "Imperial Conference," and to hold meetings every four years to discuss the common interests of the empire.

A form of constitution seems to have been arrived at under which the premier of the United Kingdom is to be ex officio president and the premiers of the colonies and the colonial secretary will be ex officio members. Other members may be appointed by the various colonies, but without the special permission of the conference not more than two representatives of each government may take part in the discussions. Each government is to have one vote. A permanent secretarial staff is to be constituted, which will be charged with the duty of obtaining information for the use of the conference, conducting its correspondence and dealing tentatively with matters of general interest which may arise in the intervals between the meetings of the conference. When matters arise which require the consultation of two or more governments and cannot conveniently be postponed until the next general conference, it is provided that a subsidiary conference may be held between specially chosen representatives of the governments concerned. A proposition providing for the creation of a general military staff for the empire was tabled on Saturday last, but on Tuesday was adopted with a few verbal changes.

LOWER MONEY AT HOME AND ABROAD.

This week's action of the Bank of England directors was in full accordance with the expectations of the London and New York money markets. The 4½ per cent. discount rate of the institution in question, which was established on April 11, has been reduced to 4 per cent., being the third successive drop in the quotation since January 17 last, when the 6 per cent. rate, established on October 19, was marked down to 5 per cent. Preceding this action on the part of the Bank of England, and serving in some degree as an indication of what its management would do, the Bank of Germany on last Tuesday reduced its official discount figure from 6 per cent. to 5½ per cent., while there was a corresponding lowering of the quotation of the Bank of Amsterdam, the principal institution of Netherlands finance. No change, however, was made in the rate of the Bank of France during the present week. That institution continues to adhere to the 3½ per cent. rate which it established nearly a month ago, and it would, in fact, seem that the position at the French capital, notwithstanding the strength of the Bank of France, continues to make for conservatism on the part of the leaders of the French financial world. It is, in fact, generally understood that there has been no relaxation of the determination already made known on the part of the Bank of France to regain in full the £3,000,000 of gold which was surrendered to the London market last winter, when conditions at the British capital were more or less squally from a money-market point of view. It is, therefore, somewhat doubtful whether the Bank of France will in the immediate future follow the example of the other leading financial institutions of the old world. In spite, however, of this factor in the situation, it looks as if the strain on the foreign money markets had permanently disappeared and that easier conditions will continue to prevail for some time to come. This idea is reinforced by the continued ability of the Bank of England, as referred to in these columns last week, to acquire the bulk of the new gold which is coming in at the London market from South Africa.

Developments like the above have naturally had more or less effect upon the action and temper of the New York money market. This is exemplified by the fact that call money at New York has this week commanded no more than 2 per cent., while time money has been offered with increased liberality and at concessions in most cases from the recent rates. The large increases which have been shown in the item of loans in the New York Clearing House statements of the last two Saturdays and the prospect of a further augmentation of this item in to-day's averages seem to have had little effect upon the tone of the money market. It is fully realized, as has been heretofore explained, that the process represents a withdrawal from the Wall street loan market of the funds placed in that quarter by banks at the interior while they were able to obtain practically exorbitant rates for their money, the sums in question being now taken away because, owing to the present general activity of business throughout the country, it is possible for institutions at the various cities throughout the west and middle west to obtain better rates for them at home than they could do if their balances were allowed to remain in New York. It is, indeed, understood that the large amount of time loans which matured and were paid off had been made by outside institutions. In view, however, of the better conditions abroad, the New York loan market seems to take no alarm at the continuance of this process.

WHOLESALE PRICES FROM 1890 TO 1906.

In its bulletin for March the Bureau of Labor makes another contribution to the body of comparative data regarding wholesale prices which it has been collecting for some years. In this installment it presents actual prices for 1906, together with statistics of relative prices for the seventeen years from 1890 to last year. Prices for 258 representative articles are given in the report, the articles being, with a few exceptions, the same as have been covered in the preceding reports upon the general subject. The results of the investigation indicate that wholesale prices, considering the 258 commodities as a whole, reached a higher level in 1906 than at any other time during the seventeen-year period covered. The average for the year 1906 was 5.6 per cent. higher than for 1905; 36.5 per cent. higher than for 1897, the year of lowest prices during the seventeen-year period, and 22.4 per cent. higher than the average for the ten-year period from 1890 to 1899.

In the year 1906 itself prices reached their highest point in December, the average for that month being 4.1 per cent. higher than the average for the year and 6.3 per cent. higher than the average for December the year before. Notwithstanding the large average increase, the advance in price did not extend to all commodities. Of the 258 articles for which wholesale prices were obtained, thirty showed no change in average price for the year and fifty showed a decrease in price as compared with 1905, while 178 showed an increase. Considering the commodities by groups, only two out of nine showed decreases, namely, farm products and drugs and chemicals. The average wholesale price of raw commodities for 1906 was 3.9 per cent. higher than for 1905, while the average wholesale price of manufactured commodities was 6.1 per cent. higher.

Following a method previously employed by it, the Bureau of Labor has used as a base upon which to compute a table of relative prices the average price of commodities for the ten-year period from 1890 to 1899 inclusive. The relative prices of all commodities as computed on this basis are shown in the following table:

	Relative prices		*Relative prices*
1890	112.9	1899	101.7
1891	111.7	1900	110.5
1892	106 1	1901	108.5
1893	105.6	1902	112.9
1894	96.1	1903	113.6
1895	93.6	1904	113.0
1896	90.4	1905	115.9
1897	89.7	1906	122.4
1898	93.4		

It will be seen from a glance at this table that the relative price of all commodities declined steadily from 1890 till 1897, when the lowest price for the period under consideration was reached, while since the latter date the trend was generally upward, interruptions occurring only in the years 1901 and 1904. The point is brought out that during the last five years covered, for which special comparisons are made, the relative price of not a single group was as low as the base, that is, the average of the ten-year period from 1890 to 1899. Farm products were from 9.9 per cent. to 41.1 per cent. above the base; food, etc., from 2.7 per cent. to 18.2 per cent.; cloths and clothing from 1.5 per cent. to 22.2 per cent.; fuel and lighting from 18.1 per cent. to 78.6 per cent.; metals and implements from 7.6 per cent. to 46.9 per cent.; lumber and building materials from 11.4 per cent. to 43.3 per cent.; drugs and chemicals from 0.2 per cent. to 19.1 per cent.; housefurnishing goods from 8.8 per cent. to 15 per cent.; miscellaneous articles from 9.7 per cent. to 25.8 per cent., and all commodities from 10.3 per cent. to 27.4 per cent. above the average for the ten-year period chosen as furnishing the base.

Regarding the method followed in preparing the tables of relative prices or index numbers, the report says that it has been thought best in preparing the present series, after a careful consideration of all methods of weighting, simply to use a large number of representative staple articles, selecting them in such a manner as to make them, to a large extent, weight themselves. Upon a casual examination, the report says, it may seem that a comparatively unimportant article—such, for instance, as tea—has been given the same weight or importance as one of the more important commodities, such as wheat. A closer examination, however, shows that tea enters into no other commodity under consideration, while wheat is not only quoted as the raw material, but enters into two descriptions of wheat flower, two of crackers, and three of loaf bread. The method of measuring the importance of each commodity by the amount of its annual consumption by the nation was regarded as unavailable for the bureau, owing to the impossibility of securing even approximately accurate figures for the annual consumption in the United States of the commodities included in the compilation.

THE SCOPE OF THE TREATY-MAKING POWER.

In his address as president of the American Society of International Law at its first annual meeting at Washington last week, Secretary Root contributed to the proceedings of that body a careful and valuable statement of the scope of the treaty-making power of the national government. He found a text for his discussion in the recent controversy over the San Francisco School Board resolution directing the segregation of Japanese children in a special Oriental school. Three questions were, he said, raised by the representations of the Japanese government regarding this resolution. Of these, two were questions of the construction of the treaty with Japan of November 22, 1904. Those questions were first, whether the right to attend the primary schools was a right, liberty or privilege of residence, and second, if so, whether the limitation of Japanese children to the Oriental school and their exclusion from the ordinary schools constituted a deprivation of such right, liberty or privilege. The third and most important question, and the one to which Secretary Root addressed himself, was whether, if the treaty had the meaning which the government of Japan ascribed to it, the government of the United States had the constitutional power to make such a treaty agreement with a foreign power which should be superior to and controlling upon the laws of the state of California.

Secretary Root directed attention in the first place to the fact that by the Constitution of 1787 the people of the United States vested the whole treaty-making power in the national government. Under our system, Mr. Root said, legislative, judicial and executive powers are distributed between national and state authorities; the treaty power is not distributed, but is all vested in the national government. While there are no express limitations upon the treaty-making power granted to the national government, there are, it is true, certain implied limitations arising from the nature of the government and from other provisions of the Constitution, but those implied provisions do not touch the making of treaty provisions relating to the treatment of aliens within the territory of the United States. In the next place reciprocal agreements between nations regarding the treatment which the citizens of each nation shall receive in the territory of the other are among the most familiar, ordinary and unquestioned exercises of the treaty-making power. During the history of the United States provisions of this description have been included in its treaties with practically all the other nations of the world. Such provisions had been from time immemorial the subject of treaty agreements among the nations of Europe before the independence of the United States. The power to make such provisions was exercised without question by the Continental Congress in the treaties which it made prior to the adoption of the Constitution, and it is not open to doubt that when the delegates of the thirteen original states conferred the power to make treaties upon the new national government in the broadest possible terms and without any words of limitation, the subjects about which they themselves had been making, the treaties then in force were included in the power.

Furthermore, the Secretary continued, it has been settled for more than a century that the fact that a treaty provision would interfere with or annul the laws of a state as to the aliens concerning whom the provision is made is no impeachment of the treaty's authority. The Constitution, the laws made in pursuance of it and treaties made under the authority of the United States, are declared by Article VI. to be the supreme law of the land, "and the judges in every state shall be bound thereby, anything in the constitution or laws of any state to the contrary notwithstanding," a statement which contemplates a possible conflict between treaties and state laws. Mr. Root cited the early cases of Ware vs. Hylton, decided in 1796; of Fairfax vs. Hunter, decided in 1812, and of Chirac vs. Chirac, decided in 1812, in which the Supreme Court of the United States upheld rights claimed under provisions of treaties in contravention of state laws.

Finally, the Secretary laid down the proposition that since the rights, privileges and immunities, both of persons and

property, to be accorded to foreigners in our country and to our citizens in a foreign country are a proper subject of treaty provision and within the limits of the treaty-making power, and since such rights, privileges and immunities may be given by treaty in contravention of the laws of any state it follows of necessity that the treaty-making power alone has authority to determine what those rights, privileges and immunities shall be. The Secretary here makes his logical circle complete. There seems little room for dissent from his propositions, considered in the abstract. It is of interest to note that Mr. Root commends the procedure by which the specific question touched upon was settled, and that he records the declaration that never for a moment was there, as between the government of the United States and that of Japan, the slightest departure from perfect good temper, mutual confidence and kindly consideration. It is well, however, to ponder some of his closing words, in which he dwells upon the responsibility of the people under the modern régime of democracy. "Foreign offices and ambassadors and ministers no longer keep or break the peace with each other," he says, "but the conduct of each people toward every other." These are suggestive words, which indicate how little it may matter where the power to deal with foreign relations may be legally located if justice and patience and self-restraint do not mark the conduct of the people.

THE BRITISH BUDGET.

The finances of the United Kingdom seem to be in a very satisfactory condition as far as the general results disclosed by the annual balance sheet are concerned. Indeed, the statement given in the recent budget speech of the Chancellor of the Exchequer seems to reflect an unusual degree of prosperity, a condition generally productive of surpluses. For example, Mr. Asquith was able to say, in laying his fiscal proposals before the House of Commons, that instead of an estimated deficit of $230,000 for 1906-07 a surplus was realized amounting to $26,995,000, while for the fiscal year 1907-08 a surplus of $17,165,000 is anticipated. For the latter year the expenditures are estimated at $703,785,000, a reduction of $8,320,000, as compared with those for the preceding fiscal year. The receipts on the existing basis of taxation are estimated at $720,950,000. It is interesting to note, in this day of increasing government outgo, that the Chancellor expressed the hope that the reduction in expenditure would be continuous and progressive, and this in the face of the fact that the permanent reduction in the national debt in the course of 1906-07 amounted to $68,570,000.

Some of the details of the statement regarding receipts are of interest. Unexpected death duties, under which head are grouped probate, legacy and succession duties, were credited with a contribution of about $6,000,000 to the excess over the estimates for the fiscal year ending March 31. Increased receipts from the coal duty and the mint accounted for about $4,000,000 more. The increased receipts from the mint were owing to the demands for coinage on account of the prosperous condition of trade and the large amount of silver, about $2,500,000, required for various purposes in connection with the general election, a statement which caused some merriment among the members. The reduction in the tea duty in the last budget was followed by increased consumption, amounting to 4,500,000 pounds. The revenue from tobacco did not realize expectations, and there was a progressive decline in the revenue from the alcohol group from 1899 until last year. In the latter direction there are, however, signs of a definite reaction, the years 1906-07 showing an increase of $2,470,000 in those receipts. There was a falling off in the revenue from stamps, owing to the slackness of operations on the Stock Exchange, and the fact, worthy of note, that the telephone is superseding correspondence by mail.

Looking to the future, Mr. Asquith said that the paramount duty of the government was the further reduction of the national debt, but behind all that was the unconquered territory of social reform. The chancellor declared that he was not a socialist, but that nothing appealed to him and his associates so loudly and imperiously as the possibility of social reform. In behalf of the government he declared that in the sphere of finance the ministers regarded old age pensions as the most serious and most urgent of all the demands looking to such reform. He would not commit himself to any specific scheme for the purpose, but it was the hope and intention of the administration before the close of the next session of Parliament to lay a firm foundation for that project. Out of his disposable surplus, about $9,165,000, he proposed to invest $7,500,000 in the sinking fund and set it aside for old age pensions next year. Premising that he looked for a reduction of the national debt by $85,000,000 this year, the chancellor said that he could not do anything involving a permanent reduction of the revenue. He did not purpose to make any change in indirect taxation, but he proposed to deal with the incidence of the income tax and to differentiate between earned and unearned incomes, and to revise the death duties, so as to make the larger estates pay heavier rates than the smaller ones. This budget, the first Liberal one presented in a dozen years—for last year's represented a legacy from the preceding administration—has been looked for with unusual interest in England. Some impatience is manifested by the labor representatives with the treatment of the old age pension question, but others will reflect that taking the statement of Mr. Asquith to have been sincerely made, the ministry is setting its face toward new ways.

PROSPERITY IN ENGLISH COTTON MANUFACTURING.

Manchester, April 12.—Trade continues prosperous, and in nearly all directions activity prevails. All spinning and weaving machinery that can be got to work is running at full speed. New looms and spinning factories are starting as quickly as machinery can be supplied, but machinists are much behind hand in contract time for delivery. In the weaving department operatives are scarce, and, as a matter of fact, looms are here and there standing idle for want of workpeople. Quite a number of new concerns have to start, and it is a question as to where the hands will come from. Manufacturers who use bought yarn are compelled to buy good qualities in order to satisfy their employees. During the past few months several strikes have occurred owing to alleged inferior quality of yarn. In the spinning department there does not seem to be much difficulty in commencing new mills, but as there are nearly 4,000,000 spindles projected, it remains to be seen how such mills will get a full complement of operatives. Mill floating has at last come to an end, as the high prices quoted for new machinery are considered prohibitive. Compared with five years ago, spinning machinery is estimated to be not far off 50 per cent. higher than then, and it is the same in cloth making.

A feature is the lessened takings of cotton goods by China. The United States has recently shipped less than usual. Stocks in Shanghai are still moderately large, but the tendency is for them to decline in bulk. Manchester for some time has been a little concerned at the successful competition of America in the China market, and it is felt in Lancashire that in several styles of cloth the United States has got a firm hold in the far East. Our manufacturers as a body are not experiencing as wide a margin as a year ago. This applies to makers who buy yarn. The high prices prevailing for twist and weft are considered abnormal. Those weaving firms who also have spinning machinery to supply looms are doing much better. The margin between raw cotton and cloth is still remunerative.

Spinning in all its branches is in a strong position, and profits accruing have been perhaps larger than at any period in the history of the trade. The quarterly stock-takings just completed have shown enormous gains. In a total of twenty average concerns the total gain for the last three and six months shows on capital employed a profit of about 30 per cent. per annum. These concerns have paid dividends of about 10 to 15 per cent., placing the balance to the reserve fund.

Shipping yarns have latterly been in extensive request for the continent, notably Russia, Germany and Austria, and there has been an exceptional demand in the finer numbers from the United States.

Higher wages are being demanded by the workpeople throughout the industry. The weaving section have asked for a raise of 5 per cent., which has been refused. It is not, however, likely that employers who use bought yarn—and they are the majority—will consent to even compromise the 5 per cent. advance demanded. The card-room hands have made a request for 5 per cent. advance, it being twelve months since a similar request was granted. The operative spinners, which have a separate organization, have asked for a 20 per cent. advance in 60's twist and above. The next few months will be a period of unrest in the trade in respect to wage matters.

Our shipments of piece goods and of yarns are not on so large a scale this year as in 1906. The following table is of interest:

	March, yards	*Three months ended March 31, yards*
Piece goods		
1907	566,641,200	1,617,627,000
1906	573,603,600	1,639,018,700
1905	539,795,800	1,530,740,100
Yarns	*Pounds*	*Pounds*
1907	18,507,100	53,039,300
1906	19,031,900	55,108,700
1905	18,311,100	48,934,600

It is noteworthy that so far this year the United States has taken from us 28,472,000 yards, as compared with 25,029,000 yards in the same period of last year and 16,207,800 in the first three months of 1905.

EDITORIAL NOTES.

Formal announcement was made this week that a committee headed by Mr. J. N. Wallace of New York, representing the financial interests which recently negotiated a tentative settlement between the Chicago Union Traction Company and the Chicago municipal authorities, is prepared to receive deposits of the stocks of the company under an arrangement which contemplates the ultimate formulation of a reorganization plan for the company. It cannot be said that the terms of the announcement, or the prospect for a satisfactory settlement, have aroused much enthusiasm in financial circles. The terms under which holders of the Chicago Union Traction stocks are asked to deposit their certificates with the Central Trust Company of New York on or before May 15, leave much to be desired in respect to definiteness. It is not set forth with any clearness whether there is to be an assessment on the stock, or, if so, what limit as to amount may be involved. It must be recognized, of course, that the committee is entitled to have a free hand in this and other matters. In fact, under the provisions of the ordinance of the Chicago city council, which is the basis of the whole matter, there is still room for lengthy negotiations and a settlement of details, which are as yet in an incoherent state. The general feeling on the subject is, of course, that a full and satisfactory settlement will be reached, and to Chicago citizens, at any rate, the prospect of having, in time, a local traction service equal to that which is enjoyed by many less prominent municipalities, is something which outweighs all other considerations.

More or less attention has been given to talk of a prospective valuation of railroad properties by the Department of Commerce or the Interstate Commerce Commission as part of a movement by the government to determine the reasonableness of the existing scale of rates. Now it is intimated that certain companies, among which the Pennsylvania and the New Haven system are mentioned, have determined to take action in this direction of their own accord, although it has been denied that either of the roads in question, as was suggested this week, have employed Mr. Stevens, late chief engineer of the Panama canal, for the purpose of conducting an independent valuation. One of the most striking contributions to this subject takes the form of a report by an investigating committee of the Minnesota Senate, which has valued the roads of that state at $215,000,000, or approximately $27,000 per mile, while it states that the lines are capitalized in bonds and stocks at about $400,000,000, or an average of $50,000 a mile. The net earnings per mile, according to the findings, averaged last year about 18 per cent. upon the committee's valuation of the roads. The committee states that in arriving at these results it took into consideration the original cost of the properties and the

improvements and equipment added thereto, together with the expense of operating and earnings under existing rates, also the stocks and bonds which have been issued and the value thereof, the recommendation being that a further investigation be authorized by a commission having power to go more fully into the subject and make suggestions for further appropriate legislation, such as may be deemed advisable in conformity with the facts. It is noted that a large portion of the report is devoted to criticism of the Chicago Great Western Railway, which is the subject of a great many strictures on the part of the committee, on the ground that its capital has been unduly inflated, although why this company should be particularly singled out is not disclosed. In the absence of the full text of the report and a full knowledge of the way in which the committee handled the subject, it would be unsafe, however, to accept the conclusions without reserve, and it is also worthy of consideration that in cases like that of the Great Western system, the market value of its securities eliminates in a practical way much of the force of the argument that the road's stock and bond capital has been unduly inflated.

Combining the income accounts of the fourteen railroads which now make up the New York Central lines, otherwise the Vanderbilt system of railways, the results for the year 1906 are no less favorable than those which were displayed when the returns for the year of the New York Central & Hudson River Railroad were examined separately. In the aggregate the gross earnings amounted to over $225,500,000, an increase of $18,800,000, of which gain $12,600,000 was from freight traffic, while $5,300,000 was derived from passenger transportation. The net earnings were $55,600,000, an increase of $5,000,000; the miscellaneous income $12,700,000, a gain of $1,900,000, and the total income $68,300,000, which was $7,000,000 larger than the same item for the combined companies in the preceding fiscal and calendar year. Charges and taxes amounted to $43,300,000, being $1,900,000 greater, and the dividend payments, which aggregated $18,000,000, also showed an increase of $2,589,000. Despite this, the surplus reached a total of $6,900,000 for the year, an increase of $2,400,000, and out of the surplus of the united companies $5,300,000 was deducted for improvements.

Reports about the formation of a coastwise steamship trust have been rife for some months past. A certain amount of support was lent to these rumors by some transactions in connection with properties of that description, including the purchase of the Boston Steamship Company by the New York, New Haven & Hartford Railroad and its retransfer by the original purchaser to the Merchants' and Miners' Transportation Company of Baltimore, in which organization the New Haven road acquires a half interest under the deal. The present week, however, brings definite news about the plans of what is known as the Morse interest, which has been popularly, and with entire probability, identified with the principal efforts to form a combination of the steamship lines engaged in the carrying trade between New England ports and other maritime cities on the Atlantic seaboard. The formal announcements in this respect relate to the exchange of the stocks of the Clyde line, the Mallory line, the Metropolitan Steamship Company and the Eastern Steamship Company for 4 per cent. bonds of the new combined company, which is to take over the vessels and business of the foregoing organizations. It is stated that the large majority of the stockholders of the different companies have already assented to this plan, and the expectation is that all but a very small amount of the stocks covered by the arrangement will be deposited for exchange. There is no very clear idea as yet about the plans or policy which the promoters of the combination will pursue, but the presumption is that greater efficiency and a lower working cost will compensate for the increase in the capitalization, which seems to be one of the chief features.

Opposition has been offered to the plans of the Calumet & Hecla Mining Company, the largest, most celebrated and best paying of the Upper Michigan copper mining concerns, for acquiring the control of other producing companies in that district. Through the purchase of a controlling interest in the Tamarack and other mines in the same locality, and their transfer, together with a considerable portion of the Calumet & Hecla's undeveloped ground, to a subsidiary organization known as the La Salle Copper Company, it was arranged to keep a large proportion of the Michigan copper range production in the hands of the parent company. Little doubt seems to exist that the possibility of control by other large copper interests in this field had a great deal to do with the action of the capitalists identified with Calumet & Hecla, but it is rather interesting to learn that the legal proceedings to nullify the arrangements in question are taken on the ground that the plans of the Calumet & Hecla capitalists constitute the creation of a trust in the lake copper region.

When imports of luxuries undergo expansion the tendency is to credit the enlargement to prosperity and the desire of the people to have imported things even if they do come high. But recent developments indicate that the import of one item—champagne—can fall off and still leave "old general prosperity" a greater field marshal than ever. Thus, in 1906, which was a record year for industry and commerce, imports of champagne declined 81,444 quarts from the imports of 1905, while for the nine months of the fiscal year ending March, 1907, the falling off was 165,612 quarts. The single month of March, 1907, showed a decrease of 31,920 quarts compared with March, 1906. It is worth noting that champagne importations of 1906 were but 27 per cent. greater than those of 1900, although the importation of all articles classed as luxuries was practically 55 per cent. greater than that of 1900, and of general merchandise an increase of 60 per cent., indicating that the importation of champagne has not kept pace with that of other luxuries or the great group of articles forming the total imports into the United States in the period from 1900 to 1906. The country goes on consuming champagne, but the tendency is to patronize home industry, at least this may be inferred from a statement issued by the Bureau of Statistics of the Department of Commerce and Labor, which suggests that the manufacture of genuine champagne wine in the United States has quadrupled in the last decade, that the product now exceeds 2,000,000 bottles per annum, including in this class only the wine fermented in the bottle and not that charged with carbonic acid gas by artificial methods, and that this increase in home production is the principal cause of the slow growth in importation. New York state is the largest producer of American champagne, being responsible for probably 66 per cent. of the output, and the industry is centered partly in Orange county and partly in Steuben county. The other one-third is produced chiefly in northern Ohio, Missouri and California. The area in which conditions are suited to the production of champagne is estimated as sufficiently large to render possible an enormous increase in production, the growth being at present limited by the fact that large sums of capital are required for its successful and profitable production. The following table shows the importations of champagne and other sparkling wines into the United States in each calendar year, ending with December 31, from 1890 to 1906:

	Doz. qts		*Doz. qts*
1890	403,777	1899	277,421
1891	329,410	1900	310,433
1892	356,556	1901	324,124
1893	287,443	1902	365,614
1894	265,763	1903	380,891
1895	249,507	1904	384,844
1896	232,662	1905	401,514
1897	216,106	1906	394,727
1898	241,949		

Much interest has been taken in a report which came from abroad during the present week that the flotation of a large issue of New York, New Haven & Hartford 4 per cent. bonds in the Paris and other continental markets of Europe had not been such a success as was represented when the announcement was made a few months ago that the company in question had followed the example of the Pennsylvania and successfully placed the issue with French bankers. The allegations on this score were that while the Parisian financial interests which were identified with the transaction took the equivalent of $20,000,000 of the new bonds, they failed to exercise an option which they had upon another equal amount thereof, the further claim being that the bonds had not proved as easy to distribute among French investors as was thought would be the case. It is pointed out that the issue was one which would be distinctly attractive to the foreign financial public, the bonds being free from payment by their holders of various taxes which appertained to the securities of foreign corporate securities in the hands of French investors, and that the only drawback would seem to be lack of knowledge on the part of the latter as to the merits and stability of the New Haven as a railroad property. Further examination of the subject, however, does not lead to the conclusion that these allegations are altogether well founded. It is, of course, possible that under the circumstances the bonds might have proved to be what Wall street is accustomed to call a slow sale, and the matter was probably complicated by the fact that the Paris investment market is at present in a rather lethargic condition. It seems unnecessary, however, to conclude that there has been anything approaching a partial failure of the issue in that market.

The United States will not lack for distinguished representatives at the Peace Conference at The Hague. The list of its delegates is headed by Mr. Joseph H. Choate, the former ambassador to Great Britain and always a leader among American advocates. With him is fitly named the late brilliant ambassador to France, Gen. Horace Porter. Among the other members are Mr. David J. Hill, a former diplomat and professor of international law; Gen. George B. Davis, a former judge-advocate general of the United States army and also a former professor of international law; Admiral Sperry, the president of the Naval War College; former Minister Buchanan, whose experience in Latin-American diplomacy has been prolonged; U. M. Rose, of Arkansas, formerly president of the American Bar Association; Mr. Chandler Hale, of Maine; Mr. James Brown Scott, solicitor of the Department of State, and Mr. Charles H. Butler, reporter of the United States Supreme Court. The Russian delegation is headed by M. Nelidoff, the ambassador to France, and includes among its membership Professor De Martens, the leading Russian authority on international law. It is expected that the former will be chosen president of the conference. From day to day dispatches tell of the selection of delegates from various countries, small and large, but the list is not yet complete.

Fuller returns of foreign trade for March and the nine-months' period merely accentuate the importance of the foreign demand for raw cotton in the total export trade of the month, because showing that exports of crude raw materials for use in manufacturing (raw cotton contributing 85 per cent.) gained $15,586,000, while raw cotton exports gained $16,560,000. The gain in all exports over a year ago was $16,282,000, and the entire gain was therefore less than the increase in cotton alone. Food products exported fell off enough to offset slight gains in exports of manufactured goods. Every branch of import trade gained during March, and the same is true for the nine months. Following are the details of imports and exports for March and the nine months:

IMPORTS.		
March	1906	1907
Foodstuffs, crude	$11,948,511	$13,542,075
Foodstuffs, prepared	12,103,252	14,143,680
Crude materials for manufacturing	41,279,187	47,849,509
Manufactures for manufacturing	18,729,748	24,722,729
Manufactures for consumption	28,382,160	31,602,835
Miscellaneous	1,154,719	1,250,224
Total imports	113,597,577	133,111,752
EXPORTS.		
Foodstuffs, crude	$16,176,199	$14,258,780
Foodstuffs, prepared	27,836,205	28,653,327
Crude materials for manufacturing	35,265,378	50,851,359
Manufactures for manufacturing	21,226,730	23,227,788
Manufactures for consumption	41,905,295	42,046,238
Miscellaneous	951,160	605,003
Total domestic exports	143,360,967	159,642,405
Foreign merchandise exported	2,149,740	2,108,439
Total exports	145,510,707	161,750,934
IMPORTS.		
Nine months ending March	1906	1907
Foodstuffs, crude	$105,828,519	$112,418,200
Foodstuffs, prepared	101,884,965	110,629,289
Crude materials for manufacturing	303,855,988	355,239,436
Manufactures for manufacturing	159,242,143	203,945,163
Manufactures for consumption	234,913,458	274,712,372
Miscellaneous	7,830,024	8,902,151
Total imports	913,555,097	1,065,846,611
EXPORTS.		
Foodstuffs, crude	$144,803,892	$126,834,832
Foodstuffs prepared	266,349,138	259,562,768
Crude materials for manufacturing	407,320,279	497,905,743
Manufactures for manufacturing	165,038,129	191,627,881
Manufactures for consumption	337,383,104	352,019,365
Miscellaneous	3,984,185	4,738,752
Total domestic exports	1,324,878,727	1,432,689,341
Foreign merchandise exported	19,023,363	18,276,464
Total exports	1,343,902,090	1,450,965,805

RECENT LEGAL DECISIONS.

[*Prepared for* BRADSTREET'S.]

Limitations—Debtor's Action—Preference.

The Kentucky Court of Appeals held, in the case of Smith's Adm'r vs. Huntsberry, that an action by a debtor against a creditor to set aside a conveyance under sections 1910 and 1911 of the Kentucky statutes, alleging that it was made with a view of preferring such creditor over his other creditors, must be commenced within six months after the date of the conveyance.

Husband and Wife—Title—Sale.

The Maryland Court of Appeals held, in the case of Jordan vs. Reynolds et al., that when a husband and wife hold property as tenants by the entireties they can give a purchaser thereof a good and merchantable title notwithstanding there exists an outstanding judgment against the husband, and that a decree requiring the specific performance of a contract of sale by a purchaser under such circumstances should be affirmed.

Sale—Promise—Record—Performance.

The Supreme Court of Louisiana held, in the case of Lehman vs. Rice et al., that a promise of sale amounts to a sale in the sense that it gives the purchaser the right to demand a specific performance of the obligation to transfer and deliver the property; that where the conditions have been performed the legal title passes as of the date of the original agreement; that a promise of sale duly accepted and recorded confers a real right on the purchaser of which third persons are bound to take notice, and that such right cannot be defeated by a subsequent sale of the same property recorded prior to the execution of the deed pursuant to the promise of sale.

Insurance—Recovery—Limitation—Suicide

The Supreme Court of the United States, in the case of Whitfield vs. Aetna Life Insurance Company of Hartford, Conn., held valid the Missouri law permitting recovery for the full amount of an insurance policy in case of suicide, notwithstanding any proviso to the contrary contained in the policy. The court, speaking through Mr. Justice Harlan, said that the provision of the law forbidding any insurance company doing business within the state from using suicide as a defense, unless it was shown that the insured contemplated suicide at the time the policy was issued, was a legitimate exercise of power by the state, and that the limitation fixed by the policy was an attempt to evade its provision.

Taxation—Federal Bonds—Savings Banks.

The general exemption with which the bonds of the United States are clothed entitled savings banks holding them to deduct the amount of such bonds from the value of the shares of their stock which are assessed to them for purposes of taxation, according to the decision of the Supreme Court of the United States in the case of The Home Savings Bank vs. The City of Des Moines. The effect of the decision is to render invalid the Iowa law taxing the shares of savings banks. The court, speaking through Mr. Justice Moody, said that "if by the simple device of adopting the value of corporation shares as the measure of the taxation of the property of the corporation, that property loses the immunities which the supreme law gives to it, these national securities may easily be taxed whenever they are owned by corporations, and the national credit has no defense against a serious wound."

Consignment—Carrier's Liability.

The case of The United Fruit Company vs. The New York & Baltimore Transportation Company, decided by the Court of Appeals of Maryland, arose out of a suit against the appellee, a common carrier, to recover the value of certain goods and merchandise shipped to the appellant in Baltimore, which, after being unloaded from the steamer and stored on the appellee's wharf, was destroyed in the great fire of February, 1904. It appeared that the goods reached the appellee's wharf early on the morning of Friday, February 5, 1904; that the appellee then offered to deliver them to the consignee according to its accustomed mode of delivery, and that the consignee received timely notice on that morning that the goods had arrived. The goods were not, however, delivered on that day because of the consignee's express request that they be held by the carrier, and the appellee agreed to hold them until the following Tuesday at the appellant's risk, the latter agreeing to defray the expense of transferring them from the appellee's to the appellant's wharf. The goods were destroyed by fire while still in the possession of the appellee, though without its fault. The trial court granted an instruction to the effect that at the time of the loss of the goods the appellee held the same as a warehouseman and not as a common carrier, and that as there was no evidence legally sufficient to prove that the loss was due to any negligence on the part of the appellee, the verdict must be in its favor. The Court of Appeals affirmed a judgment rendered in accordance with this instruction, holding that the same had been properly granted.

Treaty Rights of Foreigners.

The Supreme Court of Pennsylvania held, in the case of Maiorano vs. Baltimore & Ohio Railroad Company, that the provision in the treaty between the United States and the Kingdom of Italy stipulating that the citizens of Italy in the United States shall enjoy the same rights in the protection of their persons and property which the citizens of the United State enjoy, applies only to citizens of Italy who as to their persons or property are within the jurisdiction of the United States, and that under that treaty a non-resident alien who is a citizen of Italy has no standing to maintain an action under the Pennsylvania act of April 26, 1855, for the recovery of damages for injuries to another, causing death.

Sale—Implied Warranty—Cable.

The Supreme Court of Indiana held, in the case of Oil Well Supply Company vs. Watson et al., that where an article of a particular kind is sold at a sound price for a particular purpose known to the seller, and it is impracticable, or no opportunity is afforded, to inspect the property before delivery, and the article has been kept on sale as suitable for said purpose, there is an implied warranty that it is reasonably fit for the purpose intended, even though the article is not manufactured by the seller, but is of a special brand produced by the manufacturer and known to the seller and asked for by him. In the case before the court the plaintiff sold to the defendant a steel cable of a certain brand 1,400 feet long, weighing 2,010 pounds, and wrapped in burlap, for use in drilling gas wells, both parties relying on the known merits of cables of that brand. The particular cable proved to be rotten and worthless, and the court held that the breach of an implied warranty was available as a defense to an action for the agreed price.

Telegraph Company—Messengers—Fraud.

The Appellate Division of the New York Supreme Court for the First Department held, in the case of Wilmerding et al. vs. Postal Telegraph Cable Company, that where telegraph messengers having direct authority to collect upon genuine slips or bills, present, intermingled with genuine slips, forged slips not distinguishable upon ordinary examination from the genuine slips, their acts are within the apparent scope of their authority, and their employer may be held liable to refund the money paid by an innocent patron or customer upon the forged slips. The court held that an employer who has put it within the power of his employee to defraud by intermingling fraudulent and genuine bills and collecting money therefrom should be held responsible to an innocent third person for loss sustained through the dishonesty of such employee, and that where a special agent acts within the apparent scope of his authority the responsibility of the employer for his acts is the same as for the acts of a general agent.

Nuisance—Rendering Plants—Discomfort.

The Supreme Court of Louisiana held, in the recent case of Perrin vs. Crescent City Stockyard & Slaughterhouse Company, Limited, that a use of property which materially interferes with the physical comfort of those who live in the neighborhood or which impairs the enjoyment of their homes may be a nuisance, even though it does not impair their health or result in driving them from their homes, and that the mere fact that other nuisances exist in the same locality which produce similar results is no defense of the nuisance complained of. The case was one in which a property owner residing in the vicinity of the defendant corporation's plants brought suit to have a fertilizer and tallow-rendering plant carried on by the latter at its abattoir declared a nuisance and abated. The plaintiff obtained a preliminary injunction which was subsequently made permanent absolutely as to the fertilizer plant and modified as to the tallow plant, though a demand for damages was rejected. This action of the court below was affirmed by the Supreme Court.

BUSINESS NOTES.

Production of Copper.

The *Engineering and Mining Journal's* final figures on the production of copper in the United States in 1906, compared with the figures for 1904 and 1905, are given in the following table, in pounds:

	1906	1905	1904
Alaska	8,700,000	4,703,600	2,043,586
Arizona	263,200,000	222,866,024	191,602,958
California	24,421,000	16,697,489	29,974,154
Colorado	9,565,000	9,854,176	9,401,913
Idaho	9,493,000	6,500,000	5,422,007
Michigan	224,071,000	218,999,753	208,329,248
Montana	299,850,000	319,179,885	298,314,804
New Mexico	6,262,000	5,638,842	5,368,666
South and east	18,821,000	14,997,982	15,211,086
Utah	49,712,000	51,950,789	47,062,889
Wyoming	146,000	2,393,201	3,565,629
Other states	*3,379,000	1,550,000	1,418,065
Total	917,620,000	875,541,741	817,715,005

*This figure includes 400,000 pounds of copper produced in the form of bluestone, and also considerable copper which belongs not to "other states," but to those above enumerated, to which, however, it cannot be accurately allocated.

World's Hop Crop.

According to the Department of Agriculture, England, Germany, the United States and Austria-Hungary, in this order, together grow 86 per cent. of the world's total yield of hops. England produces 28.1 per cent., Germany, 23.3 per cent. and Austria-Hungary, 14.4 per cent. The districts of the United States given to this crop are northern New York and the Pacific states of Washington, Oregon and California. Taking recent growth into account, the world's crop is now about 175,000,000 pounds, about 65,000,000 pounds, or 37½ per cent. of which goes into international trade. The largest buyer of foreign hops is the United Kingdom. In the international demand different brewing localities have a preference for the products of certain countries as against others. The British brewer prefers American hops, and the American brewer those of Austria-Hungary and Germany.

Our Exports of Manufactures to Mexico.

The Mexican official statement shows that American manufacturers have found a remunerative field in that country. Of the total imports into that republic, amounting to $108,598,506 in the six months ended December 31, 1906, the United States sent $67,275,176, or 62 per cent. Especially worthy of note among the imports is the railway equipment from American producers. For eight months of the current fiscal year American locomotives have been placed there to the extent of $988,696, which compares with $189,000 for the eight months ended February, 1906, an increase of $799,696. Steel-rail orders placed there have been $739,855, which compares with $1,120,613 for the eight months ended February, 1906, which was a period of exceptionally heavy steel-rail orders. The year 1905 was more normal, showing an aggregate of $317,593 for eight months. Up to March, 1907, from July 1, 1906, orders for passenger and freight cars were $1,520,941. This compares with $680,244 in 1906, and $410,283 in 1905. Considering these items, the total value of Mexican railway equipment filled in this country during the past eight months reaches nearly $3,250,000.

Open-Hearth vs. Bessemer Steel.

This table shows the relative growth in the output of Bessemer and open-hearth steel, and incidentally the exhibit furnishes a graphic idea of the great progress attained by the open-hearth article. In other words, from being one-eighth of the total of Bessemer and open-hearth in 1890, the latter grew to one-fifth in the next five years, and in another five years to a third. Now it is within a step of parity with Bessemer, and the prospects indicate that the output of open-hearth will surpass that of Bessemer within a few years. The figures are in gross tons:

	Bessemer	*Open-hearth*	*Per cent. open-hearth*
1890	3,688,871	513,232	12.2
1895	4,909,128	1,137,182	19
1900	6,684,770	3,398,135	33.7
1901	8,713,302	4,656,309	34.8
1902	9,138,363	5,687,729	38.3
1903	8,592,829	5,829,911	40.4
1904	7,859,140	5,908,166	43
1905	10,941,375	8,971,376	45
1906	12,275,253	10,970,998	47.2

In this connection it is interesting to note, says the *Iron Age*, that "while the steel production of the United States was reckoned to be about 40 per cent. of the world's total production in 1903—or 14,534,978 tons out of 35,846,000 tons—the great increase in domestic production in 1905 and 1906 has put this country in the position of now contributing nearer one-half than two-fifths of the world's steel. In 1905 the world's steel production was estimated at 43,500,000 gross tons. Last year it was probably not far from 49,000,000 tons, and this country's contribution was about 47.5 per cent. The steel production of the United States doubled between 1900 and 1905, being in round numbers 10,000,000 tons and 20,000,000 tons in these years, respectively. In a single year it has covered one-third of the distance between 20,000,000 tons and 30,000,000 tons, which latter was the mark a well-known steelmaster of the United States set in 1901, the year the Steel Corporation was organized, to be attained by this country by 1910. What was at the time regarded as exuberant optimism is now within reasonable promise of fulfillment, even with fair allowance for the expected recession. Of the total of 10,970,998 gross tons of open-hearth steel made last year the Steel Corporation contributed 5,438,494 tons, or 49.5 per cent., a loss of practically two points from its percentage of 51.4 in 1905. In Bessemer steel the corporation's percentage also fell off, being 65 7 for 1906, against 67.4 for 1905. The decline in the corporation's proportion of the total steel output of the country, accented last year, is shown strikingly in the following figures:

	Per cent. Bessemer	*Per cent. open-hearth*
1902	73.9	52.4
1903	72	51
1904	69	50.4
1905	67.4	51.4
1906	65.7	49.5

Milling Machinery Imported from Mexico.

Consul-General C. Hanna, of Monterey, writes that it will doubtless be of interest to people in the United States to learn that Mexico has begun to export machinery, concerning which the *Torreon Star* says: "Something out of the ordinary took place at Durango recently, when from that city an article manufactured there was sent to Austin, Tex. This is probably the first exportation to the United States of machinery manufactured in Mexico, and may open a new era. A Durango concern recently began the manufacture of middlings mills and nixtamal mills. It is said that the middlings mill is destined to supplant many stands of rolls in flour mills, because, it is claimed, it does the same amount of work with one-fourth of the power, and with the additional advantage that it does work no rolls can do and solves the problem which vexes all mills, that of grinding sharp middlings. It is believed that the invention will become a big factor in the flour-mill industry of the world. The nixtamal mill is having a big sale. These mills are designed so that each will properly fulfill its own peculiar sphere in the grinding business. With the combination of the two they are said to be unexcelled for grinding food products such as middlings, nixtamal, spices, malt, cottonseed meal, salt, sugar, chile, coffee, etc."

Commerce and Navigation.

The Bureau of Statistics of the Department of Commerce and Labor gives a summarization of the year by ports, showing that New York continues to handle about two-thirds of the entire foreign commerce of the United States, its aggregate trade in 1906 having been equivalent to 66 per cent. of the whole, compared with 7 per cent. for Boston, 6 per cent. for New Orleans, 5¾ per cent. for Galveston, 5 per cent. for Philadelphia, 4¾ per cent. for Baltimore, nearly 3 per cent. for San Francisco, 2¼ per cent. for Savannah, 2 per cent. for Puget Sound, 1 1-3 per cent. for Detroit, and a little over 1 per cent. for Buffalo, in a total foreign commerce of $2,970,000,000. Considering exports only, the rank of the various ports or customs districts and the percentage of the total exportations sent through each are as follows: New York first, with about 35 per cent.; Galveston second, 9½ per cent.; New Orleans third, 8 2-3 per cent.; Baltimore fourth, 6 1-3 per cent.; Boston fifth, 5 2-3 per cent.; Philadelphia sixth, 4¾ per cent.; Savannah seventh, 3¾ per cent.; Puget Sound eighth, a little less than 3 per cent.; San Francisco ninth, 2¼ per cent., and Detroit tenth, 2 per cent. The general currents of the export trade may be inferred from the figures showing the exports by principal sections. Atlantic coast ports are credited with 61 per cent.; gulf ports, 21 per cent.; northern border and lake ports, 10 per cent.; Pacific coast ports, 6 per cent., and Mexican border ports, 2 per cent. Many cities conducting a large business in the commodities entering into the import, and especially the export, trade do not receive credit therefor, as their receipts or shipments in the foreign trade must of necessity be credited to the ports established for the official measurement of that commerce.

CURRENT BUSINESS NEWS.

Commercial.

A San Juan, Porto Rico, dispatch, dated April 22, indicates that drought is affecting the sugar plantations of Porto Rico. No rain has fallen in the southern districts of the island for six months, and the loss is estimated at 40 per cent. of the value of the crops. Next year's crops will also be affected. The establishments dependent on mountain streams for power have been forced to shut down owing to lack of water.

For the first three months of 1906 the exports of Peru amounted to $6,600,000. Of this, $2,500,000 was to the United Kingdom, $1,700,000 to Chile, $680,000 to the United States, $551,335 to France, $490,000 to Germany, and $14,000 to Japan. The imports during the same period amounted to $6,500,000. Of this amount, $1,600,000 was from the United Kingdom, $1,500,000 from the United States, $1,100,000 from Germany, $600,000 from Chile, $380,000 from France, $380,000 from Australia, $230,000 from Belgium, and $70,000 from Hongkong.

Foreign crop conditions, as published Tuesday in Broomhall's Liverpool *Corn Trade News:* United Kingdom, France—The cold weather is checking the growth of the plant. Supplies are more scarce and holders are firm. Germany—The crops are backward as the result of continued cold weather and supplies of native wheat continue to be very scarce, with an advance in price. Hungary—Latest reports show further deterioration in wheat and the damage may amount to 20 per cent. The outlook for the spring crops is favorable. Roumania—The weather has now turned fine and seeding is progressing favorably. The winter crops are backward. Supplies are small. Russia—Crop prospects are unchanged. Italy and Spain—Some complaints are heard, but, on the whole, the outlook is generally fair. North Africa—The outlook for the crops is, on the whole, fair. India—Weather conditions continue to be very unsettled.

The *Lokal Anzeiger* of Berlin says that after seven hours' deliberation at the Ministry of the Interior Monday, the German Economic Commission, which had under consideration the new commercial agreement between Germany and the United States, agreed to the proposed provisional agreement, which, after being signed by the German Chargé in Washington and Secretary Root, will be submitted to the Reichstag. No doubt is felt as to its acceptance by the Reichstag, and then all fear of a tariff war between Germany and the United States will be over for a year.

The weekly summary of weather conditions issued by the Weather Bureau Tuesday says: "The week ending April 22, 1907, is the third consecutive week of abnormally cold weather in the districts east of the Mississippi. The period from the 8th to the 22d was abnormally cold throughout sections east of the Rocky Mountains. The last seven days had a mean temperature considerably below normal in the plateau regions, and in all districts to the eastward, with the exception of Florida, the temperature was decidedly below the normal, the most marked deficiencies occurring in the central valleys. General weather conditions of the week were unfavorable in nearly all districts east of the Rockies, but on the Pacific coast and in the southern plateau region were favorable. Freezing weather prevailed as far south as northwestern Texas, the central Mississippi and upper Ohio valleys, western North Carolina and to the New Jersey coast, with heavy frosts as far south as Arkansas and Tennessee. Except in the Gulf states and over the southeastern Rocky Mountain slope, where precipitation was much above the normal, the week was generally dry, large areas in the central valleys and lake region receiving no rain or only inappreciable showers. There was also a practical absence of rain on the northern New England coast, in southern Florida, southern Oregon and over the western portions of the central and southern plateau regions and in California. The drought in the central gulf districts has been relieved, but rain is needed over a large part of the upper Mississippi and lower Missouri valleys. Snow and sleet occurred over a large part of the central valleys on the 16th and 18th, and scattered hailstorms in the south Atlantic states on the 18th. There was much cloudiness in the south Atlantic and gulf states, but ample sunshine in the central valleys."

The Prussian official report makes the condition of winter wheat 60, against 78 last year; rye 72, against 76. The winter-wheat crop of the whole German Empire last year was 131,000,000 bushels, and the winter-rye crop 373,000,000 bushels.

We call attention to the table given below, taken from the April issue of the *Government Crop Reporter* showing the disposition of the Durum wheat exported from this country from July 1, 1906 to March 15, 1907, practically all of which was shipped out by Duluth houses. The quantity exported to each country during the period of 1906-7 above mentioned, was as follows:

	Bushels
Italy	*6,208,095
France	2,803,516
Germany	1,007,134
United Kingdom	702,918
Netherlands	583,594
Greece	488,826
Malta	344,913
Belgium	266,844
Spain	236,259
Tunis	169,573
Algeria	40,000
Destination not ascertained	1,506,999
Total	14,358,671

*Including one consignment to Trieste, Austria, and one to Barcelona, Spain.

Most of the tobacco warehouses in the Connecticut river valley have been closed, and the work of assorting last year's crop has been practically finished. Considerable tobacco still remains in the hands of the farmers on account of the deadlock over prices. A larger part of the Havana seed leaf has been sold, but it is estimated that at least half of last year's harvest of broadleaf is still in the possession of the growers. The tobacco raisers are now devoting their energies to preparing for this year's yield. The acreage will be slightly in excess of that of last year. Some restriction, however, has been placed on the size of the tobacco fields this season, on account of the high price of fertilizers and the scarcity of farm help. The preliminary preparations for planting have been retarded by the backward spring.

Newspaper reports indicate that demand for diamonds has declined considerably, and it is said that the change is being felt with much severity in Holland and Belgium, where factories have shut down, and others are working on part time. The workmen are looking forward eagerly to the summer invasion of Europe by American tourists, in the hope that it may give an impetus to the trade.

The grain commissioner of Manitoba and the Territories says that from the present indications it looks as if upwards of 10,000,000 bushels of old wheat would be in the country September 1.

The Standard Oil Company Wednesday advanced the price of the Ragland grade of crude petroleum 8 cents, making the quotation 70. There was no change in the other grades.

The Imperial Statistical Bureau of Germany returns crop conditions in the empire as follows: Winter wheat, as of April 15, 66, against 84 on November 15 last, and 78 on April 15, 1906; winter rye, as of April 15, 72, contrasted with 84 on November 15 last, and 78 on April 15, 1906.

Recalling the work of the British Cotton Growing Association, the Rt. Hon. David Lloyd-George, president of the British Board of Trade, said, on Thursday, at the exhibition of the association, which is being held under the auspices of the Board of Trade, that the value of British-grown cotton this year was expected to be $2,500,000, as compared with $1,000,000 in 1906 and $750,000 in 1905.

The Swedish parliamentary committee appointed to discuss the duty on corn has reported in favor of a reduction of the tax from about 92 cents to about 38 cents per hundred kilograms. It is expected that this action will greatly increase the importation of American corn.

Financial.

In order to find how conservative bankers in the west and southwest view the trade situation the New York *Journal of Commerce* recently conducted an investigation, the result being some very interesting information. From the views collected one may gather that bankers are confident as to the future business situation, but are inclined to be more conservative. Thus far, western institutions find slight signs of recession. Nevertheless, there is some hesitation about continuing the enlargement and improvement of plants, and crop prospects are naturally a matter of immediate concern. Money is easier, but there is no large surplus and there is no more in sight than will be needed for next fall's crop movement. The cumulative effects of high prices are looked upon as being a permanent factor in the money situation. It is declared that inherent conditions are sound and that return to a normal volume of business would be welcome.

A seat on the New York Stock Exchange sold for $79,000 on Monday, that quotation comparing with $78,500, the last previous sale.

On Monday the authorized capital stock of the Nipissing Mines Company was reduced one-half, to $6,000,000. The $6,000,000 of stock thus retired never had been issued.

The American National Bank of San Francisco has issued an instructive booklet on the financial power of San Francisco and its growth in that respect since the catastrophe of April, 1906. One item of interest is the deposit growth of the American National Bank itself, which is shown to have been as follows:

March 3, 1902	$387,728.70
September 15, 1902	1,374,983.43
March 15, 1903	2,232,582.04
September 15, 1903	2,629,113.39
March 15, 1904	3,586,912.31
September 15, 1904	3,825,471.71
March 15, 1905	4,349,427.92
September 15, 1905	4,938,629.05
March 15, 1906	5,998,431.52
September 15, 1906	6,959,266.24
March 22, 1907	8,051,646.71

The new issue of German empire and Prussian government 4 per cent. five-year treasury notes has been greatly over-subscribed. Subscriptions, according to advices received here, were received to the extent of about thirty times the total issue. Subscribers agreeing to withhold from the market their allotments for six months will be favored, and their subscriptions will find consideration ahead of those who desire unrestricted bonds. The participation in this new loan in this country has been a rather small one, owing to the fact that our investment market at present offers opportunities more remunerative as to interest return, and more attractive as to price.

Securities of the International Mercantile Marine Company, which have been dealt in on the curb since the organization of the company, have been admitted to the New York Stock Exchange list. The securities are $52,744,000 4½ per cent. bonds, $51,730,000 preferred stock, $49,921,800 common stock and $19,618,000 International Navigation Company 5 per cent. bonds. The committee on stock list is empowered to add from time to time $22,256,000 4½ per cent bonds, $8,269,000 preferred stock, $10,067,200 common stock and $103,000 International Navigation Company bonds.

Announcement was made on Thursday that the syndicate headed by J. P. Morgan & Co., which underwrote the $35,000,000 4 per cent. Lake Shore debentures, will be dissolved on May 1. It was learned that the syndicate, which purchased the bonds at 98½ and interest, had disposed of only a small part of the issue. The present price is around 96¾ to 97. All of the $50,000,000 Lake Shore debenture 4s authorized in 1903 are now outstanding. Of the entire issue $40,000,000 were sold to take up the $25,000,000 short-term loan made in connection with the purchase of Reading. The balance were sold to take up floating indebtedness and to raise funds for improvements.

Life insurance companies having headquarters at Dallas have instructed their representatives to prepare to leave the state because of the signing of the Robertson bill by Governor Campbell.

The Bank of England on Thursday reduced its minimum rate of discount to 4 per cent. from 4½, at which rate it was fixed on April 11.

Industrial.

Production of refined lead in the United States during the last two calendar years is thus set forth by the *Engineering and Mining Journal,* (in tons of 2,000 pounds):

Class	1906	1905
Desilverized, domestic	220,095	205,665
Antimonial, domestic	7,434	8,456
Southeast Missouri	100,492	81,299
Southwest Missouri	16,528	21,324
Miscellaneous	980	3,000
Total, domestic	345,529	319,744
Desilverized, foreign	67,441	83,504
Antimonial, foreign	2,686	2,730
Total, foreign	70,127	86,234
Grand total	415,656	405,978
Total, antimonial	10,120	11,186
Total, soft	118,000	102,623
Total, desilverized	287,536	289,169

The British exports of pig iron for 1906 were 1,667,431 tons, compared with 983,306 tons in 1905. One reason for these enlarged exports is the cheaper freight rate by ocean. On this account it is possible for the Scotch producers of iron and steel to sell to San Francisco in competition with American producers. The ocean rate from Scotland to the Pacific coast is $5.90 per ton.

The Swedish government plans to establish a labor bureau in connection with the embassy at Washington through which Swedish emigrants here can find places at home if they have any desire to turn back. A Budapest dispatch to the Chicago *Daily News* tells of special effort in Hungary to apply capital in manufacturing enterprises in order to quicken the home demand for labor, and so check emigration.

From the returns compiled by Lloyd's Register of Shipping, it appears that, excluding warships, there were 585 vessels of 1,306,087 tons gross under construction in the United Kingdom at the close of the quarter ended March 31, 1907. Particulars follow:

Steam	*March* 31, 1907 *No.*	*Gr. t'nage*	*March* 31, 1906 *No.*	*Gr. t'nage*
Steel	525	1,290,325	510	1,394,128
Iron	1	500	1	500
Total	526	1,290,825	511	1,394,628
Sail				
Steel	36	13,758	17	5,376
Iron	..	....	..	....
Wood and composite	23	1,504	19	1,878
Total	59	15,262	36	7,254
Total steam and sail	585	1,306,087	547	1,401,882

The vessels now under construction are 139,000 tons more than those which were in hand at the end of December, 1906, but this tonnage is still nearly 96,000 tons less than that for the end of March, 1906. Returns are supplied, so far as they have been received, of shipbuilding abroad. The following are the figures for the principal countries, the totals for three previous years being given for comparison:

	1907 *Tons*	1906 *Tons*	1905 *Tons*	1904 *Tons*
United States	158,827	90,552	46,306	122,935
Germany	198,690	284,433	204,626	134,545
France	83,506	27,888	69,440	99,630
Italy	70,883	54,005	69,060	21,341

Railroads.

Boston's street railway system has shown in the past ten years a growth from 304 miles of surface track to 441 miles and sixteen miles of elevated, from 2,360 to 3,468 cars, from 172,000,000 passengers and $8,536,285 earnings to 262,000,000 and $13,527,185, from 23,777,726 free transfers and twelve transfer stations to 150,000,000 transfers and sixty-two stations, from seven power stations of 25,000 horse-power to ten stations of 60,000 horse-power, from 228 to 306 snow plows and from 5,095 to 7,727 employees.

The Pennsylvania system owned on April 1 of this year 223,743 cars, or 18,354 more than on April 1, 1906. On April 1 of this year, however, there were 80,302 cars belonging to the Pennsylvania in use on other lines, whereas there were on that date only 56,663 foreign cars on the Pennsylvania lines. Measures will be taken by the Pennsylvania to correct this condition and obtain a fairer share of its equipment.

Miscellaneous.

In a recent address delivered at Rochester, N.Y., Louis Wiley, advertising manager of the New York *Times,* said the city of New York has a population of about 4,000,000, and the number of copies of New York morning newspapers sold in the city is 750,000. The number of agate lines of advertising space in the New York morning newspapers in February, 1906, was over 3,500,000, while that of the evening newspapers was 2,500,000 lines. Evening newspapers appear six days of the week, while morning dailies publish on seven days. The annual expenditure for advertising in the newspapers of the city of New York is greatly in excess of $10,000,000. The annual receipts from newspaper sales in the city of New York are not much over $3,000,000. The annual expenditures of the New York newspapers are probably about $10,000,000. Receipts from circulation in the main represent the profits of the newspapers. To the newspapers which are sold for 1 cent per copy the news companies pays 50 cents per 100, which rate scarcely pays for more than the white paper used in the production of the newspaper.

An idea of the value as old material of discarded war vessels was recently furnished at an auction sale at Chatham Dockyard, England. The first-class twin-screw battleship Sans Pareil, built in 1888, at a cost of about £750,000, first came under the hammer and was sold for at £26,600. It should be explained, however, that stipulations governing the sale prohibited the vessels from being taken out of the United Kingdom, and required that the guns and gun mountings and the 14-inch torpedo tube should be broken up prior to the ship leaving her moorings. The third-class twin-screw armored battleship Conqueror, built in 1887, at a cost of nearly £500,000, brought £16,800, and the twin-screw first-class armored cruiser Undaunted, built in 1888, at a cost of about £280,000, was bought for £14,400.

STATE OF TRADE.

[A Summary of Special Telegrams to BRADSTREET'S.]

Weather conditions this week, as for nearly a month past, have been a bar to retail trade activity and to seasonable crop development throughout a wide area. In jobbing and wholesale trade lines filling-in orders are in smaller volume than expected, but business, as a whole, is good for a between-seasons period. There is still a marked scarcity of goods needed for prompt delivery and much cross buying between different jobbers and sections of country. The feeling appears to be that with warm seasonable weather now due a considerable expansion in buying operations and in collections is to be looked for. This improved buying has, in fact, materialized where a few days of good weather have intervened, and it is worth noting that despite the bad crop reports from the southwest buying from that section in the leading markets is still confident.

In manufacturing lines the story is one of filled order books and of backward deliveries. In cotton goods and finished iron and steel products production is still heavily sold ahead, and where fall trade is inquired into a total volume fully equal to, and in most lines in excess of, a year ago is indicated. Money is easier at all markets, but shifting of loans from west to east points to many banks being well loaned up. Collections improved in spots and this tendency is apt to gain with favorable weather. Deliveries of farm products are larger, and the wheat movement for the fiscal year is at last in excess of a year ago, but the large deliveries in the northwest are asserted to be from interior elevators rather than from farmers, color being given to this view by the bad roads in that section. Clearings reflect the effect of dullness in stock speculation in totals smaller than a year ago, but outside of a few large cities increases are still very general. Crop and weather conditions largely dominate the speculative markets, securities being dull, while grain and cotton are higher. Higher prices for vegetables are a reflection of smaller supplies, predicated, apparently, on crop damage, while refined sugar is quieter on fruit-damage advices. Dairy products are higher on smaller receipts. The crop-outlook question naturally tends to exercise a larger influence upon business commitments. There is a disposition, also, to regard the backward crop condition at present as not being a serious one, it being, for instance, pointed out that larger areas in corn and oats may eventuate from ascertained losses in wheat. It is also to be pointed out that large supplies of cereals in farmers hands preclude scarcity, even if crop damage results, while enlarged demand would in that event guarantee high prices for the available surplus.

Poor crop reports and better export demand evoked by these and correspondingly poor reports from abroad put wheat prices up 4 cents this week. Dry-weather reports from Kansas and Nebraska, claims of bug damage in the southern part of Kansas and Oklahoma, reports of winter-killing revealed by late growing weather in Indiana and Ohio, and advices that seeding is progressing slowly in the northwest were some of the bullish features of the week. Against these was cited the very heavy movement of wheat from the interior last week and this, receipts being more than double those of a year ago in the same time. The bearish claim was that the farmers would not be selling so freely if the crop conditions were as bad as claimed, but against this was advanced the suggestion that some of this movement was due to delayed interior elevator shipments made possible by better car conditions. This week, for the first time since early in the cereal year, the total year's receipts of wheat exceed those of last cereal year. Good export inquiry is a feature, said to be due to foreign recognition of the American crop situation and doubts as to good returns from European crops, which have cold weather to contend with. The advance in wheat since April 1 is 5 cents. Corn was advanced 1½ cents, and oats were put up ½ cent. Provisions were irregular on varying hog receipts, but are firmer on the whole, and cotton-seed oil was put up 1 cent.

Continued cool weather and reports that instead of the crop being earlier than a year ago it was now really later, having lost ground in the past three weeks, added to light receipts and heavy demand for actual cotton, caused a slow but gradual advance in cotton this week, futures gaining 8 to 10 points and spots 5 points. Old crop months showed most strength.

Refined sugar has been quiet, reflecting talk of frost damage to fruits, and there has been some irregularity in prices, which are 5 points lower. Raw sugar closes 3 points lower on large Cuban receipts. Coffee is slightly firmer, but spot prices are unchanged, while futures are 10 points up.

Domestic wool is quiet, while stocks are light and selections are becoming poorer. Sales made are for immediate requirements only. However, quarter-blood fleeces, chiefly Michigan and Ohio, are more active than other grades, but many bids have been refused because they were too low. Foreign wools are also quiet, and the small sales made are mainly fine merino and high crossbreds. New Zealand crossbreds, largely low crossbreds, are in full supply, and are a drug on the market. In the west dealers and growers are deadlocked on the price situation, hence little has been done in the way of sales. Shearing is general in Texas, California, Nevada, Utah and Wyoming. In Texas growers want 20 to 22 cents, but bids are at 18@19 cents. New California wools, which are of good quality, bring about last year's prices. Half the Utah clip is under contract, nevertheless wool is accumulating. In Nevada sales are being made at 16½ to 18 cents, which basis is lower than last year's. The London sales open Tuesday, and New Zealand grades are expected to open about 10 per cent. lower. On the other hand, fine merinos and high crossbreds are expected to open very firm.

The market for leather is of a between-seasons character. A few large manufacturers have covered their requirements, but the majority are still holding off. Prices have not receded to any extent, though some special lots have been disposed of at a concession, but high-grade goods are firmly held. Union sole leather is in pretty good demand for fall business. Oak sole is quiet, and rough leather is slow and not often bringing full quotations. Large contracts for grain leathers for fall goods are under consideration, but buyers are unwilling to pay full prices. Hides are quiet, buffs being weak, with packers a shade firmer. Shoe manufacturers are receiving many mail orders and some supplementary trade from salesmen. While a few factories are working to normal capacity, the majority are not averaging better than two-thirds. Fall buying is not yet general, but business is expected to begin in earnest about May 1. Shipments of footwear are about 2 per cent. below those of last week, but are 13.7 per cent. over those of the like week last year. For the season the record is 3 per cent. behind that of last year.

The labor situation is one of great strength. Strikes are notably few for a May 1 period, and while railroad retrenchment makes for a larger supply of unskilled labor, the skilled branches are very well employed.

Low temperatures or dry weather still retard western crop progress, and the season as a whole will be late, instead of early as promised some time ago. April, as a whole, has not been a good month for the crops anywhere. In the northwest freezing temperatures and snow have made the spring-wheat seeding time late. Snow has helped grain but injured fruit in Colorado and Nebraska. Snow and rainfalls are only partial in Kansas, which state also reports green bugs appearing and the weather too cold for the enemies of these parasites to keep down damage. The central and southern parts of the state need rain badly. Only half a crop of wheat is possible in Oklahoma, and the oats crop has been badly hurt. Rains have helped wheat in Missouri, Indiana and Ohio and may offset some winter-killing damage. Unless the weather prevents much wheat land will be planted in corn and oats and record acreages in those crops are likely. Fruits appear to have been hurt seriously throughout the west. Texas corn and cotton have been helped by recent rains, but need warm weather. Heavy rains and cold weather retard planting in Louisiana, Arkansas and Alabama. Complaints of rotting seed come from parts of the south, which also report good seed for replanting scarce. Southern fruits and vegetables have been hurt by cold weather and following heavy rains.

In a way, the pig iron markets are quiet, although further large sales of Bessemer pig have been made in the Pittsburgh district. Delivery is for the second half of the year, and the business was taken at an advance of $1 per ton. Outside of the Pittsburgh district trade is dull. Demand for foundry iron for far-distant delivery is backward, though inquiries for a large tonnage are numerous enough, but buyers and sellers seem far apart as to prices. However, spot supplies are scarce, and as a result consumers are forced to go over-sea for supplies. Four cargoes of English iron are due to arrive in Philadelphia some time in May. Steel is still very scarce, and Bessemer billets are up 50 cents at Pittsburgh. Additional sales of steel rails for delivery this year are light; but one leading railway company has contracted for 153,000 tons for 1908, or 17,000 tons less than was originally ordered by the same company for 1907. Of course, the company reserves the right to take a certain amount over or under the tonnage stated. Orders for structural material are very heavy, and plates command high premiums for prompt delivery. Bar iron is lower, but steel bars are active, although implement makers have not fully covered their requirements and are hoping for concessions. Merchant pipe is very active, and in some sections prices are up $2 per ton. The outlook for cast iron pipe is excellent. Tinplate mills are getting large orders for the second half of the year. Cotton ties are up 10 cents per bundle as compared with last year's price. Coke is weak, but producers are not disposed to book contracts for distant dates at the lower prices. Anthracite coal has been in good demand, owing to cold weather, but bituminous is quiet and easier in price. Copper is higher, not because of any large business developing, but because inquiries for prompt shipment are more numerous. At the same time, sales over-sea have expanded.

While dull and narrow, the New York stock market manifests a strong undertone, and prices have materially advanced in some cases. Trading, however, is professional and centers in a few issues, Union Pacific being the most prominent. Adverse legislative action has been responsible for decided weakness in Brooklyn Rapid Transit and Chicago Great Western. Sentiment, however, was favorably influenced by easy money and good business prospects, adverse crop reports from certain sections having apparently little weight. Foreign exchange is strong on demands for remittances caused by the repayment of foreign loans. Demand sterling is 4.86.20.

Bank clearings for the week ending April 25 aggregate $2,621,745,000, 13 per cent. under last week and 14 per cent. below this week last year. Outside of New York exchanges amount to $1,059,280,000, 8 per cent. less than last week but 8 per cent. over the corresponding week last year.

Business failures for the week ending April 25 number 157, against 167 last week, 177 in the like week of 1906, 193 in 1905, 197 in 1904 and 173 in 1903.

Wheat, including flour, exports from the United States and Canada for the week ending April 25 aggregated 2,580,242 bushels, against 3,102,467 bushels last week, 2,149,684 bushels this week last year, 1,260,316 bushels in 1905 and 3,750,589 bushels in 1902. For the past forty-three weeks of the fiscal year the exports are 141,565,731 bushels, against 111,501,401 bushels in 1905-06, 52,313,210 bushels in 1904-05 and 211,819,878 bushels in 1901-02. Corn exports for the week are 1,611,041 bushels, against 1,939,622 bushels last week, 1,428,921 bushels a year ago and 1,885,766 bushels in 1905. For the fiscal year to date the exports are 59,610,242 bushels, against 102,802,028 bushels in 1905-06 and 67,163,410 bushels in 1904-05.

IN CANADA.

Warmer weather has helped trade in Canada, and good reports as to fall business come from travelers on the road, but the strike of coal miners in British Columbia mines against a reduction in wages threatens to tie up business in the western half of the country. In addition, one large western road is badly congested, and efforts are being made to borrow motive power. General complaint of slow deliveries by manufacturers comes from all leading markets. Montreal reports retail trade helped by warm weather, fall business in dry goods turning out well and some improvement in collections. Large shipments of butter have been made to New York. Toronto complains of slow deliveries of goods, building is active, and Ontario collections are better. An increased area in wheat is expected in Manitoba and the northwest, despite fears that cold weather may delay seeding. Collections are still slow at Winnipeg. The coal strike in British Columbia renders the fuel question for the railways a very serious one. It is hoped a compromise can be reached, however. Failures for the week number 23, as against 18 last week and 22 in this week a year ago. Clearings aggregate $75,109,000, a decrease of 3 per cent. from last week, but a gain of 6 per cent. over this week a year ago.

THE CROPS.

COLD WEATHER RETARDS SPRING-WHEAT PLANTING. WINTER WHEAT GETS SOME MOISTURE IN NEBRASKA AND KANSAS, BUT NEEDS MORE AND WARMER WEATHER. BUGS IN SOUTHERN KANSAS. EARLY FRUITS REPORTED BADLY HURT BY COLD WEATHER. SEASON A LATE ONE ALL AROUND. MUCH LAND WILL BE REPLANTED IN CORN AND OATS. HEAVY RAINS AND COLD WEATHER RETARD COTTON PROGRESS. ROTTING SEED COMPLAINED OF.

CHICAGO.—Winter-wheat crop prospects are less promising, due to cold weather, temperatures all over the country being five to fifteen degrees below normal. Precipitation in most sections is also under normal, which may be a feature in later crop developments. Oklahoma prospects are for 25 per cent. of a winter-wheat crop, and 25 per cent. to a complete failure in oats. Scattered rains fell in Kansas and Oklahoma, but not enough to do material good. Green bugs continue to spread over Kansas, thus injuring the crop in the southern section 20 to 25 per cent., with indications that Kansas will go the same way as Oklahoma, as the weather is too cold to permit of rapid development of the green bugs' enemies. Nebraska had a fall of one-half to eight inches of snow, which benefited the crop, but more moisture is needed. Damage, so far, slight. Scattered reports of damage by winter-killing come from Illinois, Missouri, Indiana and Ohio, but recent rains have bene-

fited the crop. Growth generally is slow in all grains. In the northwest seeding is late but is progressing slowly, and two weeks of good weather will see the bulk of the crop seeded. The Canadian northwest is one to two weeks late, which may mean a reduction in acreage. Oats were damaged more or less by recent cold weather, and reseeding has been under way. Plowing for corn is progressing favorably, and indications point to an increased acreage, as much of the abandoned wheat land will go into corn and some into oats. With favorable weather the largest acreage ever put into both is likely. Fruits have been injured by freezing weather, and late reports from Colorado say the damage is extensive.

ST. LOUIS.—Reports from the winter-wheat section indicate some damage to the growing crop, due principally to the unseasonable weather. However, the damage is believed to be less than 20 per cent. compared with the crop of last year, which was a large increase over 1905. Much stress is being laid on reports of damage by bugs in the southwest by bull speculators, but it is the general opinion that the entire loss of the Texas and Oklahoma crops would not be felt in the general crop, provided other states had a yield equal to last year.

INDIANAPOLIS.—Reports as to the wheat crop in Indiana continue rather gloomy, especially those from the northern, eastern and central parts of the state. In some quarters the farmers have plowed up the land and sowed corn. In the western and southern parts the crop is reported to be in a very fair condition. Despite gloomy reports good authorities are inclined to feel optimistic, and believe that the crop as a whole will be better than appearances would indicate.

ST. JOSEPH.—The condition of wheat in this entire territory is reported good. There are no bugs here, and no injury has been caused by frost, but it is thought growth has been somewhat retarded by cold. More moisture is needed in places, but with future favorable conditions prospects are good.

CINCINNATI.—The crop situation continues with little apparent change. If any, the opinion is that it is for the better.

DENVER.—Recent rains and snow were very beneficial to winter wheat, particularly in the dry farming belt in eastern Colorado. The wheat crop in southern Colorado is seriously damaged by insects. Fruit was more or less damaged by recent severe frosts. However, general crop indications seem good.

KANSAS CITY.—While some damage has been done to growing wheat by the green bug in southern Kansas, more alarm is expressed on account of the drought in the central and southern portions of the state. Rain is badly needed throughout this section and in Oklahoma.

OMAHA.—Fruit, especially peaches and pears, has been badly damaged by cold weather. Oats are also reported to have been injured. Winter wheat has not made much progress the past week, but it is still in good condition.

ST. PAUL.—Seeding is nearing completion in southwest Minnesota, and is in progress in other parts of the state, except northern Minnesota. A little seeding is being done in southern North Dakota, but most of the state is still covered with snow, there being banks eight feet high. In northeastern North Dakota the ground is not frozen, and as soon as snow disappears seeding will begin.

MINNEAPOLIS.—Agricultural conditions are not particularly favorable through the northwest, principally because of the continued cold weather. It is too early yet to talk about acreage for the same reason. Some seeding has been done, but it is only in scattered localities. With warm weather there will be a material change.

MILWAUKEE.—The agricultural situation is undetermined, as the season is backward with winter cereals and but little has been done otherwise to show progress.

TERRE HAUTE.—The tomato crop has been hurt by continued cold weather. Hopes for a fair yield of fruit are entertained.

SIOUX FALLS.—Cold weather has retarded farm work, and some damage to seeding from freezing is reported.

WICHITA.—Southern Kansas wheat is threatened by drought but not seriously damaged yet, though green bugs have arrived. In northern Oklahoma oats have been destroyed and half the wheat has been killed by bugs. Much ground has been replanted to corn. The freeze has about killed fruit and berries.

NASHVILLE.—The fruit crop is damaged considerably through this section.

OKLAHOMA.—Continued cold and unseasonable weather retards the growing crops. The ravages of the green bug continue in some localities, and 30 to 50 per cent. damage to the wheat crop is conceded.

SIOUX CITY.—The weather is cold and dry and not conductive to crop growing. General opinion is that frost did not hurt oats or wheat, but fruit has been injured somewhat.

SAN FRANCISCO.—The fruit outlook is fair to good, excepting apricots, the ripening of which will be later than usual.

DAVENPORT.—Farm work is well advanced, but barley, oats and wheat are backward. Fruit, especially cherries, is damaged in some localities.

CHARLESTON.—Cabbages are being shipped in large quantities and are bringing good prices. The potato and cucumber crops were considerably damaged by light frost and it will be late in the season when they are brought on the market.

RICHMOND. — Continued cold weather has retarded the planting of crops, injured tobacco-plant beds and hurt the fruit crop throughout the south Atlantic states.

ATLANTA.—The weather is more favorable for cotton planting.

BIRMINGHAM. — Fruit has been greatly damaged by cold weather.

MONTGOMERY.—Cold weather the past ten days has retarded farming operations, and very little progress is being made. The majority of those who had planted corn and cotton will have to replant.

MOBILE.—Rainy weather the past week damaged young cotton and vegetables and also retarded farm work considerably.

LITTLE ROCK.—Rain has prevented any large amount of planting, and it is believed that considerable seed has decayed in the ground and will have to be replanted.

NEW ORLEANS.—Low temperature has prevailed throughout the month of April, and for three days there has been incessant rainfall, covering practically the entire area tributary to this market. It is expected that much cotton will be damaged by these extraordinary conditions, and replanting will be seriously affected by a shortage of good seed. Sugar cane and rice are still doing well.

FORT WORTH.—Rains the past week materially benefited growing crops, which had begun to suffer.

DALLAS.—Light rains have fallen throughout this district, considerably benefiting both cotton and corn. Both of these crops are not only in need of more rain but of warmer weather.

WACO.—Rains covering this entire section assures about three-fourths of a crop of wheat. Young corn was greatly benefited. Practically all cotton is planted.

SPOKANE.—Winter wheat looks promising. In some sections frost has hurt fruit.

TRADE REPORTS.

At New York trade in cotton goods continues to maintain the lead in the dry-goods market, but a good business is transacted in the various other lines, though the strong demand from some sections for goods appears to be to some extent abated. Silks continue in good request and prices are firm. Dress goods are also active, but the clothing trade is quiet. Collections generally are good. There is not much demand for women's hand-made hats, but the machine-made article is selling well. Retail millinery is brisk. Manufacturers of shirts, gloves and hosiery have an active trade and jobbers of hosiery and knit goods say they have more orders than they can fill. Some prominent firms show a disposition to be more conservative in their credits, though all admit that present conditions are favorable. In wholesale notions business is brisk and fully up to expectations. Manufacturers of buttons are working to the extent of their capacity. Wholesale grocers report trade slow, but retail business is active. Confectioners are doing a full average trade. There has been an increase in the receipts of beef on the hoof, but demand and price are sustained. Dressed meats are in full supply and firm. Flour is dull. A strong demand for butter with light receipts advanced the price 4 cents. Receipts of eggs are very large, and considerable quantities are being stored. Potatoes are in very active demand, the latter being in excess of the supply despite advanced prices. The china and glass trades are quiet, and collections are rather slow. Hardware is very active, and business is in excess of that of last year, but complaints of slow collections are heard. Electrical houses report a fair volume of business, and structural steel is in more active demand. Lead is being bought, but spelter is quiet. Pig iron is in fair request, and scrap metals are stronger. Cotton yarn and warp are asked for in quantities, and the market is steady. Manufacturers of cotton duck have all the business they can handle. Jute cordage has advanced half a cent a pound, and manufacturers find it difficult to keep deliveries up to demand. Jewelry is active and conditions are satisfactory, but only a moderate business is done in diamonds. The leather market is dull, tanners are curtailing their output and hides are weaker. In the paper trade, mills are still behind in their deliveries, but there is some falling off in the number of new orders received. Leaf tobacco is in only moderate request, high prices holding manufacturers off. Plans have been filed for the erection of several new mercantile buildings, but there is still some weakness among speculators.

The following telegrams show trade conditions at the cities mentioned for the week ending April 26:

BOSTON.—Sales of spring dry-goods and wearing apparel were halted during the month by cold weather, but it is felt that only higher temperature is needed to restore activity. Retailers are well stocked. Among jobbers there is a scarcity of goods in many lines, especially of cottons, and the tendency of prices is still upward. Staple prints are very strong and there is belief that higher prices are to prevail. Ginghams, as for a long time past, are firm. Wash fabrics for the spring of 1908 are being offered at 20 per cent. advance over this year's prices, but there is conservatism in buying at present, and orders being placed are confined mostly to such lines as are to be limited in product. Wholesale trade in men's clothing and furnishings is temporarily dull. The average shoe factory is not producing more than two-thirds its full capacity at present time. Supplementary spring orders are numerous, but fall buying has not yet started in volume, and will not until between May 1 and 15. Leather is quiet but firm. Recessions in prices are largely on special lots. Buff hides are weak, packer hides a shade firmer. A slight falling off in demand for chemicals is noted, but movement is still satisfactory. Business in dyes and tanning materials is as active as usual. Trade in furniture and kindred lines has been retarded by delinquent spring weather, but business is of fair volume, with collections a little slow. Copper and other metals are steady. Structural steel is active. In building materials the brick business is very active, with many large orders ahead. In lime better prices are quoted. In painters' supplies an improved business is reported, with prospects of a good season. Anthracite coal dealers report activity, but bituminous is very quiet. The season is backward for both southern and suburban produce.

PROVIDENCE.—Cottons are strong in demand and price, with some advances in the latter. Boot and shoe wholesalers report good trade. Collections are slow.

PORTLAND, ME.—General business conditions have considerably improved during the past two or three weeks. Country roads have greatly improved. Three million bushels of potatoes remain unsold in Aroostook county, and prices are advancing. Sardines packers in a few instances have started operations, but fish are scarce. Collections are still slow.

PHILADELPHIA.—Wool stocks are small and trade is quiet. Textile manufacturers report a little easing up in the demand for goods, and there is not so much machinery running overtime. Cotton yarns are in demand, but in some numbers, more particularly in coarse yarns, there has been some concession in price. Dry-goods jobbers report a fair trade; collections not much improved. Flour is steady and millers are not disposed to push sales, anticipating an advance. Business is moderate, consumers being well supplied. Chemicals and dyestuffs rule firm under more active demand. Paints and glass are more active this week owing to improved weather conditions, and the market rules strong. Lumbermen report good business, but the demand has fallen off to some extent, though there is no quotable change in prices. Collections are slow, and the tendency is to contract credits somewhat. Market conditions remain unchanged in hides and skins, and show slight improvement. Leather demand is spasmodic, prices showing no change. Wholesale and retail shoe dealers report increased business, due to weather conditions, which are now more favorable and conducive to spring business. Tobacco is quiet. Liquors are dull. There has been no change in iron, which continues very active. Prices are still strong. Notwithstanding warmer weather, trade for domestic coal has been stimulated by reduction in prices, and for bituminous there is a fair demand with satisfactory prices.

PITTSBURGH.—In the iron and steel market strong conditions are maintained and mills and furnaces continue active. During the week sales of Bessemer iron aggregating 10,000 tons were made at average prices for third-quarter delivery, and negotiations are pending for a considerable tonnage for last half. There are numerous inquiries for third and fourth quarter iron, and owing to the limited supply, prices on both Bessemer and basic iron have been advanced to $23, valley furnace. Coke continues in good supply and prices are weak. Nominal quotations for pig iron at the valley furnaces for spot delivery are as follows: Standard Bessemer, $23; chilled basic, $23; No. 2 foundry, $24, and gray forge, $22. Standard Connellsville furnace coke is quoted at $2.65 to $2.70, and foundry coke at $3.50, at the ovens.

BALTIMORE.—With the advent of seasonable weather a slight improvement is noted in wholesale and retail trade. The month, however, owing to cold weather, has been somewhat of a disappointment, and collections have been poor in most lines. This is reflected in increased demands made on local banks, who are unable to meet full requirements, as the usual applications for discounting on May 1 are already in hand. Business in crockery and glassware holds up well, but business in South Carolinia has been curtailed owing to crop conditions. An improvement is noted in factory deliveries. Paper at wholesale is active, prices rule firm and steady, with collections fair. Business in millinery jobbing lines is brisk, notwithstanding the season is well advanced and business shows an increase over 1906. The season in fertilizers has not been as good as anticipated, wet weather being one cause. Receipts of leaf tobacco are light; stocks, however, find ready sale at good prices. In clothing a fair volume of fall business is reported, but complaint is made of slow collections, with retail business unsatisfactory, due to weather conditions. This latter has also curtailed filling-in orders generally received by dry-goods and notions firms.

CINCINNATI.—Business shows more animation. While collections still drag they show improvement. Money is easy.

CHICAGO.—Production and consumption of all merchandise continues large and satisfactory. Jobbers report good sales, although in dry-goods and other lines the big business for immediate delivery is over. Buying for fall shipment is larger than last year, and merchants with extensive southwestern connections say there is no let up in purchases by interests there. Cotton goods continue firmly held. Active buying and specification continue as features of the iron and steel trade.

Predictions of increased business and higher prices are heard on the one hand and the reverse on the other. Local mills are sold up on steel plates for balance of year. Jobbers have advanced steel sheets $2 to $5 per ton, owing to slow deliveries, and an advance in plates is expected. Pipe and boiler iron meet heavy demands, and 12,000 tons of cast steel pipe were sold. Implement makers are slow to cover requirements for bars for the coming year, but are good buyers for immediate delivery. Structural material meets with increased demand, with orders afloat for 3,500 tons, and it is expected that contracts for material for the new Western Indiana depot will be given out soon. The American Car Foundry Company has orders for 80,000 cars, or within 20,000 cars of its annual capacity. Sales of pig iron exceeded 10,000 tons for delivery in last half on the basis of $22.50 for No. 2 northern foundry. Spot iron is also selling well. Traction rails are in active request. Wire and wire products are having active sale at full prices. Cold weather has held the coal trade in larger volume than usual. Lumber business is increasing, and firmness in values prevails. Groceries are having a good sale. Butter and egg prices are irregular. Potatoes are higher in the face of heavy receipts. Money is easier, but demand is lighter. Banks are closely loaned up. Western paper is being sent east, as rates there are lower. Collections are fair.

LOUISVILLE.—Business in all manufacturing and jobbing lines is good. Fall business in dry goods, shoes, shirts and clothing is starting finely. Clothing manufacturers have more fall orders than ever before at this season. Straight whiskey advanced sharply after the regulations as to labeling under the Pure Food law were published. All leading distillers report that their output hardly supplies the demand, and that the business of bottling in bond under government supervision has doubled in the past year. Trade in drugs and groceries is satisfactory. Retail trade is backward, owing to cold weather. Collections from the south are slow, caused, it is thought, by adverse weather conditions keeping the merchants from disposing of their spring stocks.

INDIANAPOLIS.—In the implement trade business is very good, collections being quite easy. In the iron trade business is reported fair to very fair, but money is rather tight.

TERRE HAUTE.—Activity is evident among manufacturers and distillers. Scarcity of labor in some quarters is still complained of. Launching of new enterprises has occasioned much early spring building, the records showing a decided increase over a year ago.

ST. LOUIS.—General trade conditions are not so satisfactory as during the previous weeks of this year. Continued cold weather has had a depressing effect on retail trade, which is now being felt among manufacturers and jobbers. However, manufacturers of shoes report a slight increase over last year, while jobbers of dry goods report no improvement over last year's business. Building material continues active, and prices are firm. Manufacturers of clothing report good advance orders for fall shipment, which would indicate a large business for the coming season. Collections are slower than last week, but this is attributed to unseasonable weather.

KANSAS CITY.—Wholesalers of dry goods report a material increase in immediate shipments over the corresponding period of last year. Orders for future delivery from salesmen in all textile lines show a healthy growth, particularly in the southwest. Trade in other lines is active. Country collections range from fair to good. Retail merchants are busy.

WICHITA.—Cold weather retards retail trade, but wholesale is still good. Collections are slow. Building is active.

MILWAUKEE.—Jobbing trade is of fair volume, but retail is quiet, due to weather conditions. Collections are fairly good, though some complaints are heard.

SIOUX CITY.—Trade conditions are fair and collections are fair to good.

DAVENPORT.—Trade, retail and wholesale, is exceedingly quiet, due to continued disagreeable weather. A good demand for money prevails. Collections are a trifle slow.

ST. PAUL.—Trade conditions continue good and sales are in excess of last year in all lines, but the weather has been too cold and lessened the anticipated volume. Collections are coming in nicely and backward accounts are being reduced. Payments are as large as last year, but should have been greater on account of the increased sales and the large amount outstanding from last year's business.

MINNEAPOLIS.—Continued cold weather retards business, although the volume is probably larger than last year at this time. Collections improve slowly. Lumber is active and building materials are in strong demand. Manufacturers of wood and iron are busy, especially the latter lines. Flour is quiet and conditions are not satisfactory. Wheat deliveries from country elevators to terminals are large, but farmers are bringing in very little.

OMAHA.—Unseasonable weather has materially affected retail trade. However, jobbers report trade quite satisfactory and regard the outlook as very promising. Collections are a little quiet.

LINCOLN.—Cold weather retards business. Conditions, however, are improving. Collections are fair.

SIOUX FALLS.—Trade is fair and collections are fair to good.

CHARLESTON.—Wholesale trade is quiet. Retail trade is fair. Collections are slow.

RICHMOND.—Dealers in agricultural implements and farm supplies are doing an active business, and with favorable weather they anticipate a successful spring trade. Tobacco manufacturers here, in Danville and throughout North Carolina are doing an active and increasing business. In some instances the output has shown an increase of 300 per cent. over previous years; especially is this true with independent factories. The majority of the 1906 crop of tobacco has been marketed. Sales throughout the season have been good, and, as the market closes, there is neither abatement in demand or decrease in price. Continued cool weather retards retail trade.

AUGUSTA.—Retail trade is only fair on account of cold and rainy weather. Wholesale trade continues fair. Collections are fair.

ATLANTA.—Trade is dull and not up to volume done for same period last year.

BIRMINGHAM.—Trade is not quite so good, owing to continued cold weather. Collections are slow.

MOBILE.—Receipts of naval-store products have declined, owing to the cold snap of two weeks ago. An advance in prices is expected next week. A large supply of sap lumber is on hand, due to the milling of storm-swept timber of last September. Prices are low. Retail and wholesale trade are quiet. Collections are only fair.

MONTGOMERY.—Business continues only fairly satisfactory, being restricted by unfavorable weather. Building is active and materials and labor are in good demand. Collections are quiet.

CHATTANOOGA.—Trade conditions continue favorable and collections are good.

MEMPHIS.—Spring wholesale business is about over. Jobbers report a fair volume of filling-in orders. Retail business is retarded by cold weather. Collections are slow. The car situation is improving, but the shortage is still acute and is delaying the movement of cotton and lumber.

NASHVILLE.—Owing to unseasonable weather jobbers report a falling off in business. Orders from country merchants are light. Retail trade continues dull. Collections are fair.

LITTLE ROCK.—Wholesale trade compares favorably as to volume, and a change of weather is increasing retail by occasioning demand for clothing. Collections are fair.

NEW ORLEANS.—Retail stores are doing only a fair volume of business, because of the unsettled weather conditions. Jobbers are rather active, but in most lines business is not up to expectations.

FORT WORTH.—Trade is active and collections are fair.

DALLAS.—Cold and unseasonable weather has greatly retarded trade in all lines, especially retail. Collections are quiet.

WACO.—There is considerable activity in all lines and collections have improved.

SAN FRANCISCO.—The settlement of labor troubles in Goldfield has given a great impetus to operations. Business is good.

SEATTLE.—Continued good weather has improved retail trade, and, as the freight congestion has been relieved to a considerable extent, business in all lines shows renewed activity. Collections are good.

SPOKANE.—Business is good, but collections are slow.

PORTLAND, ORE.—Business in all lines shows a greater volume than in previous years. Building operations continue active, with increasing real-estate values. Crop conditions are excellent. Collections are good.

TACOMA.—Wholesale and retail trade are well maintained. There is a strong movement of immigration into this section of Washington.

TORONTO.—All branches of trade here report a continuation of the unusual activity which has prevailed throughout the winter. Demands upon manufacturers and wholesalers are still larger than they can well fill, and there is unabated complaint of slow deliveries. All lines of dry goods are firm, silks, cottons, linens and wools especially so. Travelers out report an excellent business doing in fall lines. Retail stocks are moving well, and there is evidence that the end of the season will find spring goods well cleared out. Building permits here are much larger than for the same time last year, and this is causing a heavy demand for many lines of hardware. Similar conditions are reported from the towns and cities of the province. The demand for metals and for heavy hardware generally is brisk and prices firm. Groceries are more active, owing to the pending opening of navigation. Butter and cheese are firm. Hides and skins are easy. Wool is taking an easier turn, following foreign markets. Foreign fruits are active. Southern vegetables are scarce and firm. Lemons are expected to hold high priced all through the summer. Collections are generally fair to good; those from Ontario points have shown some improvement during the past week.

MONTREAL.—Retail lines show a better movement following warmer weather. It is impossible, however, to speak of wholesale trade conditions without referring to delays in manufacturers' deliveries. This is particularly the case in textiles. Sorting orders for spring have improved, and there has also been some improvement noted in collections. Fall business in dry goods is turning out well. As regards summer lines, the wind-up of last season left shelves fairly heavy with unsold stocks. Spring goods were particularly slow in moving, but it is now seen that stocks will be pretty well cleared out this year. Silk fabrics are very firm, and carpet prices have advanced. Hardware is moving briskly. Orders for paints, oils and the smaller goods are coming in very freely, and heavy lines are active and firm. Pig iron is higher, while boiler plate is easier on account of the removing of duty on English and American goods. The shortage of rolling stock is proving a great handicap to Canadian railroads. The Government Railway Commission has announced that the Canadian Northern is unable to cope with the congestion of freight on some of its western lines, and other roads have been asked to assist with the loan of engines. It is thought, however, these roads have hardly sufficient for their own needs. The boot and shoe industry is actively engaged. Butter holds firm on heavy demand. The firmness is partly caused by shipments to New York. Cheese is quiet, although firm in tone. Is is said 2,000,000 or 3,000,000 bushels of Manitoba oats are booked for shipment during the next three months.

VANCOUVER-VICTORIA.—The situation in the coal mines provides the center of interest in affairs here. For a long time trouble has been brewing in the British Columbia mines and matters have now come to a head. The mine owners have announced a reduction in wages and the miners have ceased work for the time being. If this trouble should continue the result will be disastrous to trade throughout the west. Railways are even now unable to cope with their business, and, failing coal, something like a tie-up of western roads must follow. The Labor Department at Ottawa is making every effort to settle the difficulties between the men and their employers, and it is confidently hoped that some arrangement will be arrived at whereby work in the mines will be continued. Representatives of the government are on their way here. General trade along the coast is active. Wholesale and retail trade is brisk and collections fairly good. The lumber trade continues exceedingly active.

WINNIPEG.—Owing to improvement in weather conditions trade prospects have brightened up. There had been some fear that continued cold weather would interfere with seeding operations and perhaps lower the total acreage to be put to crops, but things have taken on a better appearance, and it is confidently expected the total acreage will this year show a very considerable increase. General trade is moving fairly well, although the congested condition of the railroads is still a big factor. Government officials are investigating, and it is hoped some means of preventing a recurrence of these conditions will be discovered. Collections are still slow.

FINANCIAL.

Money Market.

In spite of the unfavorable bank statement of last Saturday and the expectation that to-day's Clearing House averages will display another increase in loans, on account of continued withdrawals of outside money from the New York market, there has been a further relaxation in interest rates. Sentimentally, the effects of the reductions of discount rates abroad by the Banks of England and Germany have had a reassuring influence. Foreign exchange, it is true, is quite high, and there has even been some discussion in Paris regarding the feasibility of drawing gold from New York to the French capital. Neither this nor the tendency of the rest of the country to place loans based on speculative transactions with the New York City institutions seem, however, to produce any special feeling of alarm. On the contrary, call loan rates eased off materially during the latter portion of the present week, the figure for renewals of such obligations on Thursday being 2 per cent. Time money, it is true, has not changed to any great extent, but the offerings of funds for all periods are, on the whole, larger, and in commercial paper there is a much better buying demand, together with the appearance of a liberal assortment of desirable names.

New York Banks.

As was the case in the preceding week the Clearing House statement of last Saturday showed another heavy increase in loans, amounting to $25,347,800, which was again ascribed to the shifting of borrowings from out-of-town institutions and trust companies to the banks. There was also an increase of $2,477,300 in the cash items, and the deposits were $26,501,600 larger, which was, however, $1,323,500 less than the combined increases in the cash and loans. The reserve requirements were augmented by $6,625,400 and the surplus reserve consequently decreased $4,148,100. The figures of the statement compare as follows with those of the preceding week:

	April 20	*April 13*	*Changes*
Loans	$1,125,004,900	$1,099,657,100	I. $25,347,800
Specie	215,129,400	212,966,300	I. 2,163,100
Legal tenders	73,616,300	73,302,100	I. 314,200

Foreign Exchange.

There was a rather brisk demand for remittances at the beginning of the present week, and on Tuesday the posted rates for sterling were advanced ½ cent for both long and short bills, making the nominal quotations 4.84@4.87. This was accompanied by a further rise in the quotations for actual sight sterling from below 4.86 to 4.86.45. This movement, it was generally understood, was the direct result of the paying off of foreign loans made to Wall street interests during the recent period of high-money rates. The firmness of the market, however, was modified later on by the reduction of the Bank of Germany's rate from 6 per cent. to 5½ per cent., and by that of the Bank of Amsterdam, which was also announced on Tuesday. This gave point to the general anticipation that the Bank of England would be likely on Thursday to mark its rate down from 4½ per cent. to 4 per cent., which expectation was borne out by the action taken on the day in question. As a result the actual rate for demand sterling yielded to 4.86.20, while on the other hand long bills on London were steadier at 4.83.25@4.83.40.

POSTED RATES OF LEADING DRAWERS FOR LONG AND DEMAND STERLING.

Apr. 20	*Apr.* 22	*Apr.* 23	*Apr.* 24	*Apr.* 25	*Apr.* 26
4.83½ @ 4.86½	4.83½ @ 4.86½	4.84 @ 4.87	4.84 @ 4.87	4.84 @ 4.87	4.84 @ 4.87

ACTUAL BUSINESS BANKERS' DEMAND STERLING.

4.85.80 @ 4.86.00	4.85.75 @ 4.86.10	4.86.15 @ 4.86.45	4.86.00 @ 4.86.25	4.86.10 @ 4.86.25	4.86.00 @ 4.86.20

ACTUAL BUSINESS BANKERS' SIXTY-DAY STERLING.

4.82.80 @ 4.83.00	4.82.75 @ 4.83.20	4.83.25 @ 4.83.50	4.83.25 @ 4.83.40	4.83.30 @ 4.83.45	4.83.15 @ 4.83.25

Closing quotations on Friday for actual business in other classes of bills were: Cables, 4.86.50@4.86.60; commercial bills, 4.82⅝@4.83; francs, 5.21¼ plus 1-32@5.17½ less 1-32; reichsmarks, 94⅜@95 plus 1-32.

The Bank of England's minimum discount rate was reduced on Thursday from 4½ per cent. to 4 per cent., and its return for the week showed an increase of £296,000 in specie, the proportion of reserve to liability being 45.32 per cent. against 44.65 per cent. the week before and 39.37 per cent. at this time last year. In the London open market discount is 2⅞@3 per cent. and call money 1½@2 per cent. The Bank of France this week reported a decrease of 5,500,000 francs in gold. Its rate remains at 3½ per cent. Exchange on London is quoted at 25 francs 17½ centimes. In the Paris market money is quoted at 3⅜ per cent. The rate of the German Imperial Bank was reduced this week from 6 to 5½ per cent.; discount in the Berlin market is 3½@4⅛ per cent.

Bank Clearings.

[By Telegraph to BRADSTREET'S.]

BRADSTREET'S Bank Clearings Report for the week ending April 25 shows an aggregate of $2,621,745,000, as against $3,014,063,000 last week and $3,064,134,000 in the corresponding week last year. Canadian clearings for the week aggregate $75,109,000, as against $77,729,000 last week and $70,833,000 in this week a year ago. Following are the detailed returns by cities for this week and last, with percentages of increase or decrease as compared with this week in 1906:

	April 25	*Inc.*	*Dec.*	*April* 18

New York Securities Market.

Except on a few days this week the market has been a narrow one, with, however, a firmer undertone and advances in some leading stocks. The change, though a slight one, was notable because there is nothing to indicate that the public has reversed its attitude toward the market or that buying from that quarter, either for speculation or investment, has materially increased. The best explanation given for the alteration in sentiment was that leading professional interests reached the conclusion at the end of last week that in view of the much easier state of the money market, and the existence of a widely extended short interest, made up in great part of small fry traders, there was opportunity for a manipulative movement on the bull side. This is borne out by the fact that a very large proportion of the dealings from day to day was confined to a comparatively few stocks, such as Reading, Amalgamated Copper, Great Northern, and, above all, Union Pacific. The latter stock, indeed, has been throughout the most prominent feature, and, judging from appearances, it would seem to be reasonable to accept the theory that that and the other Harriman stock were receiving renewed support from inside sources.

The ease of money at home and abroad took rank as a principal bullish argument. Notable events of the week were the lowering of the Bank of England rate, and that of the Bank of Germany as well. The New York banks, it is duly noted, are still taking up the loans which were made to Wall street by interior institutions during the period of high money, while on the other hand, the aid extended by the Treasury to the banks and the money market is, in a measure, becoming exhausted. It is somewhat singular that under these circumstances the loan market should, in fact, have displayed a disposition to become still easier. The influence of the better money-market conditions abroad may be regarded as having had not a little to do with this, however. Adverse crop reports were circulated more or less during the week, but seemed to have little effect on the market beyond rendering it rather dull at times and creating fractional recession in prices, which were regained promptly whenever the leading bull interests chose to put pressure upon the bears. Some effect was also produced by certain of the anti-railroad legislative measures. Brooklyn Rapid Transit, for instance, was a weak feature on the adoption of a bill at Albany compelling it to adopt a 5-cent fare to Coney Island. Similarly, Chicago Great Western sold down sharply on a severely adverse report on its capitalization and finances made by a committee of the Minnesota legislature. Not a little interest was also displayed in the speech which the President delivered at the opening of the Jamestown Exposition.

Boston Stock Market.

Wheat and Flour Exports.

[Special to BRADSTREET'S.]

The quantity of wheat (including flour as wheat) exported from United States and Canadian ports for the week ending with Thursday compares as follows, in bushels:

Week ending	1907	1906	1905
January 3	4,255,270	3,839,741	1,411,947
January 10	4,073,110	4,768,772	700,950
January 17	2,636,460	3,448,862	1,138,974
January 24	3,328,255	3,433,585	1,101,587
January 31	2,102,216	3,056,208	945,358
February 7	3,319,930	3,241,939	987,775
February 14	2,500,139	2,951,642	536,540
February 20	2,932,491	2,357,068	923,022
February 28	2,857,420	2,300,476	907,936

Statistical Situation of Cotton.

The aggregate world's visible supply of American and other cotton last week, as made up by the New Orleans Cotton Exchange, is shown, with comparisons:

Week ending	*April* 19, 1907	*Apr.* 12, 1907	*April* 20, 1906
American	3,603,545	3,749,863	2,855,071
Other kinds	1,430,000	1,476,000	1,561,000
Total	5,033,545	5,225,863	4,416,071

Of the world's visible supply, as above, there were afloat for or held in various countries on the dates given the following quantities:

	April 19, 1907	*Apr.* 12, 1907	*April* 20, 1906
Great Britain and continent	2,948,000	3,048,000	2,101,000
Egypt	181,000	187,000	144,000
India	771,000	744,000	1,048,000
United States	1,134,000	1,247,000	1,123,000
Total	5,034,000	5,226,000	4,416,000

Following will be found the movement of cotton into sight for the week and season, as compiled by the New York Cotton Exchange:

	This week	*Last week*	*Last year*
Week	104,031	109,042	118,634
Season	12,569,510	12,471,499	9,943,804

Boston Wool Market.

The market has again been extremely quiet, as stocks are very light and selections are becoming poorer. Sales being made are to fill in for immediate use by the mills. The only exception to the general dullness has been in quarter blood fleeces, which are in fair supply and have been in fairly good request the past week, though dealers refused many bids as too low. Interest has been in Michigan and Ohio quarters, the former selling at 31@31½ cents and the latter at 32@32½ cents. Small sales of California fall were made at 58 cents scoured, and twelve months at 70 cents. Other sales of the week have been small lots of XX fleeces at 34½ cents, unwashed delaine at 29 cents, fine unwashed at 26 cents, unmerchantable at 28 cents, and fine and fine medium Idaho and Utah at 21@22 cents. New Arizona wools sold at 24@24½ cents for fine medium and 26@26½ cents for medium. Foreign wools have been very quiet in this market, with small sales of fine merino and high crossbreds, but the New Zealand crossbreds are in full supply, and being largely low crossbreds, are a drug on the market. Interest still centers in the west, but little has been done in the way of sales, dealers being very firm in their intention not to pay any more than the wool is worth, with growers just as firm in their asking prices. Shearing is general in Texas, California, Nevada, Utah and Wyoming. In Texas growers ask 20@22 cents, while bids are at 18@19 cents. The new California wools are of good quality, and are selling at about last year's prices. Though about half the Utah clip is under contract, the wool is accumulating. In Nevada sales are being made at 16½@18 cents, a little lower than last year. The London sales will open Tuesday, and a number of Boston buyers will attend, the offerings being 160,000 bales, more than half New Zealand grades, which are expected to open about 10 per cent. lower. Fine merinos and high crossbreds, however, are expected to open very firm.

Boston Shoe and Leather Market.

The leather market is still wearing its between-seasons appearance of quietness. A few large manufacturers have been early in securing their requirements, but the greater number are still holding off. Prices have not receded to any extent. Some special lots have been allowed to go at a price, but goods that are up to quality and in current demand are held so firmly that the quiet season has had no effect upon the price. Sole cutters have bought freely of union sole leather, preparing for fall business. Oak sole is quiet. A sale of 3,000 selected backs at 41 cents is reported. Rough leather is not so often bringing full quotations, and trade is reported slow. There are large contracts under consideration calling for the usual deliveries of grain leathers for manufacturers, but buyers do not appear so willing to pay full prices and are still holding off. Hides are quiet. Buffs are slow sellers at 10½ cents. Packer hides are reported a shade firmer. Shoe manufacturers are receiving a good many mail orders and small supplementary orders from salesmen. A few factories are working to the normal capacity, but most are not averaging better than two-thirds. Fall buying has not yet become general, but is expected to begin in earnest about May 1. Shipments of footwear make a good comparison with same week last year. The *Shoe and Leather Reporter's* figures are as follows: Last week, 91,824 cases; preceding week, 103,840; last year, 80,285; total for 1907, 1,515,628; total for 1906, 1,563,880; decrease, 48,252.

Trade Openings Abroad.

Vice-Consul W. H. Orrett calls attention to the commercial changes taking place in Jamaica since the earthquake, and the consequent American trade opening. He writes from Kingston: "The present is a very opportune time to increase the trade of the United States with this island, as there is a large field at present in Jamaica for the opening of strictly wholesale American houses and commercial agencies, as the earthquake and fire have ruined many of the local traders."

ONE HUNDRED YEARS OF SAVINGS INSTITUTIONS.

In February, 1807, there arose in the British Parliament Samuel Whitbread, wealthy brewer and member of the House of Commons, "advocate of the oppressed and opposer of every species of corruption and ill administration," says an article which we copy from the Boston News Bureau. Mr. Whitbread was speaking in favor of a broad and comprehensive poor laws amendment bill. In a four-hour discussion, among his digressions was one in which he outlined what he believed a workable system of safe investment of the savings of the poor. He told the House of various isolated attempts to take care of their hoardings in such a way as to secure for them a return for their thrift. Out of these erratic undertakings he was certain that a great national system could be devised.

"There in that address in the House of Commons originated the system which has resulted in there being on deposit to-day in institutions for savings in the United States alone more than $3,000,000,000—a sum equal to more than three times the indebtedness of the United States or to one-half the total assessed valuation of New York state.

"Whitbread's proposal was favorably received in some quarters despite the ridicule of conservatives. Savings banks, open to the general public as depositors, began forthwith to be organized through-

out Great Britain. Particularly in thrifty Scotland, where the name of Henry Duncan, a clergyman of Dumfries, is associated with correct working out of various practical details, the institution was early developed into an important feature of national life. Into Ireland the new scheme penetrated quickly, though the Irish institutions for savings, such as the celebrated one at Stillorgan, founded in 1815 by Rev. John Readee, had for many years a peculiar arrangement by which each depositor's account was kept separate. The Irish depositors at the outset were so suspicious that they felt their money had been stolen unless they could at will see in a box bearing in the individual's name either the coins and bills he had deposited or the stocks and bonds which had been bought with these.

"In Great Britain, about the middle of the nineteenth century, special departments for handling ordinary savings as well as annuities and life insurance were taken over by the British post office.

"America was only a little behind the mother country in adopting this beneficent scheme for the encouragement of thrift and industry among its plain people. As early as November, 1816, the Philadelphia Savings Fund Association began doing business, even before it had been incorporated. The first savings bank to be legally empowered to open its doors in the United States was the Provident Institution for Savings, in Boston, which a number of philanthropically inclined gentlemen of the American Athens started very shortly after their articles of incorporation were taken out on December 15, 1816. In one of their earliest advertisements this statement appeared: 'The trustees will take no emolument or pay for their services, having undertaken solely to promote the interest of the city and of the persons above described who may put their money herein.' This disposition on the part of savings-banks trustees has continued down to this time.

"Modest success was achieved by the Provident from the start, and by numerous other banks which were opened shortly after. James Savage, secretary of the Provident Institution and its guiding genius of the early years, once announced that it would be time to wind up the bank's affairs if ever the deposits should reach $10,000,000. No institution, he thought, could possibly handle so much money as that to a profit. Yet in New York City the Bowery Savings Bank, the biggest of all institutions of its kind, has to-day deposits aggregating around $100,000,000, and there are in the metropolis sixteen other savings banks that have exceeded the limit Mr. Savage imposed. So positive were various authorities in the early days that large totals of deposits were dangerous that in many states a limitation was imposed by law, as when the Bowery Savings Bank was incorporated in 1834 with the right to handle $500,000 only.

"At the outset the field of the American savings banks' investment was not limited as it is now and there were consequently some failures during the panic of 1837. But even then the losses to depositors were comparatively small, and in the succeeding period of financial disaster very few institutions of savings failed. It has been stated that in Massachusetts, which relatively to its population has always been the best supporter of the savings banks among American commonwealths, the losses in the first sixty years amounted to less than $75,000—during years in which more than $750,000,000 were handled."

THE SOUTH AND IMMIGRANTS.

In a recent issue the Chattanooga *Tradesman* showed that the production of the corn crop of the country at large was $1,116,000,000, of which the southern states produced nearly one-half, or $500,000,000 in round numbers; and while this shows the south is no longer a "one-crop" section, still it was further shown that if the yield of the south had been brought up per acre to what certain northern states produced, the crop would have been about doubled in value. It was argued from those facts that the south could afford to import one million agricultural immigrants and pay for them $500 each, if necessary, and recoup itself in one year from one crop alone for the outlay.

The *Tradesman* then says: "But our investigation has led us into a still larger field and we have a much stronger comparison to make in this direction. The total agricultural resources of the south last year was about $1,750,000,000, and while this was indeed a very large addition to the productive wealth of this section, it was still so far short of what it should have been that we figure the loss at $1,000,000,000, and present the following figures as our basis for this statement. Here are a few of the other standard crops which every one knows can be produced as readily in the south as elsewhere, and which the figures show are far below what should be a just production for this section.

"Farm values of the following crops produced in the United States, and those of the south, in 1906:

	United States	*South*
Hay	$592,539,671	$63,533,815
Tobacco	68,232,647	38,119,583
Irish potatoes	157,547,392	16,413,920
Oats	306,292,978	33,788,635
Wheat	490,333,760	53,169,059
Barley	74,235,997	Nominal
Total	1,689,182,445	205,025,012

"Giving the south its just proportion of the above crops, we find there is a loss in the result of $500,000,000, and we showed how it was losing a similar sum on the corn crop, and these make a round $1,000,000,000 of our statement.

"Of course we understand what that much larger crop would mean as tending to lower prices, but the argument is for more immigrants to produce this excess, and these would likewise become consumers and thus tend to maintain prices through increased demand. We believe that the increase in land values would be as much as this sum shows in crop values, so that every interest of the south is arrayed on the side of bringing agricultural immigrants into this section, and we further believe this the most important matter that confronts our people."

ENTERED AT THE POST OFFICE AT NEW YORK, N. Y., AS SECOND-CLASS MATTER.

SATURDAY, MAY 4, 1907.

According to cable advices from Berlin, the German Federal Council approved on Tuesday the provisional tariff arrangement between the United States and Germany. The details of that agreement have not yet been officially promulgated, but it has been stated, on the basis of information derived from German sources, that the existing modus vivendi will be extended for a year. Under this arrangement American goods will have the benefit of the minimum duties under the German tariff in return for concessions from the United States, which appear to involve in the main changes in the administrative customs regulations. It is reported that the export price instead of the market value will be taken as the basis of appraisement in the case of foods intended exclusively for export or which are only put on the market in limited quantities, and that statements as to the cost of production will hereafter be demanded from consuls only when the customs authorities especially request such statements. It is now announced that in order to avoid drifting into a régime of tariff retaliation, the French government would be glad to see created a joint tariff commission such as sat in Berlin some months ago and prepared the details of the arrangement referred to above.

A railroad may be compelled by a state commission to so adjust its schedule as to allow of the making connection with other lines in the interest of the public convenience even if the railroad is thereby put to some additional expense. This is the gist of a decision just rendered by the Supreme Court of the United States in affirming the validity of an order made by the North Carolina Railroad Commission against the Atlantic Coast Line Railroad Company. The commission directed the railroad company to run a train from Rockymount to Selma so as to connect with a through train at the latter place at 2.25 p. m., to accommodate passengers destined for Raleigh. The company resisted the order on the ground that it could not be complied with without putting on a special train, which would involve extra expense, while the commission justified its course on the ground that the order was necessary to accommodate a large part of the public. The Supreme Court of North Carolina decided against the company, and the Supreme Court at Washington sustained the decision. Mr. Justice White, who read the opinion of the latter court, said that the case before it did not directly involve any question whatever of the power to fix rates and the constitutional limits controlling the exercise of that power, but was concerned solely with an order directing a carrier to furnish a facility which it was a part of its general duty to furnish for the public convenience. The primal duty of a carrier, he added, is to furnish adequate facilities to the public, and that duty may well be compelled, although by doing so as an incident some pecuniary loss from rendering such service may result.

The advocates of the policy of preferential tariffs have apparently missed their aim in the Imperial Conference which has been in session at London for the last three weeks. Arguments in favor of the policy have been urged with earnestness, but they have failed to impress the members of the British Cabinet. This fact was disclosed in an address made by Mr Asquith, the Chancellor of the Exchequer, on Thursday. He declared that he was opposed to preferences for the reason that they would involve the setting up of a new system of duties which would be an infringement of the root principle of free trade. While, he said, the colonies might hold preferences vital to their interests, the imperial government held free trade to be vital to the interests of the United Kingdom and could not accept anything undermining that policy even experimentally. One of the surprises of the conference was the declaration by General Botha, Premier of the Transvaal, that it would be quite competent for his government to raise tariffs against British goods or those of other countries if that policy commended itself, and that he protested against any attempt to rob the respective governments of their freedom in tariff matters.

Government receipts for the month of April showed an excess over expenditures amounting to $5,188,591, the receipts being $58,260,591 and the expenditures $48,072,000. The receipts for the ten months of the fiscal year ending with April amounted to $545,106,659, an increase of over $53,500,000 as compared with the corresponding months of the preceding fiscal year. The expenditures for the ten months amounted to $488,631,773, an increase of only a little over $1,000,000 as compared with the like period in the last fiscal year. There was, as will be seen, a surplus for the ten months amounting to over $56,400,000, whereas at this time last year the surplus amounted to less than $4,000,000. It may be recalled that former Secretary Shaw estimated a surplus of $58,000,000 at the close of the current fiscal year. As will be seen, the surplus at the end of April was within about $1,500,000 of the Secretary's estimate, and there are still two months of the fiscal year to run. The likelihood is that the surplus will be still further increased and that the Secretary's estimate will be exceeded, possibly by no inconsiderable figure.

Last year several packing companies and firms indicted by a federal grand jury in the Eighth Circuit for accepting rebates, involving, among other things, concessions of 12 cents a hundred pounds from the established rates for the transportation of provisions on through bills of lading from Kansas City to Christiania and other points in foreign countries, were convicted and fined $15,000 each. The action of the trial court was affirmed this week by the Circuit Court of Appeals at St. Paul. The court, in an opinion by Judge Sanborn, held that the giving or receiving of a rebate or concession whereby property in interstate or foreign commerce is transported at a less rate than that legally filed and published is a violation of the Elkins act, and is a continuous crime adjudicable in any court of the United States having jurisdiction of any district through which transportation is conducted. The giving or receiving of the rebate or concession whereby such property is transported at less than the established rate is, the court said, the essence of the offense denounced by the Elkins act, and the particular device by which it is brought about is not an essential element of the crime. Furthermore, the court held, a contract by a carrier and a shipper to transport the latter's goods at the then established rate for a definite time is ineffective after a higher rate has been filed and published as required by law, and such a contract constitutes no defense to a charge of giving or receiving a rebate or concession from the filed and published rate. These are the first of the rebate cases instituted by the government to be brought to the Circuit Court of Appeals. Whether they will be taken to the court of last resort by the companies has apparently not yet been determined.

A new high-water mark in circulation has been reached as the result of another gain in April, following upon one in March. The increase for April amounted to over $25,700,000, which is over $10,000,000 in excess of that for March. The most noteworthy gain was one of nearly $20,200,000 in gold certificates, while minor increases appeared in the items of silver certificates, national bank notes and gold coin. As compared with the corresponding date last year, the figures issued on May 1 showed an increase of over $211,800,000, gains being noted under every head but one. As was the case for the month, much the largest increase for the year was in the item of gold certificates, where there was a gain of over $129,600,000. Next in order was one of over $43,600,000 in national bank notes. There were also increases of over $18,900,000 in gold coin, of over $11,800,000 in subsidiary silver, of over $4,800,000 in United States notes, of over $2,200,000 in silver certificates, and of over $2,100,000 in standard silver dollars. The only decrease was one of over $1,400,000 in Treasury notes of 1890. The total amount of money in circulation on May 1 was $2,932,106,025. On the basis of a population estimated at 85,838,000 on that date, the circulation per capita amounted to $34.16. This represents an increase of 25 cents as compared with the preceding month, of $1.94 as compared with May 1 last year, and of 10 cents over the highest level heretofore reached, namely, that touched on February 1 last.

Copper market circles were excited this week by an unexpected and sharp advance in the London quotations for that metal. The price of what is known as "best selected" rose on last Wednesday to £114 10s. per ton, while standard copper touched £108. In our own copper market the advances were less striking, but the bid price advanced to 25 cents for lake, and the price for spot copper was held firmly at 25¼@25½ cents. In explanation of this movement in the London market, it is stated that the stock of standard copper in the United Kingdom has fallen since April 15 from 5,130 tons to 4,610 tons, while the demand seems to continue large, and at times even urgent. In trade circles there is a very mixed situation, there being a number of rather unusual instances among the recent developments. One of them takes the form of the importation of a considerable amount of Chile bars direct from Chile to New York. It is stated that this resulted from a large concern here having to make deliveries upon contracts and finding itself unable to obtain the copper it required from western producers upon suitable terms.

APRIL FAILURES AND LIABILITIES.

Failures for the calendar month of April reported to BRADSTREET'S number 733, an increase of 7.4 per cent. over April a year ago, but a decrease of 4.1 per cent. from April, 1905. Liabilities of failing concerns in April aggregate $9,887,901, an increase of 25 per cent. over April a year ago and of 5.3 per cent. over April, 1905. At first sight the increase over April a year ago in both failures and liabilities might be regarded as indicating an increased measure of strain in money matters growing out of previous stringency, or as reflecting the effects of unseasonable weather upon retail trade and inferentially upon collections. Examination of the detailed returns by groups of states, however, tends to rob the exhibit of some of its importance. Thus it is found that the increase in the number is largely confined to the middle and the western states, and that the New England states and the south actually report a smaller number of casualties. The increase in number in the far-western group is largely due to the returns a year ago being only partial, owing to the absence of full reports from San Francisco and vicinity. So with liabilities, it is found that New England and the western group show smaller failure damage than in April, 1906, and while the northwest and the south show heavier totals this year, practically the entire excess over last year is furnished by the middle states group, not, however, including the metropolis, which shows a smaller total of liabilities than a year ago. Taken as a whole, therefore, the statistics for the month rather lack conclusiveness, though they may reasonably be regarded as pointing to a rather less favorable situation in several sections of the country than a year ago.

April	*No.* 1907	*Assets* 1907	*Liabilities* 1907	*No.* 1906	*Assets* 1906	*Liabilities* 1906

The April comparisons of failures, assets and liabilities over a period of years are as follows:

	Number	*Assets*	*Liabilities*
1907	733	$5,626,686	$9,387,901
1906	682	4,270,331	7,896,214
1905	765	5,072,948	9,386,430
1904	800	7,723,299	13,929,746
1903	708	5,579,892	10,229,957
1902	791	3,056,041	7,102,847
1901	909	3,671,741	8,348,446
1900	707	2,693,079	7,074,567
1899	886	3,336,167	7,422,176
1898	1,053	6,411,107	14,521,937
1897	980	10,840,746	17,847,990
1896	1,050	8,271,945	14,925,714
1895	1,086	7,473,377	13,665,759
1894	953	6,987,540	12,288,894
1893	903	21,169,177	37,209,473

Canadian failures for April numbered 104, an increase of 28 per cent. over April a year ago, while liabilities aggregated only $489,912, a decrease of 47 per cent. from April, 1906.

REGULATING PUBLIC UTILITIES IN NEW YORK.

The New York legislature and the governor are now wrestling with the measure popularly spoken of as the public utilities bill, but whose short title is given in the proposed act itself as the public service commission law. This bill has been the subject of a considerable amount of criticism and suggestion since its introduction. It has been amended in some important respects, and it is not unlikely that it will be still further amended before it is passed. This measure divides the state into two public service districts, the first including the counties of New York, Kings, Queens and Richmond, and the second comprising the other counties of the state. For each of these districts a commission consisting of five members is provided, having jurisdiction over railroads and street railroads lying within their respective districts, and over the transportation of persons and property and the manufacture, sale or distribution of gas and electricity for light, heat and power therein. In addition, the commission for the first district is given jurisdiction over street railroads any portion of whose lines lies within it, and to the transportation of persons or property from a point within either district to a point within the other, though the commission for the second district has jurisdiction of the portion of the lines of such street railroads lying within such district. In addition, the commission for the first district has the powers heretofore conferred upon the board of rapid transit railroad commissioners.

It was at first proposed that the governor might remove any commissioner upon filing a statement of the reasons therefor, and that he should report such removal and the reasons therefor to the legislature. The provision has been amended so as to provide that commissioners may only be removed for inefficiency, neglect of duty or misconduct in office, upon charges and after a hearing. The salaries of commissioners were at first fixed at $10,000; now they are increased to $15,000. The bill was at first made to apply to pipe lines, but the provision to this effect has been stricken out, while the commissions are given jurisdiction over conduits and ducts which they did not have in the original bill. Provisions requiring adequate service, just and reasonable charges and the publication of schedules of rates and joint rates, and prohibiting unjust discrimination, unreasonable preferences, false billing, etc., have been redrawn so as to follow as closely as possible the terms of the interstate commerce act. The provision in reference to passes, which allows the grant of passes to state officials, caretakers of live stock, officers, attorneys and employees of railroads, employees of the United States mail, customs and immigration service, military forces in the actual discharge of their duties, ministers and persons engaged in and who are the object of various kinds of charitable work, is amended by allowing railroads to exchange passes, and by permitting passenger transportation to be issued in exchange for advertising space in newspapers at full rates.

Certain provisions requiring common carriers to furnish sufficient and suitable cars for transportation have been amended so as to limit the requirement to railroad corporations. A provision making carriers liable for delay in transit due to negligence is amended by striking out an allowance for special damage in cases where the carrier is notified of the reasons for requiring prompt delivery. No railroad corporation, street-railway company or common carrier is to be allowed to begin the construction of a railroad or any extension thereof, or to operate any franchise or right under any provision of the railroad law not heretofore lawfully exercised, without having first obtained the permission and approval of the proper commission. A closely similar provision is made in regard to gas companies and electrical corporations, though as respects these the approval of the commission is requisite to the exercise of rights or privileges under any franchise heretofore granted but not actually exercised. It is made the duty of the commission before granting authority to inquire as to the necessity of the service to be furnished by any such corporation and as to the intentions and good faith of the corporation and its officers. Municipalities are not to operate for other than municipal purposes any works for the manufacture and supplying of gas or electricity for lighting purposes without a certificate of authority granted by the commission.

Under the bill no railroad corporation is to be allowed hereafter to purchase or hold any part of the capital stock of any railroad or street railroad corporation organized under existing laws unless authorized to do so by the commission, and save where stock shall be transferred or held for the purpose of collateral security only with the consent of the commission empowered to give such consent, no other stock corporation of any description is to have more than 10 per cent. of the total stock of any railroad or street railroad. No stocks, bonds, notes or other evidences of indebtedness payable at periods of more than twelve months after the date thereof are to be issued by any railroad or street railroad corporation organized, or existing or hereafter incorporated under or by virtue of the laws of the state of New York except when necessary for the acquisition, construction, completion, extension or improvement of its property or facilities, or for the improvement or maintenance of its service, or for the discharge or refunding of its lawful obligations, until an order authorizing such issue is secured from the proper commission. A provision similar to this is made in reference to gas and electrical companies.

Touching rates, it is provided that whenever either commission shall find, after a hearing upon a complaint made as provided in the act, that the rates, fares or charges demanded or collected by any carrier or railroad corporation subject to its jurisdiction for the transportation of persons, freight or property within the state, or the regulations or practices of such carrier or corporation affecting such rates, are unjust, unreasonable, unjustly discriminatory or unduly preferential, the commission shall determine the just and reasonable rates, fares and charges to be thereafter observed, and shall fix the same by order to be served upon the carrier or corporation. Every order of a commission must take effect at a time therein specified and continue in force for a period therein designated unless earlier modified or abrogated by the commission, or found to be unauthorized by law or in violation of the Constitution of the United States. The commissions are given very complete powers to conduct investigations, to prescribe the form of annual reports, to order the making of necessary repairs and alterations, to examine the books and records of all corporations subject to their jurisdiction, and to recommend the enactment of such legislation with respect to any matter within their jurisdiction as they deem wise or necessary in the public interest.

It is, of course, apparent that the powers conferred upon the public service commissions would render some existing bodies superfluous, and accordingly the bill in terms abolishes the board of railroad commissioners, the commission of gas and electricity, the board of rapid transit commissioners, and the offices of inspector and deputy inspectors of gas meters.

The powers of the commissions over witnesses subpœnaed to attend before them are broad. Witnesses refusing to attend or to be examined, or to answer questions or produce documents, are declared guilty of a misdemeanor, for which they may be prosecuted, or the commission may obtain an order of the Supreme Court to compel a witness to answer a material question, and a refusal to obey such an order may be punished as a contempt. No witness will be excused from testifying upon the ground that his evidence may tend to incriminate him or subject him to a penalty or forfeiture, but no witness so testifying is to be prosecuted or punished for any act concerning which he shall have testified.

The bill is still being widely discussed by the various corporate interests affected, by boards of trade and by civic organizations, as well as by individual citizens. So far as it has found expression, opinion seems to be divided upon the measure, which by many is looked upon as imposing too large a degree of government control. It is likely that it will have to be still further modified before it can pass the legislature.

DECREASE IN APRIL BANK CLEARINGS.

Stagnation in stock speculation at the metropolis is largely chargeable for the heavy decrease in the aggregate of April clearings from that of March and for the smaller decreases shown as compared with April one and two years ago. Outside of New York the clearings are still heavily in excess of all preceding years, but a small decrease is shown from March this year. Part of the gain over last year outside of New York is, of course, due to the absence of complete clearings totals at San Francisco in April last year, but even allowing for this a sum equal to the aggregate at that city in April this year, there is still a very heavy gain shown in the April and four months' totals over a year ago outside of New York.

The total clearings at ninety-seven cities for April aggregated $12,536,662,604, a decrease of 13.7 per cent. from March, and of 2.1 per cent. from April a year ago. New York City contributed $7,667,528,614 of this sum, a decrease of 19.5 per cent. from March, and 10.2 per cent. from April a year ago. Some light on this latter decrease can be had by examining the

BANK CLEARINGS AT 114 CITIES FOR APRIL AND FOUR MONTHS, 1907 AND 1906.

* Contains other items than clearings, hence excluded from totals. † Figures so far as available. ‡ Corrected as far as possible. § Not included in totals because of incomplete comparisons.

figures of stock and bond transactions in April this year and last. It is found, for instance, that sales of stocks in April were 40 per cent. smaller than in March, and bond sales were 20 per cent. smaller, while as compared with April, 1906, stock sales show a decrease of 20 per cent. and bonds a loss of 31 per cent.

Outside of New York the clearings, as above intimated, make a much better showing. The aggregate at ninety-six cities for April was $4,869,133,990, a decrease of 2 per cent. from March, but a gain of 14 per cent. over April last year. Following are the aggregates of clearings monthly at all cities, compared with the same periods in five preceding years:

[Six figures omitted.]

	1907	1906	1905	1904	1903	1902
Jan	$14,911	$16,245	$11,785	$9,364	$11,032	$10,576

Dec	....	9,228	9,689	6,166	....	4,954	4,671	3,668

Following will be found the gains or losses, by groups, shown in April and the four months, as compared with the same periods a year ago:

	April		Four months	
New England	Increase	7.0	Increase	6.7
Middle	Decrease	8.5	Decrease	5.5
Western	Increase	12.2	Increase	9.6
Northwestern	Increase	18.7	Increase	12.4
Southwestern	Increase	18.2	Increase	13.9
Southern	Increase	4.5	Increase	4.5
Far-western	Increase	*44.8	Increase	19.6
Total, United States	Decrease	2.1	Decrease	1.3
New York City	Decrease	10.2	Decrease	6.2
Outside New York	Increase	14.0	Increase	8.7
Canadian	Increase	17.5	Increase	10.0

* San Francisco's figures only partial last year.

The total clearings at ninety-seven cities for four months aggregate $53,674,930,926, a decrease of 1.3 per cent. from the same period of 1906. New York City contributed $34,198,987,076 of this, a decrease of 6.2 per cent. from last year, while the aggregate for ninety-six cities outside of this city was $19,475,943,850, a gain of 8.7 per cent. over 1906.

Canadian clearings for April aggregate $328,183,035, a gain of 17.5 per cent. over April, 1906, while the total for four months was $1,306,716,522, a gain of 10 per cent over last year.

A CRITICAL PERIOD FOR THE DUMA.

The Russian Duma has been sailing in troubled waters lately. In part this has been due to conditions existing without that body, and in part to incidents occurring within it. A couple of weeks ago the well-known Russian publicist, M. de Martens, voiced in a long letter to a London journal the belief that the present parliament was unfit to work successfully for the benefit of the Russian nation and could not advance the country in the direction of a constitutional system of government. He based his belief in part upon the ground that a legislative assembly which took no action in disapproval of assassination and enjoyed only expressions of discontent could not discuss needful reforms or construct new order in the state. The sole apparent object of the majority, he declared, was to overthrow the government by any means in its power. There were, he said, no leaders either of the majority or the minority in the Duma. He expressed the conviction that its dissolution was inevitable and was only a question of time.

It seems likely that in expressing these views M. de Martens reflected the sentiments of a certain element of public opinion in Russia. It is known that for some time the Czar has been in receipt of appeals, doubtless from reactionary sources, for a dissolution of the Duma. For the time at least the Czar postponed the taking of any such drastic action as was suggested by these advisers. Indeed, at an interview with M. Golovin, the president of the Duma, some ten days ago, the Czar apparently dispelled any fears that the former may have entertained about the likelihood of a dissolution, though the Czar frankly questioned the impartiality of M. Golovin and referred to certain speeches which he said should not have been permitted by the presiding officer.

Within the Duma itself a strong feeling of antagonism to the government was produced by the revelations regarding the treatment of prisoners at Riga, and this feeling found expression in speeches to which exception was taken by the ministers in view of the fact that they had declared that the government would not overlook crimes committed by officials. An incident especially irritating to the government was the introduction of a bill establishing for Poland a separate Diet and a semi-independent administrative system, with an independent treasury and a separate budget. This bill was opposed, it is true, by the Constitutional Democrats, who declared that its adoption would involve the dissolution of the Duma, but none the less it is counted among the influences which may affect the ultimate action of the government.

Nothing that has happened since the meeting of the Duma, however, came so near to precipitating a crisis as the attack made upon the army and the government by the Socialist member M. Zuraboff in a speech delivered on Monday, in the course of a debate on the bill fixing the number of recruits to be called to the colors. Zuraboff declared that under an autocratic form of government the army was worthless except against the people, and was beaten whenever it engaged in a foreign war. After this speech the ministers withdrew, serving notice on M. Golovin that unless the offensive expressions were retracted by M. Zuraboff and the rule providing for temporary suspension applied against him, they would sever all relations with the Duma. President Golovin was only able to meet this demand in part owing to the support by the Socialists of their colleague, but he rebuked Zuraboff and declared him suspended.

The incident led to serious friction in the Cabinet. Strong pressure seems to have been exerted to have the Duma dissolved, and it is said that a ukase for that purpose was presented for the Czar's signature. Premier Stolypin, however, succeeded in preventing this course being taken, at least for the time, though dissolution was urged by many influential

persons outside the Cabinet Council. Meanwhile President Golovin made a full apology on behalf of the House, declaring that he considered it to be his duty to announce that the House regarded the army, which was true to the fatherland and whose supreme head was the Czar, as deserving of all respect and gratitude. The Duma then passed the recruiting bill by a narrow majority, though it adopted a resolution setting forth the necessity of reducing next year the number of men to be called to the colors. With this episode the immediate danger of dissolution passed, but the course of recent events has been such as to indicate that it is only by conservative action on the part of the Duma and its leaders that the second Russian parliament will be able to escape the fate of the first one.

UNITED STATES STEEL'S MARCH QUARTER.

No particular disappointment was experienced in stock-market circles on account of the failure of the United States Steel Corporation's directors to increase the quarterly dividend upon the common stock of that organization when they met for the purpose of acting upon the common and preferred dividends on last Tuesday. In view of the enormous earnings of the concern during 1906, and the fact that the surplus account, in spite of exceedingly liberal appropriations for depreciation and for the extension of old and the building of new plants, is now in excess of $100,000,000, it has been argued that the common stockholders of the corporation were legitimately entitled to more liberal treatment in regard to the distribution of profits. The hope, however, that instead of another ½ per cent. quarterly payment upon the common stock, the rate might be raised to 1 per cent., thus putting the stock upon a 4 per cent. annual basis, was not general, it being felt that such action would be deemed to show a lack of conservatism. After the meeting it was indeed stated that the failure of the directors to make any change in the common dividend was due mainly to the further large appropriation for additional construction, amounting to $14,500,000 for the quarter ending March 31, this amount comparing with $10,500,000 charged to the same account in the corresponding three months a year ago, and only $3,300,000 in the March quarter of 1905.

At the same time the quarterly statement of earnings and the figures in relation to the amount of unfilled orders on hand on March 31 created an exceedingly good impression. The statement for the three months, as compared with the results for the similar periods in the two preceding years, is as follows:

March quarter.	1907	1906	1905
Net earnings	$30,122,492	$36,634,490	$23,025,896
Sinking fund subsidiary cos. and depreciation	4,154,521	4,325,608	3,910,607
Reserve fund, special replacement fund, etc.	1,000,000	3,000,000	....
Balance	33,967,971	29,308,882	19,115,289
Int. on U. S. Steel bonds	5,685,615	5,741,671	5,796,783
Balance	28,282,356	23,567,211	13,318,506
Sinking fund U. S. Steel bonds	1,251,348	1,195,292	1,140,180
Balance	27,031,008	22,371,919	12,178,326
Preferred dividend	6,304,919	6,304,919	6,304,919
Balance	20,726,089	16,067,000	5,873,407
Common dividend	2,541,513	....	....
Surplus	18,184,576	16,067,000	5,873,407
Appro'ns for additional construction, etc	14,500,000	10,500,000	3,300,000
Surplus for quarter.	3,684,576	5,567,000	2,573,407

In respect to earnings the above is the best showing which the United States Steel Corporation has made in the March quarter since its organization. The $39,122,492 for the period just ended represents an expansion of three times the earnings for the corresponding quarter in 1904, when the total was only $13,445,235, and it is also to be considered that these results were attained in the present instance notwithstanding the fact that during a portion of the time severe floods in the Ohio valley and elsewhere interfered with the workings of various plants, and would furnish adequate reason for a diminution rather than an increase in the earnings of the corporation. It is also pointed out that the total net earnings would doubtless have run above $40,000,000 for the quarter were it not for the fact that the conservatism of the management has led it to make an important change in its accounting methods, whereby renewals of certain kinds of plants, such as blast furnaces, which occur at irregular intervals, are now included in operating expenses and are not charged to extraordinary expenditures.

One of the most satisfactory features of the showing is the statement in regard to the amount of unfilled orders on hand on March 31, which compares with preceding periods as follows, in tons:

March 31, 1907	8,043,858	September 30, 1904	3,027,436
December 31, 1906	8,489,718	June 30, 1904	3,192,277
September 30, 1906	7,936,884	March 31, 1904	4,136,961
June 30, 1906	6,809,589	December 31, 1903	3,215,123
March 31, 1906	8,018,712	September 30, 1903	3,278,742
December 31, 1905	7,605,086	June 30, 1903	4,666,578
September 30, 1905	3,865,377	March 31, 1903	5,410,719
June 30, 1905	4,829,655	December 31, 1902	5,347,523
March 31, 1905	5,579,560	September 30, 1902	4,843,007
December 31, 1904	4,696,203	June 30, 1902	4,791,993

It will be seen that the orders on March 31 aggregated 8,043,858 tons, which compares with 8,018,712 tons on March 31, 1906, and which, although there was a falling off from the high-water mark of 8,489,718 tons on December 31, 1906, would seem to indicate that the demand for iron and steel in their different forms is holding up remarkably well, considering the season and the contraction naturally to be looked for during that period.

EDITORIAL NOTES.

Mr. M. E. Ingalls, chairman of the Big Four System, has made an interesting contribution to the growing mass of comment upon the railroad agitation, in the form of an address which he made before the Traffic Club of Pittsburgh, an organization composed of both railroad officials and all classes of shippers of freight. In reviewing the conditions, legislative and otherwise, which have led up to the present situation, Mr. Ingalls advanced the opinion that railroad interests might as well make up their minds that the railways are no longer a private industry, and that the managers of such organizations must submit to the law and comply with its requirements. The prevalence of secret rebates which were so commonly employed and the underhand agreements between the companies, in the absence of power to make public compacts, were touched upon in the address as the result of the interstate commerce act and the Sherman law. Furthermore, the speaker said that owing to the taxation of railway securities in different states, such obligations found their way into Wall street and passed into the control of financial cliques, the outcome being the institution of the community-of-interests idea and the efforts by a comparatively few individuals to secure control of a very large part of the important railroad lines of the country. Instead of improving their lines, railroad managements in many cases devoted a large part of their income and credit to buying other companies, or to increasing their dividends so that prices for their stock could be advanced with a view to making them sell with greater facility. These tendencies finally culminated in the celebrated Northern Securities case and formed the basis for the agitation which is now so rife in the national and state legislatures. It was also strongly insisted in the address that there should be legislation giving authority to the railroads to make agreements between themselves of a public character subject to the approval of the Interstate Commerce Commission, while the idea was also advanced that legislation should be provided whereby new lines should not be built or stocks and bonds be issued without the authority of the Interstate Commission.

For some time past the stockholders of the different express companies have shown a tendency to insist upon a more liberal distribution of the profits of such concerns. An instance of this was afforded by the recent contest between some of the outside stockholders of the Wells Fargo Company and its management. The general impression on all sides is that the express organizations have all profited enormously from the activity of business and the increase in their traffic arising therefrom. A somewhat disagreeable surprise was therefore occasioned by the letter, which has been made public this week, addressed by T. C. Platt, the president of the United States Express Company, to certain stockholders who were agitating for an increase in the present 4 per cent. dividends paid by that organization, the claim being advanced that the cash assets of the company were at least twenty-five times the original capital. In the answering letter it is stated by the management that the real estate and assets of the company do not amount to more than its nominal $10,000,000 of share capital, that it has no surplus over this available for distribution, and that the character of the business, involving contracts with railways which require it to pay the latter a certain guaranteed percentage of gross express earnings, renders it necessary to accumulate a fund sufficient to protect the stockholders against personal liability. In addition to this increased payment to railways, higher labor and advances in cost of supplies have kept net earnings down to about 5 per cent. of the gross receipts. It is furthermore stated that in 1906, while the increase in earnings over those of the preceding year was $1,552,000, it paid $860,000 more for labor and $1,161,000 more to the railroads over which it operates.

After several alleged denials that a new issue of Atchison bonds was under consideration, the management of that railway system on Wednesday surprised Wall street by announcing that it would offer its stockholders the privilege of subscribing at par for $26,000,000 of 5 per cent. ten-year convertible bonds. Under the terms of the offer payment on subscriptions for these new securities is to be made in installments, the last of which falls due in June, 1908. While no statement is forthcoming as to the purpose for which this amount of additional capital is required, it is generally understood that the extension and improvement work which the Atchison had under way or fully planned, together with the constant requirements for new equipment by that system, rendered it probable that some method of raising a considerable sum would be devised. The chief interest in the matter, however, resides in the fact that the Atchison Company has found it necessary to pay as high a rate as 5 per cent. upon the present issue, although, as might be expected, the effect of the announcement has been to depress the market value not only of its common stock, but also of the 4 per cent. convertible bonds, which had been issued in the last two years and which were selling at a little above par. Money market conditions, however, made it impracticable for the company to put out a security which would prove attractive unless a relatively higher rate of interest were offered thereon, and it is apparently assumed that the issue will be taken by the stockholders, as there does not seem to have been any provision made for an underwriting syndicate.

Severe as was the castigation which speculative interests received from the recent liquidation and enormous declines in prices for stocks, it would seem that Wall street has not lost its appetite for mysteries which seem calculated to cause advances in quotations for prominent securities. During the past fortnight this has received illustration from the very marked advance in Union Pacific shares. That stock, in fact, has been once more the pivot upon which the entire market revolved, while its rise has had a great deal to do with creating the advancing tendency which developed in other portions of the share list, thus negativing the impression, so generally prevailing after the recovery from the break in the market during March, that there would be a period not only of dullness and speculative inactivity on the part of the public, but a further gradual decline in prices toward a lower level. In this instance the course of Union Pacific has apparently been the result of the same kind of out-and-out manipulation by powerful operators to which it has been so many times subjected in recent years. As a basis for these proceedings, it has, however, been given out that the management of the company contemplate important steps calculated to place the company in a better position than it now occupies as regards its holdings of securities of other companies, and at the same time give its stockholders whatever advantages can be derived from the ownership of large blocks of stocks of companies which are in no sense parts of its own system. Much criticism has been passed upon the managers of the Union Pacific for converting it into a financial organization or investment concern instead of adhering strictly to its original purpose as a railroad organization. The story which now finds circulation in the street is that its holdings of Southern Pacific, Atchison, Baltimore & Ohio and other railways are to be transferred to a holding company.

RECENT LEGAL DECISIONS.

[*Prepared for* BRADSTREET'S.]

Railroad Company's Liability—Fencing.

The Supreme Court of Minnesota held, in the case of Coe vs. Northern Pacific Railway Company, that the liability of a railway company for failure to maintain its right-of-way fence in good repair is measured by the rules of ordinary care and prudence, and that while the obligation to construct the fence as required by statute is absolute, yet when it is once constructed in compliance with law the company is only bound to the exercise of reasonable care in maintaining it.

Railroad—Fires—Trainmen's Duty.

The Supreme Court of Indiana held, in the recent case of The Pittsburgh, Cincinnati, Chicago & St. Louis Railway Company, that it is not necessarily negligence for the crew of a local freight train to fail to stop and put out a fire burning on premises adjoining the railroad right of way, where fire has been thrown by a locomotive in the proper conduct of the railroad business without negligence of the railroad company or its employees. The court said that the primary duty of a railroad is to the state, and that the first duty of its trainmen is to operate its cars on schedule time without stopping to put out fires.

Telephone—Removal—Damages.

In the case of Evans vs. Eastern Kentucky Telephone & Telegraph Company, decided by the Kentucky Court of Appeals, it appeared that a patron of a telegraph company notified the company to remove the box and wires from his house, and that the company removed the box, but left the wires so exposed that they were struck by lightning, damaging the house. In an action by the owner of the house for damages, the court held that it was a question for the jury whether the company had used such care as might be reasonably expected of a person of ordinary prudence in failing to remove the wires, and whether the plaintiff by his want of care contributed to the loss by suffering the wires to remain in the house, when by ordinary care he should have known of the danger.

Jurisdiction—Railroad—"Doing Business."

The Supreme Court of the United States held, in the case of Green vs. Chicago, Burlington & Quincy Railroad Company, which arose out of a suit to recover damages for personal injuries received in an accident on the Burlington road in Colorado, that service on the freight and passenger agent of the latter at Philadelphia was not a sufficient service for the maintenance of the suit. It appeared that the agent issued bills of lading and sold tickets for the road which, however, were not good east of Chicago, where the road began. The court held that the business transacted at Philadelphia was nothing more than solicitation and not the business for which the company was chartered, namely, the actual transportation of freight and passengers, and that therefore the road was not doing business within the federal district in which Philadelphia is located.

Inheritance Tax—Repeal—Liability.

In the case of Eidman vs. Tilghman et al., which came before the Supreme Court of the United States at the end of October last year, that court was evenly divided upon the question whether the executors under a will were properly assessed under the inheritance-tax provision of the war revenue law of 1898, that provision having been repealed less than a year after the death of their testator. The even division of the court left standing the decision of the Circuit Court of Appeals for the Second Circuit, which was to the effect that under the circumstances the repeal of the provision relieved the executors of responsibility. What amounted to a rehearing of the question resulted in the same way recently in the cases of McCoach, Collector, vs. Philadelphia Trust, Safe Deposit & Insurance Company, Executors, and others. The tie would have been broken if Justice Moody had sat in the cases, but this he could not do, owing to the fact that he had taken part in them as Attorney-General.

Landlord and Tenant—Rent—Ejection.

The Kentucky Court of Appeals held, in the case of Rich vs. Rose, that the acceptance of an enforced collection of rent in arrears at the time notice to vacate the premises is given will not deprive the landlord of the right to eject the tenant, and that without waiving his right he may also, after forcible detainer proceedings have been instituted, collect or accept the rent that accrued between the date of the notice to vacate and the issuance of the writ if under the statute or under contract a certain number of days must elapse after giving notice before forcible detainer proceedings can be instituted. The court said, however, that if a landlord accepts or undertakes to collect rent not due when notice to vacate is given, and that does not accrue between the date of the notice and the issuance of the writ, or rent that becomes due after forcible detainer proceedings have been instituted, he will waive his right to forfeit his lease under the notice, as the acceptance of the rent or the attempt to collect it is a recognition of the right of the tenant to occupy the premises, and a waiver of the forfeiture.

Extraordinary Dividends—Estate.

The New York Court of Appeals held, in the recent case of Robertson et al. vs. De Brulatour et al., that the question whether an extraordinary dividend or distribution made by a corporation whose stock formed part of a trust estate should go to the life beneficiary entitled under the will to the "income and profits" of the estate or to the remainder-man depended upon the way in which the moneys distributed were made up, and that if the latter were the accumulated surplus of income and profits and did not intrench upon the capital of the company, they belong to the life beneficiary. In ascertaining this fact, the court said, a court is not bound by terms which the company used in declaring the dividend, nor by its methods of bookkeeping, but if an examination of the facts substantiate a finding that the dividend was from a surplus of corporate earnings and income unaffected by proceeds of sales of real estate forming a part of the company's capital, the life beneficiary will be entitled thereto. The court further held that no claim to funds of a company can accrue to a stockholder until the dividend is actually declared.

Railroad—City—Franchise—Extension.

The Supreme Court of Louisiana held, in the case of The Shreveport Traction Company vs. Kansas City, Shreveport & Gulf Railway Company, that city authorities have no power to create corporations or to grant franchises, but that this can only be done by the state, though the city can concede the right of way through its streets. Such a right, the court said, is not a franchise in law, but the privileges conceded are "secondary franchises," instrumentalities by means of which the corporate powers granted by the charter may be exercised. The court said that in determining what the character of the corporation is, reference must be had to its charter, and not to the relations which may have been established between itself and the city by permit or license or contract. If by its charter it is a railroad corporation, its rights as such are not waived or forfeited or abandoned by entering into relations with the city for operating lines of street cars inside the city limits. Between the city and the company, the court added, the relations entered into may control the situation as to the operation of its cars, but when the company extends its line beyond the city under its right to do so reserved in the charter, the city has no control over it as regards its extension.

Taxation—License—Compounding Spirits.

The Kentucky Court of Appeals held, in the recent case of Brown-Forman Company vs. Commonwealth, that the Kentucky act of 1906, entitled "an act relating to revenue and taxation, providing for license taxes on compounded, rectified, adulterated or blended distilled spirits, known and designated as single stamp spirits, and providing penalties for violation of its provisions," was not in violation of section 51 of the constitution, which requires that an act shall relate to only one subject which shall be expressed in the title; that the act did not impose a tax on the spirits but was a license tax upon the business, which was to be determined by the amount of spirits produced; that a man might not legally engage in the business of compounding, rectifying, adulterating or blending distilled spirits, known as single stamp spirits, without giving the notice and having the certificate from the auditor, and that the payment of the tax at the terms required was the condition upon which authority to continue in the business was made to depend; the whole aim of the act being to tax the business of rectifying such spirits. The court added that while the legislature of the state could not regulate interstate commerce, it might regulate the occupation of rectifying in the state, and provide against rectified whiskey made elsewhere being brought into the state branded as Kentucky whiskey and sold as such in the state.

BUSINESS NOTES.

Newspaper and Magazine Art.

Henry Turner Bailey contributes to the *Printing Art* for May an interesting article called "An Analysis of Modern Printing." Of the prodigious labors of the printers of to-day he says: "Do you realize the amount of work all these men and machines turn out? Last year they produced a newspaper, daily, for each family of four persons in the United States, a weekly periodical for each couple, and a monthly magazine for each individual. They produced a total of 75,080,000,000 copies—230,000,000 a day; almost 10,000,000 an hour, or 160,000 a minute, or 2,600 a second, every second of the time called 1906. They produced besides 15,000 new books, averaging 150 pages each, in editions averaging 2,000 copies; a total of 4,500,000,000 pages of reading matter—enough to give four books of 150 pages each to every man, woman and child in the United States. But besides all this, they turned out job printing by the cubic mile. It would exhaust the cipher box to tell how many separate sheets were printed. Suffice it to say that the estimated value of the total output of the printers of the country last year is $500,000,000. There are but five other industries which yield a larger annual product."

New York Stock Exchange Transactions.

Transactions in stocks on the New York Stock Exchange for the month of April aggregated 19,220,048 shares, a decrease of 13,030,794 shares as compared with the previous month, and of 5,076,563 shares as compared with the corresponding month last year. There were only six days last month on which the transactions reached 1,000,000 shares, the largest total being that of April 5, when the dealings aggregated 1,347,006 shares. The total of the 18th was the smallest of the month, the sales on that day amounting to only 310,209 shares, the lightest trading on any day since October 30, 1906. Details of stock and bond dealings for the elapsed four months of 1907 follow:

	Stocks	*Bonds*
January	23,014,797	$53,266,000
February	16,483,152	31,941,500
March	32,250,842	53,958,500
April	19,220,048	43,254,400
Total	90,968,839	182,420,400

Transactions in stocks for a period follow:

	April	*Four mos.*
1907	19,220,048	90,968,839
1906	24,296,611	103,862,017
1905	29,371,530	104,565,331
1904	8,163,544	40,389,741
1903	12,242,578	54,207,430
1902	26,578,512	66,248,494
1901	41,688,897	120,779,566
1900	14,648,113	49,166,770

The following table gives the total transactions in all classes of bonds for the month of April and the first four months of this year, as compared with the like periods in previous years:

	Par value, April	*Four mos.*
1907	$43,254,400	$182,420,400
1906	63,391,700	281,706,700
1905	75,111,800	430,827,050
1904	57,131,600	219,822,300
1903	47,823,800	232,162,500
1902	114,879,900	360,060,100
1901	115,875,500	446,779,270
1900	59,641,830	221,059,470

Our Consumption of Sugar.

The tonnage of sugar brought into the United States exceeds greatly that of any other commodity imported into this country. The year to end June 30 will have recorded a record volume of this article consumed here; in nine months ending March 31, 1907, there was imported 3,692,000,000 pounds, against 3,606,000,000 pounds in the corresponding period of 1903, hitherto the banner year. Domestic production of sugar in 1906 was about 1,304,000,000 pounds, 14,000,000 pounds more than in 1905. This production equals about 20 per cent. of home consumption, and a like amount is supplied by our island possessions; therefore the United States is dependent upon foreign countries for about 60 per cent. Our consumption is estimated at over 6,000,000,000 pounds per annum, or about seventy-six pounds per capita. The average sugar consumption in 1822 was about nine pounds per capita per annum. Prior to 1860 a large proportion of the comparatively small quantity of sugar consumed in the United States was of domestic production; in 1830 it was 50 per cent.; in 1855 it was 57 per cent.; in 1860 it dropped to 28 per cent., and at the close of the war, 1865, it lowered to 2 per cent. While considerably more than one-half of the world's sugar is now produced from beets, cane sugar forms a much larger proportion of consumption in the United States than in most other countries. In 1840, of the world's total sugar crop, beet formed but 4.35 per cent. In 1900 this percentage had risen to 67.71 per cent., the highest known, and last year it was 59.46 per cent. The following table shows the sources of supply of the sugar consumption of continental United States for the fiscal year 1906, in pounds:

Cuba	2,781,901,380
Domestic crop, 1905	1,304,607,360
Dutch East Indies	781,891,724
Hawaii	746,602,637
Porto Rico	410,544,618
Germany	51,246,131
West Indies other than Cuba	151,477,457
South America	129,959,242
Philippines	69,372,887
Mexico	3,540,984
Other countries	9,944,625
Total	6,441,089,045
Less exports and sugar shipped non-contiguous customs districts	37,105,110
Available for consumption	6,403,983,935

Porto Rican and Hawaiian sugar is entered free, Philippines at 25 per cent. under regular duty rates, and Cuban under recipocity treaty at 20 per cent. below regular rates of duty.

Supply and Consumption of Lumber.

The forest service has issued a bulletin which gives many interesting facts regarding the supply and consumption of timber in this country. The bulletin says: "The lavish manner in which the United States has consumed the products of its forests and the rapidity with which our timber supply is melting away are wholly unappreciated by those who have never given the matter more than passing consideration. Familiar as all are with the use of wood for every purpose and in every industry, it is only when the various items are added that there begins to come a realization of the indispensable place the forests fill in the national economy. Rapidly as the population of the United States has increased, the lumber consumption has increased still more rapidly. In round numbers and allowing for incomplete reports, the lumber cut in 1880 was 16,000,000,000 feet; in 1890, 24,000,000,000 feet, and in 1900, 35,000,000,000 feet. The increase in population from 1880 to 1900 was 52 per cent., but in lumber cut 94 per cent. The United States is now using annually 400 board feet of lumber per capita, while the average for Europe is but 60 feet per capita. The forest area of the United States is sufficient, if rightly managed, to produce eventually timber enough to supply every legitimate need. There is no reason why it should not some day be brought up to the point of yielding an annual increment of more than 30 cubic feet per acre, which would supply the quantity of timber now consumed, and which, if used economically, would be sufficient for a much increased population."

Bessemer vs. Open-Hearth Steel.

If we count the world's steel production in 1906 at 49,000,000 gross tons, the contribution of United States, Germany and Great Britain, which was 40,843,610 tons, leaving out crucible steel, was almost exactly five-sixths of the total. In 1905 the three countries produced a total of 35,868,764 tons, exclusive of crucible steel, so that their gain in 1906 was only 25,000 tons short of 5,000,000 tons. In the table below the *Iron Age* has separated Bessemer and open-hearth steel and acid and basic steel, so as to compare the advances made by the respective processes. As no statistics of crucible steel production are gathered in Germany or Great Britain, only Bessemer and open-hearth steels are considered. Gross tons are used for the United States and Great Britain and metric tons for Germany:

	U. S.	*Germany*	*Great Britain*	*Increase over 1905*
Acid Bessemer	12,275,253	407,688	1,307,149	1,249,498
Basic Bessemer	....	6,772,804	600,189	591,310
Acid open-hearth	1,321,613	230,668	3,378,691	526,884
Basic open-hearth	9,649,385	3,534,612	1,176,245	2,662,686
Castings	Incl. above	189,313	Incl. above	....
Total, 1906	23,246,251	11,135,085	6,462,274	....
Total, 1905	19,912,751	10,066,553	5,889,460	....

The preëminence of the United States in steel making is emphasized in the returns for 1906. Not only did this country make a third more steel than the combined outputs of Germany and Great Britain, but the increase in the United States over 1905—about 3,333,000 tons—was twice as great as the combined increase in Germany and Great Britain, made up of 1,068,000 tons in the former and 572,000 tons in the latter.

CURRENT BUSINESS NEWS.

Commercial.

The following was the value of French foreign trade in the first quarter of the last two years:

	1907	1906
Imports—		
Food	F243,945,000	F184,190,000
Raw materials	993,309,000	932,296,000
Manufactures	252,728,000	226,684,000
Total	1,489,982,000	1,343,170,000
Exports—		
Food	139,168,000	146,731,000
Raw materials	368,404,000	323,991,000
Manufactures	691,349,000	624,315,000
Post parcels	101,680,000	102,257,000
Total	1,300,601,000	1,197,344,000

Secretary Smiley, of the Kansas Grain Dealers' Association, is reported as estimating the condition of wheat in Kansas at 88, against 100 in March He states that the condition has declined from 20 to 40 points, owing to green bugs and drought.

Total copper imported, not including ore, in March, 1907, amounted to $4,363,698, as against $2,778,721 in March, 1906. For the nine months ended March, 1907, the total was $27,640,908, as against $18,802,883 in the similiar period ended March, 1906. The value of copper, excluding ore, exported in March was $8,784,394, as against $7,239,557 for March, 1906. For the nine months ended March the value was $69,923,851, in comparison with $59,449,870 in the similar period ended March, 1906.

Total iron and steel goods, not including ore, imported in March, 1907, were valued at $3,702,060, as against $3,028,592 in March, 1906. For the nine months ended March the value was $31,296,823, as compared with $20,749,674 for the nine months ending March, 1906. The value of iron and steel exports, not including ore, for March was $16,412,616, as compared with $14,790,183 for March, 1906. For the nine months ended March the total value was $132,019,206, as compared with $116,280,765 in the similar period ended March, 1906.

The exports of steel rails for March and nine months show a slight decrease from last year. During March, 1907, 25,384 tons, valued at $745,751, were exported; in March, 1906, 35,431 tons, valued at $905,068, were shipped abroad. Exports for nine months appear as follows:

	Tons, 1907	*Value,* 1907	*Tons,* 1906	*Value,* 1906
Exported to—				
Europe	465	$14,059	3,753	$78,936
British North America	28,970	813,545	23,641	681,629
Central America and British Honduras	5,812	169,719	18,748	508,593
Mexico	26,556	866,838	40,028	1,136,922
West Ind. & Bermuda	19,199	564,146	34,503	867,941
South America	85,519	2,289,295	121,732	2,852,757
Japan	25,481	753,328	8,637	268,021
Other Asia & Oceanica	28,111	847,199	5,420	138,221
British Africa	25	700	704	21,548
Other Africa	881	25,137	13	376
Total	221,019	6,343,876	257,179	6,554,944

In quantity the exports for the period ended March, 1907, show a loss of 36,160 tons from the previous year; in value a decrease of $211,068.

The *Journal of Commerce* figures that the cotton acreage will show an increase. More fertilizers have been used than last year. The crop is about two weeks late, except in Louisiana, Texas and territories, where it is nearly normal. Between 40 and 50 per cent. of the crop has been planted. Much replanting is necessary and there is some scarcity of seed, but the paucity of labor is not serious.

This table shows the trend of copper exports for nine months in each of the past five fiscal years:

In nine months to March 31, 1903, fine copper exports, pounds	230,916,147
Valued at	$28,239,228
Value per pound	12 23 cts.
In 1904, same time	323,439,028
Valued at	$42,204,988
Value per pound	13.05 cts.
In 1905	428,363,656
Valued at	$57,468,834
Value per pound	13.41 cts.
In 1906	348,748,243
Valued at	$56,461,274
Value per pound	16.19 cts.
In 1907	320,866,386
Valued at	$56,100,992
Value per pound	20.61 cts.

Paul Morton, formerly Secretary of the Navy and now president of the Equitable Life Assurance Society, is quoted as expressing the belief that there will never come again a period of national depression with failures throughout the country. The only thing that could possibly produce such a catastrophe would be a total failure of all our crops. So diversified have they become that this is now almost an impossibility, Mr. Morton looks for a continuance of prosperity.

The Kansas report makes the condition of wheat 84, against 99 as per the April government report and 98 for last April. The report stated that bugs were in thirty-six counties, with the condition in Sumner county, one of the first infected, only 58. Secretary Coburn figures that the state will raise a wheat crop of 100,000,000 bushels, the larger acreage offsetting whatever damage has been done.

Foreign crop conditions as published Tuesday in Broomhall's Liverpool *Corn Trade News:* United Kingdom, France, Germany and Italy—Weather continues too cold for crops. Supplies are smaller. Hungary—The weather is rather unfavorable. There have been heavy floods which have rendered the roads in a bad condition, thereby causing delay to supplies. Roumania—Twenty-five per cent. of the winter-wheat crop has been winter-killed, and is now being replowed. The weather continues fine. Russia—The outlook for the wheat crop continues unchanged. Bulgaria—There are moderate complaints heard as a result of winter-killing. Turkey—In European Turkey the outlook for the crop is unsatisfactory, while in the Asiatic provinces conditions are very unfavorable. Spain and northern Africa—There are no changes in crop conditions, which, according to our last report, were, on the whole, fair. India—The government confirms the damage in the Punjab. Argentine—The strike in Buenos Aires is not reaching any serious proportions. The planting of wheat has begun in the province of Santa Fe under favorable conditions. Corn is arriving slowly at the ports, the same being of an unsatisfactory quality. The weather is unsettled. There will be heavy wheat shipments during the next three weeks.

Snow's crop report indicates an average winter-wheat yield of thirteen bushels per acre. The government estimate in December was 31,000,000 acres, says Snow. From this must be deducted a large area winter-killed in the Ohio valley, Missouri and the southwest. No one knows yet how much this is. On the basis of final harvest of 30,000,000 acres of winter wheat, this report indicates not more than a 300,000,000 bushel crop, against a crop last year of 492,000,000 bushels.

The agreement of the German steel trust has been prolonged for five years.

Consul-General Frank H. Mason, at Paris, has sent to the Bureau of Manufactures a detailed report of the measures before the French Chamber of Deputies to increase the rate of duty on American cotton-seed products and shoes. Action on the proposition to change the schedule on cotton-seed products has been postponed temporarily, though the measure increasing the duty on American shoes is pending. The French manufacturers demand an increase of 60 per cent. in the schedule.

The total capitalization of new companies formed in Maine, New Jersey, New York and Delaware, with a capital of $1,000,000 and over, according to the New York *Commercial*, was $98,600,000, a decline of $43,000,000 as compared with the total for March, and $59,300,000 under the aggregate capitalization of April, 1906.

The weekly summary of weather conditions issued by the Weather Bureau Tuesday said: The weather for the week ending April 29 was abnormally cold and unfavorable in all districts between the Rocky mountains and the Mississippi river and also in the upper lake region. East of the Mississippi the fore part of the week was cold, but the latter part was mild and favorable. The Pacific coast states experienced mild, dry weather, which was generally beneficial. The line of freezing temperature was much further north than in the preceding week in the Rocky mountain and Atlantic coast districts, but only slightly further north in the central valleys. Light to killing frosts occurred in northern and western Texas and light frosts in the northern portion of the central gulf states. Very heavy rains occurred on the central gulf coast. A large part of the upper Mississippi and lower Missouri valleys needing moisture received plentiful rains. Severe local storms occurred in portions of the middle and south Atlantic and west gulf states. Snow fell in the Dakotas, Minnesota, Wisconsin and Michigan in depth ranging from one inch to twelve inches, and there was considerable snow on the ground in the upper Michigan peninsula at the close of the week.

The Minneapolis *Market Record* says that 72 per cent. of the wheat seeding in Minnesota and South Dakota is done, but only 15 per cent. was sown in North Dakota. About 17 per cent. of last year's crop, or 30,000,000 bushels, remains in farmers' hands.

King & Co., of Toledo, have received many bullish reports on winter wheat. A cable from Antwerp says that much higher prices were expected there. Liverpool cables that delay to seeding has endangered the crop in Russia, but that it was impossible to say now to what extent. Another dispatch from the English market says: "Continental wheat demand unprecedented; Austria in bad shape; conditions favor higher prices."

The demand for American locomotives continues to increase in foreign markets. In March eighty-eight railway engines, valued at $644,514, were exported; in March, 1906, fifty-two were sent abroad, having a value of $449,526. For nine months ending March exports were:

	No., 1907	*Value,* 1907	*No.,* 1906	*Value,* 1906
Europe	20	$347,850	1	$6,000

Total	743	6,848,054	505	4,715,624

J. Edward Simmons has been elected president of the Chamber of Commerce, vice Morris K. Jesup, resigned.

After July 1 special delivery of a letter may be had by using ordinary stamps equal in value to the present special delivery stamp, it being only necessary to add "Special delivery" under the ordinary stamp.

The French customs administration has finally rejected the new form of meat certificate, under the United States pure food law, thus again rendering American meat unaccompanied by a certificate showing that it has been microscopically examined liable to exclusion. The requirement of a microscopic examination was temporarily suspended some time ago at the request of the United States embassy.

Financial.

The president of the United States Express Company has sent a circular letter to stockholders who want increased dividends, in which he points out that hostile laws are hurting the express business. The increased payments to railroads, higher labor costs and advance in the prices of supplies have kept net earnings down to 5 per cent. of the present gross receipts. In 1906 the company paid the railroads $1,661,000 more than in 1904, and it paid for labor in 1906 $860,000 more than in 1904, while the increase in earnings over 1906 was but $1,552,000. In twelve of the states in which the company does business, laws have been passed enlarging the powers of the railroad commissions.

A New York Stock Exchange seat has been sold for $79,500, compared with $79,000, the last previous sale.

The firm of Charles G. Gates & Co., of which John W. Gates is a member, will be dissolved June 1.

The coinage executed at the mints of the United States during April was: Total gold, $3,543,040; total silver, $1,305,847; total coinage, $5,379,037.

The Pennsylvania Railroad Company, notwithstanding the heavy increase in transportation expenses, after declaring the 3½ per cent. semi-annual dividend, had left a surplus of $4,500,000 out of the last six months' earnings.

The Chicago, Rock Island & Pacific Railroad Company collateral trust 4 per cent. bonds of 1907, series "E," have been stricken from the New York Stock Exchange list.

Internal revenue collections in March:

March	1907	1906	*Increase*
Spirits	$13,282,921	$12,269,678	$1,013,243
Tobacco	4,429,607	4,204,988	224,619
Fermented liquors	4,661,415	3,837,904	823,504
Oleomargarine	95,095	55,843	39,232
Adulterated butter	675	900	*225
Process butter	14,187	15,456	*1,269
Miscellaneous	68,946	71,363	*2,417
Total	22,552,758	20,458,990	2,093,768

* Decrease.

The New York *Journal of Commerce* presents the following table of May dividends:

	1907	1906	*Increase*
Industrials	$21,124,289	$17,556,585	$3,567,704
Railroads	8,749,172	7,806,600	942,572
Street railways	2,257,550	2,063,940	193,610
Total	32,131,011	27,427,125	4,703,886

Charles A. Conant, the well-known writer on money and banking, in an address before the Economic Club of Providence, Tuesday, said that one of the reasons for the recent high rate for money and for the difficulty which the railways experienced in obtaining loans was due to the fact that savings had been too rapidly converted into fixed capital. In this connection he said that the outstanding security issues of the country representing fixed capital amounted to about $34,000,000,000, but that the net amount, after deducting securities held by corporations, was probably about $24,000,000,000.

The receipts from the stock-transfer tax law during the month of April amounted to $397,105, a decrease of $286,166 from the returns of March, or 72 per cent., and a decrease of $163,195 from April, 1906, or 41 per cent.

Wm. A. Read & Co.

INVESTMENT SECURITIES

25 Nassau Street, New York

BOSTON CHICAGO BALTIMORE

In April forty-six national banking associations with authorized capital of $5,480,000 were chartered, of which twenty-six, with aggregate capital of $680,000, were with individual capital of less than $50,000, and twenty, total capital $4,800,000, banks with individual capital of $50,000 or more. National banks in existence, authorized capital, stocks, bonds on deposit to secure circulation, circulation secured by bonds and by lawful money, on March 14, 1900, October 31, 1906, and April 30, 1907, were as follows:

	March 14, 1900	*October* 31, 1906	*April* 30, 1907
Number of banks	3,617	6,225	6,422
Authorized capital	$616,308,095	$845,039,775	$887,684,275
Bonds on deposit	244,611,570	539,653,180	553,199,050
Circulation on bonds	216,374,795	536,033,169	550,204,771
Circ'n, lawful money	38,027,935	46,238,816	49,709,069
Total circulation	254,402,730	583,171,985	599,913,840

The Congress of the Republic of Salvador on Wednesday authorized the executive to negotiate on the most favorable terms possible a foreign loan of $5,000,000 in gold.

Railroads.

Marvin Hughitt, president of the Chicago Northwestern Railway Company, is quoted as saying that the work of the company now in hand will be pushed, but no new extension work will be undertaken. Mr. Hughitt thus describes the railroad situation: "Taxation is higher, wages and the prices of materials have advanced; whereas rates are being reduced both by competition and by legislation."

The lower house of the Texas legislature refused to make the two-cent passenger fare bill a special order for next Wednesday. As the session closes May 11, this action practically kills the bill for this session.

The Florida House of Representatives has passed a bill providing for 2½-cent fares in the state.

Five justices of the Michigan Supreme Court, constituting a majority, have decided that the city of Detroit could not build street-railway tracks to be leased to an operating corporation.

Industrial.

Of the total production of 25,307,191 gross tons of pig iron in the United States in 1906, Pennsylvania made 11,247,869 gross tons, and of this output the Pittsburgh district (Allegheny, Beaver and Washington counties) contributed 6,230,863 tons. In other words, the Pittsburgh district last year made nearly 25 per cent. of the total production of pig iron in the United States, and 55 per cent. of the output in Pennsylvania.

The production of steel in Germany in 1906 is stated below in metric tons:

	Acid	*Basic*	*Total*
Bessemer ingots	407,688	6,772,804	7,180,492
Open-hearth ingots	230,668	3,534,612	3,765,280
Steel castings	77,596	111,717	189,313
Total	715,952	10,419,133	11,135,085

Comparisons are made with previous years as follows:

	Acid	*Basic*	*Total*
1905	655,495	9,411,058	10,066,553
1904	610,697	8,319,594	8,930,291
1903	613,399	8,188,116	8,801,505
1902	517,996	7,262,686	7,780,682
1901	465,040	5,929,182	6,394,222
1900	422,452	6,223,417	6,645,869

According to the *American Federationist*, 1,321 labor unions with a membership of 110,000 reported 1.3 per cent. of such members without employment in March, as against 3.2 per cent. in February. In March, 1906, the ratio of unemployed was 1.75 per cent.

Fourteen new cotton mills, with 424,000 spindles and 7,750 looms, have been started in New Bedford the past year, and several will be added this summer.

Miscellaneous.

The Weather Bureau reports that April had a lower mean temperature—45 degrees—than any other April since 1875, and more snow fell than in any April on record.

Canada's immigration returns for March, closing the fiscal year, show a total immigration for the nine months of 126,667, an increase of 37,859, or a little over 40 per cent. Immigration from Great Britain increased 48 per cent., and from other continental ports 75 per cent. The returns for March are the best on record in respect to European immigration.

Quotations for Government, State, Railroad and Miscellaneous Bonds, Week ending May 2.

STATE OF TRADE.

[A Summary of Special Telegrams to BRADSTREET'S.]

Unseasonably cold weather still hampers trade and crop development, though there is a slight improvement noted in the latter direction because of the receipt of ample moisture in the southwest. To offset this, however, it seems certain that May 1 crop conditions will show deterioration in winter wheat, a later than normal spring wheat seeding and backward cotton planting, with much replanting necessary and seed scarce and high in price. Retail business has been chiefly affected so far, but jobbers and wholesalers report that April trade as a whole does not equal that of April a year ago, though the volume of business for the four months' period is considerably in excess of 1906. Collections are likewise showing some effects of delayed trade, while improving where weather conditions have been temporarily favorable. Reports as to advance orders booked for fall are quite encouraging—in excess of this time a year ago, in fact—though a few lines note hesitation as to booking far ahead. Industry, as a whole, is actively engaged; May 1 strikes, largely confined to building trades, do not appear nearly as serious as in previous years, and the tone in the iron and copper trades appears somewhat stronger, and a greater disposition to book freely for the last half being noted in pig iron. On the other hand, the leather trades are quiet as a whole, though more has been done in some lines owing to output being restricted, and hides are firmer. Bank clearings note a continuance of April tendencies in showing decreases from a year ago at most large speculative centers, but with the majority of cities still showing gains. The coal trades have benefited by weather conditions throughout a wide area. Railway earnings still show large gains in gross receipts, but March net returns are irregular. A feature deserving of notice is that grain and cotton prices are higher this week, continuing the advances of last week, mainly because of poor crop advices, but in the case of wheat also, because European crop advices are not much more favorable than in this country.

Bad weather and crop reports have pulled the grain and cotton markets out of the rut of speculative dullness. Something like an old-time bull market in wheat developed this week, with a net advance of 2 cents after sharp upward and downward moves, brought about by conflicting crop reports. The market was strong early on reiterated bug and drought damage reports, but weakened on Monday and Tuesday on claims of copious moisture in Kansas. On Wednesday a sharp advance occurred on renewed cold weather west of the Mississippi river and bullish estimates pointing to a heavy decline in wheat condition as a result of a month's bad weather. Snow's report pointed to April 1 estimates of yield being cut 100,000,000 bushels by damage and abandonment of winter-killed area. Export trade was checked by the advance, though offers are better, owing to poor reports from Europe, which also feels the effects of a backward spring. The German official report showed a condition of 66, against 78 a year ago. Interior offerings were lighter this week. Corn prices hardened 1½ cents on light receipts, sympathy with wheat, and weather unfavorable to planting. Oats advanced 2 cents on cold-weather damage reports. Wheat advanced 3 to 7 cents in April, varying with the market; corn advanced 6 cents and oats 4 cents.

Bad weather and crop reports and advices of large replanting being necessary in the central and eastern sections more than offset the reports of heavy rain in Texas, where, however, cold weather was reported. Reports of poor seed and of continued large demand for actual cotton helped to make the position of the shorts an uncomfortable one. May and July showed the heaviest advances, with gains of 36 and 39 points respectively, while next crop gained 17 to 21 points. Spots gained 25 points.

Crop conditions are still very irregular. Winter wheat has been improved by rain or snow in Kansas, Oklahoma and Nebraska, but the weather has continued very cold and higher temperatures are imperatively necessary. April, as a whole, was the coldest recorded for thirty years. Bug damage is reported to have spread well over Kansas. In the eastern half of the belt winter-killing is claimed to be more perceptible. In the northwest snow and freezing weather delay planting. In Minnesota and South Dakota 75 per cent. of the spring wheat is planted, but in North Dakota only 20 per cent. is in the ground. Corn planting is beginning in Iowa and Nebraska. Oats have been hurt by cold weather, and much replanting is necessary. Frosts have seriously injured small fruits and vegetables in Nebraska, Texas and Colorado.

Heavy rains have broken the drought in Texas, but it is still altogether too cold for corn and cotton. In the lower Mississippi valley much replanting of cotton is necessary, and there is a shortage of seed. In Arkansas the crop is three weeks late, and seed has advanced from $15 to $50 per ton. In the Memphis district much replanting is necessary, and insects have done damage. Record-breaking April rains caused damage near Mobile. The Florida truck and orange crops will be short because of lack of moisture early in the year. The weather has been more favorable for planting in Georgia and the Carolinas, but the season is backward.

The pig-iron market is stronger, and the volume of business in foundry iron, heretofore comparatively quiet, has expanded, and prices have advanced. Southern interests have done considerable business for second-half delivery, and it is reported that many furnaces are practically sold up for the remainder of the year. It is figured that the available supply of pig iron in all districts for the balance of 1907 is very small, and on that account higher prices are looked for. In the central west there appears to be very little steel-making iron on the market, but in the east sales of basic pig for second-half delivery have been made at $23 to $23.25, delivered, and some spot iron went for $24. Over-sea markets are also higher. Structural material is in heavy demand, but orders for steel rails for 1908 delivery are not coming in very well, though large inquiries are said to be pending. Wire products, bars, tinplates, sheets and cotton ties are very active, with sheets bringing a premium for fairly prompt delivery. The situation as regards plates is very strong, and it is stated that the leading interest was compelled to refuse an order for 30,000 tons offered by a western car builder. Cast-iron pipe is active in the west, though quiet in the east. Several grades of old material are higher. Coke is weak, owing to heavy production, better transportation facilities and the closing of blast furnaces for repairs. The market for copper is firmer, with European melters making fair demands, but American interests have been light purchasers. It is said, however, that consumers who have been holding off for a month or so in the hope of lower prices will be compelled to come into the market shortly.

April failures as reported to BRADSTREET'S number 733, an increase of 7.4 per cent. over April, 1906, but a decrease of 4.1 per cent. from April, 1905. Liabilities aggregate $9,887,901, an increase of 25 per cent. over April, 1906, and of 5.3 per cent. over April, 1905. The increased casualties are found largely in the middle and western states; the excess in liabilities is most notable in the middle states group, outside of the metropolis.

Stagnant stock speculation at New York reduced April clearings below those of March, and of April one and two years ago. The total clearings at ninety-seven cities for April aggregated $12,536,662,604, a decrease of 13.7 per cent. from March, and of 2 per cent. from April, 1906. New York clearings decreased 10.2 per cent. from April last year, but outside of the metropolis clearings aggregates gain 14 per cent. For four months clearings at all cities aggregate $53,674,930,926, a decrease of 1.3 per cent. from a year ago. New York City clearings are 6 per cent. smaller, but outside of that city they are 8.7 per cent. larger.

Activity in the New York stock market, while on the whole greater than of late, is restricted to comparatively few stocks. Union Pacific has been the great feature on indefinite rumors of a holding company which it is alleged will take over its investments in Southern Pacific and other stocks. The manipulation of this important member of the list has been very active, and is reflected in substantial advances in other parts of the list. Amalgamated Copper has also been a feature on the rise in the copper metal market. Atchison shares and 4 per cent. convertibles were adversely influenced by an announcement of a new issue of convertible bonds bearing 5 per cent. The bond market at large continues stagnant. Foreign exchange is dull and firm at 4.86.40 for demand sterling.

Bank clearings for the week ending May 2 aggregate $2,888,481,000, 10 per cent. over last week, but 17.6 per cent. below this week last year. Outside of New York exchanges amount to $1,157,440,000, 9 per cent. over last week and 6 per cent. over the corresponding week last year.

Business failures for the week ending May 2 number 163, against 157 last week, 139 in the like week of 1906, 193 in 1905, 176 in 1904 and 175 in 1903.

Wheat, including flour, exports from the United States and Canada for the week ending May 2 aggregated 2,234,756 bushels, against 2,580,242 bushels last week, 2,104,748 bushels this week last year, 1,279,864 bushels in 1905 and 5,308,155 bushels in 1902. For the past forty-four weeks of the fiscal year the exports are 143,800,487 bushels, against 113,606,149 bushels in 1905-06, 53,593,074 bushels in 1904-05 and 217,128,033 bushels in 1901-02. Corn exports for the week are 1,817,695 bushels, against 1,611,041 bushels last week, 1,035,315 bushels a year ago and 2,715,676 bushels in 1905. For the fiscal year to date the exports are 61,427,937 bushels, against 103,837,343 bushels in 1905-06 and 69,879,086 bushels in 1904-05.

IN CANADA.

Except for backwardness, due to cold weather in the northwest, retail trade keeps up well and wholesale trade is good, the complaint being that deliveries are still behindhand. Increased population and prosperity in all lines guarantee a large trade. The railways are winning out of their blockade, and shipments of goods by water routes are large. Collections have improved, as a whole, and commodity prices are firm. The strike in British Columbia promises favorably of settlement. Canadian failures were 28 per cent. more numerous in April than in the same month a year ago, but liabilities fell off 47 per cent. Canadian clearings for April were 17.5 per cent. larger than a year ago, while for four months a gain of 10 per cent. is shown. Failures for the week number 25, as against 23 last week and 20 in this week a year ago. Clearings for the week aggregate $77,328,000, a gain of 3 per cent. on last week, but a decrease of six-tenths of 1 per cent. from this week a year ago.

THE CROPS.

COLD WEATHER RETARDS CROPS. DROUGHT RELIEVED BUT GROWTH RETARDED. SPRING-WHEAT SEEDING LATE. BUGS IN KANSAS. OATS HURT. WINTER-KILLING MORE EVIDENT. TOO COLD FOR COTTON. MUCH REPLANTING NECESSARY. SEED SCARCE.

CHICAGO.—Wheat-crop prospects are spotted owing to killing frosts in many parts of the winter-wheat section, March and April weather continuing into May. Prospects for the entire breadth of the winter-wheat territory are slightly less promising. Rains over Kansas and Oklahoma and rain and snow in Nebraska have relieved the crops, but ravages by the green bugs continue to increase in southern Kansas, being in nearly all the leading counties. They have also spread in Missouri and Illinois. Winter-killing has also become more apparent in the central western states. Growing weather is needed for all crops. Seeding of spring wheat in the American and Canadian northwest has been delayed by low temperatures. In Minnesota and South Dakota 75 per cent. of the area has been seeded, but in North Dakota hardly 20 per cent. is in. Oats have been reseeded in western states and have been damaged in Kansas and Oklahoma by bugs. Corn planting has commenced in Iowa. April has the record of being the coldest in twenty-five to fifty years, according to the localities considered.

INDIANAPOLIS.—The wheat crop in Indiana remains practically unchanged. Estimates of this year's yield vary from 50 to 85 per cent. of that of last. Peaches, plums and cherries are considerably damaged, but apples generally are reported in good condition. Garden truck is a month late in some sections. In only a few instances has corn been planted on account of the unseasonable weather. Oats are reported in fair condition.

CINCINNATI.—Crop conditions are more favorable. Wheat looks well. Much spring plowing is done.

ST. PAUL.—Seeding is finished in southern Minnesota and is in progress in the central part. But very little is being done north of Fergus Falls. In North Dakota snow still lies in the northeast corner as far west as Lakota and south to Grand Forks, and grave alarm is felt. Seeding has begun in the rest of the state.

ST. JOSEPH.—Cool weather still retards wheat. A good rain April 29 improved conditions over last week. Present conditions are considered favorable.

SIOUX FALLS.—Considerable damage has been done to crops, and much reseeding will be necessary.

SIOUX CITY.—The weather is still cold. The ground is being put in shape for corn planting.

MINNEAPOLIS.—Seeding in the northwest progresses slowly, operations in that direction being interfered with by continued unseasonable weather.

ST. LOUIS.—Cold weather continues to have its effect on the growing wheat, and there seems to be some anxiety in that direction. However, the general feeling is that crop prospects will brighten very materially with a few warm days. There has been a reasonable amount of rain throughout the entire winter-wheat belt during the past week. Farmers and others continue to market their old crop at the advanced figures, with the belief that the winter-wheat crop will not be materially affected, except in Texas and possibly Oklahoma.

KANSAS CITY.—Reports from Kansas are that rains have been general throughout the state, and the outlook for winter wheat is much brighter. It is thought that the progress of the green bug has been checked in that state. With good growing weather, conservative judges are of the opinion that the damage so far by drought and insect in Kansas will not exceed 15 or 20 per cent.

WICHITA.—All crops have been materially improved by drenching rain. The weather is still unseasonable.

OMAHA.—Corn planting is now in progress. While winter wheat has not made much progress the past week, it is reported in good condition. Oats have suffered considerably. Fruit, except late apples, is thought to have been killed.

LITTLE ROCK.—The cotton crop is three weeks late, and replanting is necessary on account of cold, wet weather. The price of seed has advanced from $15 to $50 per ton.

MEMPHIS.—Weather conditions have been unfavorable for growing crops. Replanting is necessary in many instances. Cutworms are eating corn and cotton which were not damaged by the frost.

ATLANTA.—Weather conditions have been excellent for cotton planting. The peach crop in high lands is reported safe.

MONTGOMERY.—Recent cold weather damaged cotton heavily, and practically the whole crop will have to be replanted. It is feared that shortage of seed will be experienced in many sections.

MOBILE.—All previous records of rainfall for April were broken in this vicinity during the month just ended. Young crops suffered considerably, and replanting was greatly retarded. However, fair weather prevailed the past few days.

AUGUSTA.—Farmers are busily engaged in planting cotton, having been delayed by unfavorable weather.

BIRMINGHAM.—Farming operations are backward because of the inclement weather.

JACKSONVILLE.—The truck crop has been considerably diminished by drought. Orange trees are not blooming for lack of moisture, and a very short crop is inevitable.

NEW ORLEANS.—Much replanting of cotton is necessary. There is a shortage of seed. Other crops are in good shape.

DALLAS.—The weather has been extremely cold for the season, and in some sections heavy rains, accompanied by wind and hail, are reported to have considerably damaged corn and cotton. It is believed that the peach crop will be a total failure.

FORT WORTH.—Heavy rains have fallen over nearly the entire state, which will result in much benefit. Warmer weather is, however, badly needed for growing crops and vegetation.

WACO.—Recent cold weather delays both cotton and corn crops.

SPOKANE.—Frosts have greatly injured small fruits.

PORTLAND, ORE.—Crops of grain and fruit promise well with favorable weather conditions.

TRADE REPORTS.

At New York the dry-goods trade generally is transacting a good, steady business. The strong, active demand for goods which was apparent during January, February and the first two weeks in March has abated. There has been some cancellation of purchasing orders from western houses, it is believed owing largely to the condition of the weather the past six weeks. The cutting-up trade, it is understood, also has more goods on hand than it requires, as many of them overbought, and now they have piece goods to sell. It is thought, however, that they will easily get their money out of them. There is a scarcity of goods in some lines of cottons, and prices are strong and well maintained. The print-cloth supply is now in the hands of a very few. The dress-goods business is of good proportions and appears to be in a very healthy condition. Silks are also in strong and active demand, and, on the whole, the trade report things satisfactory. Collections on May 1 are reported to have been good, and the 5 per cent. rate on commercial paper during the past week has resulted beneficially. Some first-class single-name notes sold as low as 4½, but the prevailing rate is 5 per cent., which is regarded a very healthy condition. Cotton yarns are strong and high in price, spinners generally being far behind on orders and booked away ahead. Woolens yarns are also scarce, especially in the higher grades. Raw silk is firm and prices have a higher tendency. In the manufactured article there is a very strong demand for blacks, and they are difficult to obtain. A brisk business continues to be transacted in shirts, gloves and neckwear at wholesale, and some houses are unable to fill their orders owing to a scarcity of goods. Jobbers of hosiery and knit goods also complain of being unable to obtain sufficient stock, but believe, nevertheless, that prices will not grow higher. Few mills are now using shoddy, and the trade is very quiet. The wholesale grocery trade is dull, and there has been some falling off in orders. The retail trade is satisfactory. Receipts of eggs are very large and quantities are being stored, which helps to keep the price steady. On heavier receipts butter dropped 7 cents. Business in wines and spirits is generally fair, the decision by the government regarding blended whiskies having a stimulating effect, and trade in Kentucky whiskies is particularly active. The California wine market is quiet and prices unchanged. Collections are now very slow, but this is attributed to some extent to the renewing of licenses. Flour receivers are waiting, and jobbers are unwilling to meet the advance asked for by the millers, who cannot replace the wheat on hand at present quotations. Arrivals of live stock and dressed meats are fully up to requirements, but the small-stock market is not in such a satisfactory condition. Petroleum is in good demand both for home consumption and export, and an advance in price is predicted in the trade. China and glassware are in less demand. A similar condition is noticeable in the hardware trade, more especially in builders' hardware. Prices, however, continue firm, and there is some improvement in collections. Pig iron is in better demand and prices are steady. Structural steel is also in request. Machinery dealers are busy, but manufacturers of electrical goods complain of slow collections. Bristles are in steady demand, and considerable quantities are still required to complete contracts. Importers say conditions point to higher prices. Manufacturers of cast-iron pipe, heating apparatus and plumbing supplies are beginning to catch up with their orders, new business being of smaller proportions. A steady business is done in tobacco and cigars, but prices of the raw material continue high, and the margin of profit is consequently smaller; collections are fair. Paper is in slightly less demand, but prices are unchanged. Conditions in the lumber and building-materials trades have not improved and are not entirely satisfactory. Demand is light, collections are slow, and there is considerable renewal of paper.

The following telegrams show trade conditions at the cities mentioned for the week ending May 3:

BOSTON.—Hemlock and union sole leathers have sold well at firm prices. Tanners of union sole leather are now producing only one-quarter to one-half normal capacity, taking the season to make repairs and clean up vats. Shoe factories are turning out an average amount of footwear in the aggregate, although manufacturers selling to jobbers have been disappointed in duplicate orders on spring goods and on orders thus far placed for fall footwear. American hides are firmer. Foreign markets are so much higher by comparison that brokers find few buyers interested. Paper holds firm at quotations recently prevailing. News paper is reported especially firm in tone and limited in supply. Business in paper stock is of only moderate proportions, and prices show a declining tendency. Collections are beginning to come in in larger quantities, but buyers seem disposed to wait for lower prices before ordering generous amounts. Jobbers of furniture, carpets and pianos have had a good volume of spring business, but retail trade has been retarded on account of the backward weather, and collections are somewhat slow. In old metals and scrap iron the market is fairly active. Copper shows no material change. Pipe iron is in increased demand. Lumber is quiet, but prices are firm. In painters' supplies demand is satisfactory, though turpentine has declined. Anthracite coal stocks are light, with fair demand. Bituminous dealers complain of scarcity of vessels for transportation, many having been lost the past winter. In wholesale liquors trade is inclined to quietness. Brewers are getting ready for a busy season, and demand for beer and ales is increasing. Trade in leaf tobacco is only moderate. Manufacturers are busy, but are purchasing for immediate wants only. Manufacturing confectioners' trade fair and increasing. The new catch of mackerel is beginning to arrive in small quantities, but other fish is in good supply.

PROVIDENCE.—The manufacturing jewelry trade is in a good condition for this season of the year. Jewelry supply houses generally report a fair business, but collections are slow. Retail trade has been affected by cool weather. In the building line business is of fair volume, and the machinery and tool trade is in an excellent condition, prices holding firm.

PORTLAND, ME.—Warmer weather is stimulating trade. Wholesale grocery, produce, millinery and dry-goods houses report good sales and collections.

PHILADELPHIA.—There is little change in trade so far as textile manufacturers are concerned. While there may not be quite as much demand for goods, the majority of manufacturers are running full or nearly so, and some have sufficient orders to run them into the summer months. Dry-goods jobbers report a fair trade, with collections fair to good. Flour is hard to sell, especially as millers are disposed to advance quotations in sympathy with wheat. Chemicals and dyestuffs are dull, but prices show no change. Paints and glass are not particularly active and early season expectations are not being quite realized, but prices are firm and the market rules strong. Lumber dealers report business not quite so active, but order books are well filled and quotations are strong. Hides and skins are stronger, with a slight improvement in demand. Leather continues unchanged on a fair volume of business. Wholesale and retail shoe dealers report increased business, with large demand for tan shoes due to weather conditions, which are more favorable. Tobacco moves slowly; crops have been short and goods are scarce. There is no change in the iron situation and no evidence of weakening. Demand and prices continue strong, and the probability of this continuing throughout the year increases. Coal is in a more satisfactory condition, demand improved, and prices materially advanced for bituminous coal.

PITTSBURGH.—In the pig-iron market there has been an active inquiry, sufficient to absorb all the unsold iron of all grades for the balance of the year. During the week sales of Bessemer and basic for delivery during the last half of the year, aggregating over 14,000 tons, were made, a portion of which was sold at $23, valley, and the balance a shade higher than this figure. In finished lines specifications continue heavy, though new business is not coming forward in as large a volume as several weeks ago. Favorable weather for building operations has largely increased the demand for structural material. Coke is still weak and prices are softer, owing to increased production, eight or nine furnaces being out of blast, and better transportation facilities. Quotations for spot pig iron at the valley furnaces are nominally as follows: Standard Bessemer, $23; chilled basic, $23; No. 2 foundry, $24, and gray forge, $22.15. Standard Connellsville furnace coke is quoted at $2.40 to $2.60, and foundry coke at $3.25, at the ovens.

BUFFALO.—Trade appears to be as good as last week, and with continued favorable weather should gradually increase from now on. Navigation is fully opened, and large shipments of grain have been made via the Erie canal. The live-stock market is active and prices are firm.

BALTIMORE.—Continued unseasonable weather has reduced sales in various retail lines, the principal sufferers being clothiers, who began May with unusually large stocks and have made more demands for loans than last year. Men's furnishings and shoes, as well as dress goods and kindred lines, have also felt weather conditions. Paper has been fairly active, with mills making further advances on certain grades; jobbers are busy, mill deliveries easier and collections fair. Business in woodenware, crockery and tinware continues well up with that of 1906. Drug jobbers report April business of good volume, but sales do not reach those of March. An improvement is noted in lumber, with numerous inquiries and demands for better grades. The general outlook for building operations is favorable. Clothing manufacturers report a satisfactory volume of fall orders, but collections are only fair. Southern business in dry goods and notions is slack, merchants awaiting more seasonable weather to move their stocks, which are larger than in 1906. Filling-in business has been moderate. Shoe jobbers note slow collections and little demand for immediate shipment, though a satisfactory fall business is being done by salesmen on the road. Wholesale grocers report collections poor, with business locally of reduced volume. Banks report demand for money somewhat eased up, requests being more from retailers than jobbers, the latter being supplied prior to May 1.

CINCINNATI.—Jobbing lines show improvement. The backward season has adversely affected collections, yet there has been a satisfactory volume of business done with country banks.

CHICAGO.—Trade conditions are favorable. A large business is under way, and the slight reductions here and there are regarded as a healthy sign after the unprecedented activity. Dry-goods houses are selling far more goods for fall delivery than a year ago. Retail trade has been held in check by cold weather, but is now slightly better. Clothing and shoes are having a fair sale. Orders for steel rails for 1908 are light. Last year over 600,000 tons were booked in two weeks after the books opened, whereas this year only about 100,000 tons have been purchased in the west. This is due to the earlier opening of books and adverse legislation in various states. Other iron and steel products are in good demand. Steel plates are active, and mills are so closely sold up that an order for 30,000 tons was refused. Implement makers are buying steel more readily, and structural material is being taken freely. Inquiries for cast-iron pipe have increased. Pig iron is held 50 cents to $1 higher, due to recent active buying in northern and southern districts. Stocks are small and local furnaces are well sold up for the year. Coal is selling freely for the season. Lumbermen and dealers in building materials report increased activity and strong prices. Business in dry goods, paints and oils is good. Potatoes are higher; cattle are lower, hogs a shade higher, and sheep and lambs are unchanged. Receipts of cattle and hogs decreased, but those of sheep increased. Money is easier, loans decreased, while deposits increased. Commercial paper is selling freely at 5½ to 6 per cent. Collections are fair.

PEORIA.—Wholesale and retail trade is quiet. Unfavorable weather affects some lines, but merchants are looking forward to increased business when the weather warms up. Collections are fair.

INDIANAPOLIS.—In the glass and jewelry trades business is reported to be very good, and collections are easy.

ST. LOUIS.—Retail trade is dull owing to unseasonable weather. Retail trade in April fell off 20 to 35 per cent. This loss is being felt by manufacturers and jobbers, yet the majority report satisfactory trade. Collections are somewhat behind last year, but failures in this section are light. Money is somewhat easier, though rates are still firm.

KANSAS CITY.—Reports from traveling salesmen in leading lines continue to show increased business for future delivery. Filling-in orders in dry goods and kindred lines are in excess of a year ago. Retail trade is active and collections are good.

MILWAUKEE.—Business in jobbing lines is only fair, and in retail it is unsatisfactory, owing to weather conditions. Collections are slow.

SIOUX CITY.—Trade conditions are affected by the cold weather. Collections are fair.

DAVENPORT.—Retailers and jobbers of wearing apparel and kindred lines report April business from 5 to 25 per cent. less than for the corresponding month last year, caused by cold weather. Other lines report business equal to or in excess of 1906. Collections continue slow. A good demand for money prevails.

ST. PAUL.—The snowstorm of last Saturday, precipitating a foot of snow, has had a bad effect on the volume of business, and sales are not up to expectations. Collections are coming in fairly well, and some money has come from North Dakota.

MINNEAPOLIS.—Cold weather still retards business, though jobbers and retailers say sales exceed last year's. Collections are improving. Flour is quiet and prices are unsettled, owing to crop conditions. Lumber is in excellent demand.

OMAHA.—General trade is retarded by unseasonable weather, but sales in most lines are in excess of last year's. Collections range from fair to good.

LINCOLN.—Cold weather still retards business in most lines.

SIOUX FALLS.—Cold, cloudy weather, with snow, continues to hold back general business.

CHARLESTON.—Jobbing trade is quiet, but retail is good. Building is active. Collections are slow. Cabbages are still being shipped in large quantities at good prices.

RICHMOND.—Wholesale dealers in and jobbers and manufacturers of shoes are in the midst of

spring shipments. The season has been a good one, and ordering generally has been liberal. Travelers are out with fall samples, and future prospects are encouraging. The position of this city in the wholesale shoe industry is being strengthened. It is extending its efforts further into the south and southwest with profitable and encouraging results. Offerings of leaf tobacco are small, but prices continue high. Retail trade has been affected by continued cool weather. Collections are not good.

AUGUSTA.—Trade, wholesale and retail, is only fair. Collections are fair.

ATLANTA.—Trade is fair.

JACKSONVILLE.—Trade is quiet and collections only fair.

BIRMINGHAM.—Southern foundry No. 2 pig iron is scarce for immediate delivery at $23. Larger companies have sold through the third quarter. Trade in general is not so good, and collections are a little slow.

MOBILE.—Retail trade is active, but jobbers report business quiet, with collections fair. Naval-store products are firm, with no surplus stock on hand.

MONTGOMERY.—Wholesale trade is very poor. There is some activity in retail dry goods. Collections are very slow.

CHATTANOOGA.—Trade conditions are satisfactory. Collections are about the average.

KNOXVILLE.—Railroad construction work suspended in January, or handled with reduced force since then, is now being actively pushed. While no new lines are projected, contractors report sufficient work to insure a busy season. Manufacturing in all lines compares favorably with the same season last year. Knitting mills find ready sale for their output, and in a number of cases plans are on foot for increased capacity. Jobbing business continues good. Collections are fair.

MEMPHIS.—Wholesale spring business is about over. Jobbers report a fair volume of filling-in orders. Retail trade is delayed by wet, cold weather. Collections are slow.

NASHVILLE.—Wholesale trade is quiet. Retail trade is fair. Collections are fair to good.

LITTLE ROCK.—Trade has been reduced by unfavorable weather, but good business is expected with warmer weather. Collections are fairly good.

NEW ORLEANS.—Unfavorable weather still hampers jobbing and retail trade. Collections are fairly good.

FORT WORTH.—Trade is active, but collections are a little slow.

DALLAS.—Trade is quiet. Collections are fair.

WACO.—Trade is satisfactory, and collections are fair.

SAN FRANCISCO.—Industrial differences have marked the week, ironworkers having struck, and negotiations with street railway employees have reached a critical stage. Lower prices for brick, lumber and lime have given greater energy to construction.

SEATTLE.—Collections have improved. There is some activity in shipments to Alaska, a number of Alaskan buyers being in the city. Wheat is arriving in large quantities.

SPOKANE.—Business is active in most lines, but collections are still slow.

TACOMA.—Wholesale and retail trade continues good. Weather conditions are favorable, and building is active.

PORTLAND, ORE.—Jobbing trade is very active, all lines showing a marked increase over preceding years.

TORONTO.—Wholesale dry-goods houses here are doing a hand-to-mouth business in a great many lines owing to their getting supplies in small lots, and even at that at uncertain periods. In fact, as a wholesaler said recently, they are mostly busy making excuses for the non-delivery of goods. The volume of trade, however, is heavy; it is likely that it is greater than that of any previous season. The demand for all lines of goods in Canada this season is extremely large, and it is mainly by reason of the increased population, although the prevailing prosperity is, to a great extent, responsible. This is in the face of price advances in nearly all lines. Travelers are out with fall and winter samples, and they report the outlook very bright. Orders are large. The delay in making shipments to retailers may cause the latter to go slow on later orders. Business in ready-made cloaks and general clothing is very heavy. Orders have been much heavier than last year, but repeat orders are also expected to be large. There is a heavy trade doing in woolens and dress goods. All other lines of trade have become much more active since the opening of navigation, and in groceries and hardware shipments have been large. There is a general feeling of firmness in all commodities. Farmers are busy on the land, and country trade is a little quiet. Collections are fair to good. Country produce is easier. Wool is quiet, and hides and skins are dull and unsettled.

MONTREAL.—Fairly good weather has kept up demand at retail, and expectations now are for a good season's trade in all lines. Generally speaking, retailers are not carrying heavy stocks. In most branches of trade they have been unable to obtain the full amount of their orders. Wholesale trade is reported very active. Large shipments are being made by boat, and the opening of navigation at this port will still further increase the volume of this business. Collections are generally reported fair. The wholesale dry-goods trade is as active as slow deliveries of manufacturers' shipments will permit. Price advances are reported on foulards, sateens, cheese cloths, lawns, etc., and flannelettes and silks are expected to advance further. All hardware stocks are moving well. Metals continue in active demand and are firm in tone. The demand for groceries is improving. Butter prices have declined sharply owing to heavier receipts. The demand for cheese is quiet, there being little inquiry for export. Hides have again gone lower.

VANCOUVER-VICTORIA.—There is continued activity in almost all branches of trade here. The coal strike in the British Columbia mines has not yet had a serious effect. The matter is still awaiting settlement, but the importance of this settlement is so generally recognized by all parties that any day may see the men back to work. Wholesale lines are moving briskly in all directions. There is still considerable delay in deliveries, but the past week or so has seen some improvement in this regard. Values generally hold firm. Collections are good in almost all districts. The shipping trade is heavy, and would be heavier if it were not for the congested state of the railroads.

WINNIPEG.—So far, spring trade has suffered somewhat from the unsatisfactory weather, although a turn for the better took place in the latter part of the week. Spring and summer lines have been slower than usual in moving, but the volume of business has, on the whole, been fairly satisfactory. Grocers report a better business, and hardware men are busy, Collections have improved somewhat. The opening of navigation in the canals has helped the grain movement. The railways are making considerable headway in overcoming the blockade. This being the case, it should not be long before money is fairly free. Seeding is now pretty general and farmers will not be greatly behind in their work. Building operations throughout the west are exceedingly large. It is estimated that building will exceed last year.

Money Market.

During the past week some $1,500,000 of gold has been shipped from New York to Canadian points. The action of the Treasury in the money market was not altogether favorable to the banks, which seem, notwithstanding, to have gained about $1,000,000 cash on the net movement of funds. The supply of money in the New York loan market continued ample, and the fact that renewals of call loans were generally made at 2¼ per cent. checked any demand for time money, making transactions in that class of accommodation rather limited. There continues, however, to be some inquiry for loans running over January 1, 1908, for which 5 per cent. is asked, and in some instances paid, as against 4 per cent. for six months' money. It is noted that some large loans have recently been made on industrial collateral solely, the borrowers in such cases naturally paying about ½ per cent. above the prevalent rate for loans on mixed collateral. Commercial paper is somewhat more active, there being a better demand from out-of-town buyers, while the supply of prime names is also showing an improvement.

New York Banks.

Some surprise was occasioned by the fact that the Clearing House statement of last Saturday exhibited a decrease of $1,587,300 in the average of loans for the week instead of the anticipated further increase in that item. The result was generally accepted as indicating that the process of transferring loans from interior banks and trust companies to the New York banks was practically completed. This was the only really important feature of the statement, the cash items showing an average increase of $146,900 in spite of an estimated actual loss of about $1,000,000, and at the same time the deposits fell off $1,980,200, reducing the reserve requirements by $495,000. Owing to the above changes the surplus reserve increased $641,950. The figures of the statement compare as follows with those of the preceding week:

	April 27	*April 20*	*Changes*
Loans	$1,123,417,600	$1,125,004,900	D. $1,587,300
Specie	213,126,300	215,129,400	D. 2,003,100

Bank Clearings.

[By Telegraph to BRADSTREET'S.]

BRADSTREET'S Bank Clearings Report for the week ending May 2 shows an aggregate of $2,888,481,000, as against $2,621,560,000 last week and $3,506,922,000 in the corresponding week last year. Canadian clearings for the week aggregate $77,328,000, as against $75,109,000 last week and $77,844,000 in this week a year ago. Following are the detailed returns by cities for this week and last, with percentages of increase or decrease as compared with this week in 1906:

	May 2	*Inc.*	*Dec.*	*April 25*

Foreign Exchange.

Dealings in foreign exchange at New York were on a moderate scale this week, there being only a moderate supply of either commercial drawings or of finance bills. At the same time the inquiry was fairly good, and as a result the tone of the market was steady and the variations in the quoted rates were small, though there was a somewhat steadier tendency toward the end of the week. No special change occurred in the foreign money markets, it being noted, however, that the weekly statement of the Bank of England showed a slight falling off in cash and in the percentage of reserve to liability. This created a slight hardening in open market rates at London, but did not seem to cause any specially unfavorable comments.

POSTED RATES OF LEADING DRAWERS FOR LONG AND DEMAND STERLING.

Apr. 27	*Apr.* 29	*Apr.* 30	*May* 1	*May* 2	*May* 3

Closing quotations on Friday for actual business in other classes of bills were: Cables, 4.86.60@4.86.75; commercial bills, 4.82⅞@4.83¼; francs, 5 20⅝@5.17½ plus 1-32; reichsmarks, 94 5-16@95 1-16 plus 1-32.

The Bank of England's discount rate is unchanged at 4 per cent. Its specie this week decreased £433,000, and its proportion of reserve to liability fell from 45.32 per cent. to 45.21 per cent. In the London open market call money is 2@2¼ per cent., while discount is 3 3-16@3¼ per cent. The Bank of France this week reported an increase of 1,700,000 francs in its gold. Its rate of discount remains at 3½ per cent., and in the Paris market the quotation for money is 3 5-16 per cent. At Berlin the bank rate is 5½ per cent. and the market 4⅝ per cent.

New York Securities Market.

Speculative activity in the New York market is still mainly confined to professional interests. The trading, in fact, has centered in a comparatively few stocks, and the public still seems entirely indifferent, manifesting, indeed, a continuance of unfavorable feeling toward railroad securities, either for investment or speculative purposes. Unfavorable crop news from the west had some influence, although it entirely failed to impose any check upon the bullish manipulation in Union Pacific, which has been the principal market feature. The action of this stock has, indeed, been the object of not a little surmise, the chief rumor in connection with the property being that a holding company is to be organized to take over the control of the Southern Pacific and possibly the investments in other stocks which have been made by the Union Pacific management. No actual confirmation of the story, or in fact any indication of what the intentions of the Harriman party are, can be obtained, and, as is not infrequent in such cases, the mystery which surrounds the company has been of assistance to the parties who are marking up the price of the stock. Southern Pacific naturally shared in the improvement, and as the week advanced various standard stocks were more or less favorably influenced, St. Paul, Pennsylvania, Reading and others of their class joining in the movement. In the early portion of the week the Atchison shares were adversely affected by the announcement that an issue of $26,000,000 5 per cent. convertible bonds had been decided upon by the management, the stockholders having been given the right to subscribe for the same at par. The fact that the old 4 per cent. convertibles promptly sold off on this announcement was not at all strange, while the accompanying weakness of Atchison stock emphasizes the disrelish with which the financial public at present regards all new bond or stock issues.

Little attention was paid to the exceedingly good statement of the United States Steel Corporation's earnings for the March quarter, while the absence of any change in the dividend upon Steel common created no disappointment, it being fully expected that a conservative policy would be adhered to. The Steel stocks, however, developed some strength in sympathy with the action of the general market, and it was also noted that various other industrials were strong in an irregular fashion. In some quarters there is, in fact, an impression that this division of the list is destined to gain in favor, and may, in fact, become the object of considerable bullish activity. The copper stocks have been a decided feature, owing to the sharp advance in the London metal market, referred to in detail elsewhere. Amalgamated Copper and Anaconda have both shown considerable strength, with not a little activity, and American Smelting was also favorably influenced, there being, moreover, an increase of interest in the various copper stocks traded in on the curb market. One of the developments of the week was a formal announcement that the firm of Charles G. Gates & Co., which has been very prominent for several years in speculative movements, is to dissolve on June 5, coupled with the statement that its principal member, Mr. John W. Gates, purposes to retire permanently from stock market activity.

Boston Stock Market.

Prices of principal stocks, with volume of transactions, on the Boston Stock Exchange, have been as follows:

Statistical Situation of Cotton.

The aggregate world's visible supply of American and other cotton last week, as made up by the New Orleans Cotton Exchange, is shown, with comparisons:

Week ending	*April 26,* 1907	*Apr. 19,* 1907	*April 27,* 1906
American	3,496,628	3,603,545	2,769,494
Other kinds	1,442,000	1,430,000	1,590,000
Total	4,938,628	5,033,545	4,359,494

Of the world's visible supply, as above, there were afloat for or held in various countries on the dates given the following quantities:

	April 26, 1907	*Apr. 19,* 1907	*April 27,* 1906
Great Britain and continent	2,912,000	2,948,000	2,139,000
Egypt	174,000	181,000	138,000
India	818,000	771,000	1,065,000
United States	1,035,000	1,134,000	1,017,000
Total	4,939,000	5,034,000	4,359,000

Following will be found the movement of cotton into sight for the week and season, as compiled by the New York Cotton Exchange:

	This week	*Last week*	*Last year*
Week	95,169	104,031	118,230
Season	12,664,679	12,569,510	10,062,034

Boston Shoe and Leather Market.

There has been a seasonable amount of sales of hemlock and union sole leathers. Prices remain firm. Tanners of union sole leather are now producing only one-fourth to one-half normal capacity, taking this season to make repairs and alterations, as well as to prevent any accumulation of stock. Grain leather is in more inquiry, as several large manufacturers have not yet placed their orders. Finished calfskins are selling better; patent leather is quiet by comparison. Hides are firmer. Ohio buffs are quoted at 10½ to 11½ cents, showing an upward tendency. Southern hides are receiving more attention. Foreign hides are relatively too high for American markets, and little buying is reported. A fair amount of mail orders serve to keep footwear factories fairly active, but, on the whole, the season is not up to expectations and wholesalers are not placing their fall orders so freely as hoped. The aggregate amount of business is, however, of normal volume. The *Shoe and Leather Reporter's* figures this week are as follows: Last week, 95,599 cases; preceding week, 91,824; last year, 93,765; total for 1907, 1,611,227; total for 1906, 1,657,645; decrease, 46,418.

Boston Wool Market.

Weak opening in London affected the local market, low foreign crossbreds and domestic quarter blood fleeces showing considerable weakness. Before the opening of the London sales the leading interest is said to have offered 30 cents for all remaining stocks of quarter bloods here, but the offer was refused. Information as to whether this offer has been renewed is lacking. Low wools of all kinds are a drug on the market, owing to the dull market for tops in England and to the large supply and the heavy condition of the New Zealand crossbreds. Sales are very small, including scoured clothing at 68 cents for fine and 64@65 cents for fine medium; fall Texas at 21 cents; new Arizona wools, which are bright and of light shrinkage, at 23½ @24½ cents for fine and fine medium and 26@26½ cents for half and three-eighths blood, and small lots of fine merino foreign wools. Buyers and sellers are still far apart in the west. In Texas few sales have been made and some wools have been consigned. Shearing is going on in California, with sales of middle counties at 18@20 cents. The early-shorn Nevada wools are selling at 16½ @18 cents, costing 65 cents laid down in Boston. In Utah and Wyoming wool is accumulating, with bids several cents below growers' asking prices, some wools from the former state having already reached Boston. The London sales opened Tuesday about as expected, fine wools holding on a parity with the previous sales, while crossbreds were 5@10 per cent. lower.

THE WORLD'S WHEAT CROP.

The Department of Agriculture places the wheat crop of the world for 1906 at 3,423,704,000 bushels, a gain of 3.2 per cent. over 1905, when the yield was 3,316,125,000 bushels. This table gives the details by sections for a period of three years, three figures being omitted:

South Australia	20,779	12,454	13,626
Western Australia	2,381	2,077	1,935
Tasmania	801	818	792
Total Commonwealth	70,681	56,215	76,488
New Zealand	7,013	9,411	8,140
Total Australasia	77,694	65,626	84,628
Grand total, bushels	3,423,704	3,316,125	3,147,627

The aggregate wheat yield of the world for each year since complete statistics were first compiled by our Agricultural Department is appended:

	Bushels		*Bushels*
1906	3,423,704,000	1898	2,942,439,000
1905	3,337,748,000	1897	2,234,461,000
1904	3,163,845,000	1896	2,506,320,000
1903	3,221,251,000	1895	2,593,312,000
1902	3,125,227,000	1894	2,660,557,000
1901	2,954,763,000	1893	2,559,174,000
1900	2,640,620,000	1892	2,481,805,000
1899	2,783,880,000	1891	2,432,322,000

The average annual product for the fifteen years, 1891 to 1905 inclusive, was 2,974,110,000 bushels. The 1906 crop, therefore, shows a gain over that average of 449,594,000 bushels, or 15 per cent., and compared with 1905 the increase is 45,956,000 bushels, or only a little over 1¼ per cent.

AMERICAN PROGRESS IN FORTY-TWO YEARS.

C. M. Harvey writes in the April *Munsey's:*

"In forty-two years passed, New York, Ohio and Indiana have doubled in population; Massachusetts, New Jersey and Pennsylvania have more than doubled, and Illinois, Michigan and Wisconsin have nearly trebled. Chicago, from about the fiftieth of the world's cities, has become the fifth or fourth; New York has become the world's second city in inhabitants, perhaps its first in wealth. Pennsylvania produces eleven times as much coal in 1907 as the United States did in 1865.

"Below the Potomac our progress has been even more rapid. While the south had to go to the north or New England for all its cotton goods before 1865, it is now using 2,400,000 bales of cotton in its mills, or as much as the north. Nearness to raw material, and cheapness of land, labor and rents, will ultimately give the south almost as much of a monopoly in cotton manufacturing as in cotton growing. Birmingham, Ala., may beat Pittsburgh before another forty-two years pass. The south's $18,000,000,000 of wealth in 1907 is $2,000,000,000 greater than that of the entire United States at the time of the civil war.

"On the day in 1865 when Oakes Ames's and C. P. Huntington's track layers were starting out on their continent-spanning work, there were 35,000 miles of railway main track in the United States; there are now 225,000. The 1,500,000 men whom the railways employ are more than the armies commanded by all the union and confederate commanders at Lee's surrender.

"The 1907 revenue of the railroads—$2,400,000,000—would pay the government debt twice over and support the government for a year. The property of the American railroads ($16,000,000,000) is as great as the wealth of the country at Lincoln's election. Between 1865 and 1907, inclusive, pig-iron production jumped from 832,000 tons to 27,000,000 tons; the coal output from 10,000,000 to 400,000,000 tons; aggregate mineral output expanded meanwhile from $1,000,000,000 to $2,000,000,000; products of manufacturers from $2,000,000,000 to $17,000,000,000; value of farms and farm property of all sorts from $7,000,000,000 to $30,000,000,000; farm products from $1,000,000,000 to $7,000,000,000, and the country's wealth from $20,000,000,000 to $118,000,000,000. The value of farms and farm property to-day equals the value of all the country's property in 1870.

"In the four and one-fifth decades population has multiplied two and a half times; value of farms and farm property has multiplied by more than four; farm products by seven; wealth by nearly six; manufactured products by eight and a half; mineral products by thirteen; pig iron by thirty-three, and coal by forty. The people's savings banks deposits, which were $200,000,000 in 1865, have swelled to $3,400,000,000, multiplying seventeen times; meanwhile the government debt has been reduced from $2,200,000,000 to $900,000,000, or from $65 to $11 per capita."

UNITED STATES AND WORLD'S TRADE.

The international commerce of the world now exceeds $26,000,000,000, of which $13,750,000,000 is imports and $12,500,000,000 exports. Of the imports of countries other than the United States, 14½ per cent. are drawn from this country, and of their exports, 9½ per cent. are sent to us.

The total value of the imports of all the countries for which statistics are available is set down at $13,739,697,000, and the total value of their exports is set down at $12,496,419,000, these figures of exports including only the domestic products exported and not including the foreign or colonial merchandise brought into the country and reëxported. The total imports of the countries other than the United States are given at $12,513,143,000 and the share of these imports drawn from the United States at $1,798,338,000, or 14.37 per cent. of the total. The total exports of the countries other than the United States are given at $10,778,466,000 and the share sent to the United States at $1,031,113,000, or 9.57 per cent. of the total.

The share which the United States supplies of the imports of the various countries of the world and which it takes of their exports is shown by an examination of the details, and this examination discloses some interesting facts. The country which draws the largest share of its imports from the United States is Honduras, which in 1905 took 73.7 per cent. of its imports from this country. Next in rank in this particular is Santo Domingo, of whose imports in 1905 71.65 per cent. were from the United States. Mexico in the same year took 65.99 per cent. of its imports from the United States; Canada, 59.59 per cent.; Nicaragua, 52.09

per cent.; Costa Rica, 51.65 per cent.; Cuba, 45.34 per cent.; Guatemala, 39.55 per cent.; Haiti, 35.56 per cent.; Colombia, 34.15 per cent.; Salvador, 31.18 per cent.; Venezuela, 30.22 per cent.; Ecuador, 28.86 per cent.; Japan, 21.35 per cent.; United Kingdom, 20.45 per cent.; Peru, 17.98 per cent.; the Philippines, 16.8 per cent.; China, 16.68 per cent.; Denmark, 16.08 per cent.; Argentina, 14.1 per cent.; Germany, 13.91 per cent.; Italy, 12.48 per cent.; the Commonwealth of Australia, 11.7 per cent.; New Zealand, 11.21 per cent.; Spain, 11.21 per cent.; France, 10.72 per cent.; Brazil, 10.33 per cent.; Chile, 9.92 per cent.; Uruguay, 9.67 per cent.; Russia, 9.66 per cent.; Austria-Hungary, 9.49 per cent.; Netherlands, 9.38 per cent.; Bolivia, 8.45 per cent.; Belgium, 7.98 per cent.; Sweden, 7.22 per cent.; Portugal, 7.13 per cent., and Corea, 6.19 per cent.

Considering the share of the exports of the various countries sent to the United States in the order of the relative share, the table shows that Cuba sends to the United States 86.53 per cent. of its total exports; Mexico, 68.60 per cent.; Santo Domingo, 65.16 per cent.; Colombia, 54.01 per cent.; Nicaragua, 53.21 per cent.; Costa Rica, 47.14 per cent.; the Philippines, 36.28 per cent.; Venezuela, 31.11 per cent.; Canada, 30.41 per cent.; Guatemala, 34.9 per cent.; Japan, 29.48 per cent.; Ecuador, 27.32 per cent.; Salvador, 21.72 per cent; Chile, 15.2 per cent.; Switzerland, 12.90 per cent.; Italy, 11.95 per cent.; China, 11.86 per cent.; Germany, 9.46 per cent.; Peru, 9.34 per cent.; Haiti, 8.84 per cent., and the United Kingdom, 7.25 per cent.

ARTIFICIAL SILK.

Special Agent William Whittam, Jr., furnishes the following interesting report on the manufacture of artificial silk in England:

"The process of manufacturing artificial silk made from wood pulp is one which, in Europe, is jealously guarded from inspection. The product is intended to supply the trade with a yarn which will take the place of the product of the silkworm. It is recognized, however, even by the makers of the imitation silk, that its use has limitations. Its fabrication into cloth without the admixture of other fibers is not recommended, but rather distinctly discouraged by at least one 'mock' silk spinner. On the other hand, it is coming into popularity as the material for both transverse and longitudinal stripes and small figured effects in cloths, the body of which is composed of either cotton, wool or worsted.

"Obviously, the aim of the inventors of the several processes is to produce a thread resembling real silk as closely as possible in appearance, feel, and wearing qualities. Up to the present a product possessing the two first-named characteristics, but deficient in the latter attribute, seems to have been arrived at. Naturally, then, the price at which the artificial yarn can be marketed must be less than that which the real and well-established silk commands. At this time imitation silk sells for considerably less than real silk, but at a higher price than mercerized cotton, and the exploiters of the patent processes are looking forward to the time when their yarns will have a settled position in the textile trade between silk and the best qualities of mercerized cotton yarns.

"Two processes are employed—one in which alcohol is used as dissolving agent of the wood pulp, while in the other process a caustic solution is employed. It is with the caustic or 'viscose' process I shall deal in this report. I am told that the United States is the best market for these yarns, and as the trade is as yet in its infancy we have an opening for the establishment of a new industry. So far as I have been able to find, there is but little of this stuff made in America, and as the base patents have not long to run, the industry should at least compel the investigation of the users at home.

"The raw material comes from Norway in the form of baled sheets, each sheet being about four feet square. Its price fluctuates from time to time, but 4 pence (8 cents) a pound may be taken as the average cost. After the pulp has been dissolved into a liquid of the required consistency it is forced through a series of microscopic holes, four one-thousandths of an inch in diameter, punched through a thin platinum plate. A 'setting' bath (acid) then fixes the filaments so that they can be twisted together to form a workable thread. Usually either sixteen or thirty-two of these capillary filaments go to form what may be termed the 'single' yarn. The spinning spindle, which is a weighty affair of some ninety ounces, is gear-driven at 5,000 revolutions a minute, and carries a 'cup' into which the yarn is collected in the form of a small 'cheese.' There will shortly be introduced an improved spindle weighing but thirty ounces, which it is expected can be successfully driven at the rate of 9,000 revolutions per minute. A later arrangement for feeding the 'viscose' through the microscopic holes enables a varying pressure to be exerted on the liquid, and by this contrivance different counts of yarn can be made than could be conveniently produced by the older arrangement of increasing or decreasing the number of component filaments in the finished thread.

"Aside from the apparatus for treating the pulp prior to spinning, the spinning machines are in themselves costly, the present price per spindle being $25, the average production per spindle being 100 meters per minute of a thread having two and a half turns of twist to the inch. I learn that, so far as British experience is concerned, the development of the work has been most expensive. Starting with the accumulated knowledge of the continental producers has not prevented comparatively enormous sums being expended in simplifying complicated, though somewhat crude, mechanism and simplifying chemical processes and standardizing the quantities and qualities of the ingredients employed.

"The single yarn, bleached and dyed, is put up in three qualities, A, B and C, and is sold in the hank at $1.20, $1.32 and $1.44 per pound, the cost to the manufacturer of the artificial yarn averaging 75 cents per pound. I inquired as to the division of cost and was told that one-third went for raw material and chemicals, one-third for labor, supplies, power, etc., and that one-third covered interest, depreciation, selling and other general expenses.

"Before the true intrinsic value of artificial silk as a textile material can be arrived at, any disadvantage it has must be known. It is much heavier than real silk, and therefore more pounds will be needed to supply any given length. It is more or less seriously affected by water and moisture and is very inflammable, and both the strength and elasticity of the material falls far below that of the real article. At the same time its brilliancy and luster is superior to mercerized cotton. With all its comparatively weak characteristics, I suggest that it will ultimately compete with cotton and with silk yarns made from waste silk, if its use is confined to the mixture with other textiles in the manner I have indicated."

Communications regarding editorial matters should be addressed to the Editor; all others to the Publishers.

ENTERED AT THE POST OFFICE AT NEW YORK, N. Y., AS SECOND-CLASS MATTER.

SATURDAY, MAY 11, 1907.

A fortnight ago we pointed out that the situation in the labor world was an unusually quiet one for a May 1 period, but at the same time we suggested that affairs in this respect were so mutable in character that a change might be looked for at any time. As it is, the trend of recent events has developed rather unfavorable aspects so far as labor matters in two cities—New York and San Francisco—are concerned, while some other cities are similarly involved, though to a much smaller extent. In the metropolis and districts adjacent thereto upward of 10,000 longshoremen have struck for higher wages, which some of the coastwise steamship lines have seen fit to grant, but the greater number steadfastly refuse to increase the wage schedule, alleging that the cost of doing business in the port of New York is already so high that additional compensation for employees would not be feasible. Some disorder has occurred, and conflicts between the strikers or their sympathizers and the peace authorities are frequent, while many outward-bound steamships have been compelled to depart with comparatively light cargoes, and in some instances with inward bound cargoes practically unbroken, but nevertheless the vessels operated by the various lines are leaving on time. Strike breakers have been employed in large numbers, and with these the companies hope to soon be in a position to restore normal conditions on the piers. As matters stand, business interests in general are affected more or less, owing to the fact that the unloading of incoming vessels, as well as the loading of outgoing steamships, is performed under difficulties. Moreover, if the strike is prolonged, the foreign trade of the port will be injured; in fact, late reports indicate that some of the steamship lines, those favored by a heavy passenger traffic, may abandon freight business for the present, or endeavor to divert cargoes to other domestic ports. In San Francisco the ordinary daily routine of the city is hampered by strikes of street-car employees, telephone operators, ironworkers and others, all of whom seek higher wages. The employment of "strike breakers" has aroused the ire of the strikers, as a result of which conflicts between the police and the disorderly element in are of common occurrence.

The new treaty between the United States and Santo Domingo was ratified by the Senate at Washington a few days before the end of February, and it was expected that it would be ratified by the Congress of the latter republic at once. It was only on Monday of this week, however, that news was received by cable of its ratification. It is believed at the State Department that the treaty has been adopted without any change in the text. At the same time it is understood that while it ratified the convention as it stood, the Dominican Congress adopted certain "explanations," or resolutions, containing expressions of opinion, of which the precise tenor is not yet known. The treaty provides substantially for the continuance of the plan under which the revenues of the islands have been collected by American agents under the protection of the United States, and a portion of the receipts segregated and applied to securing the foreign creditors of the Dominican republic. The plan has been in operation under a modus vivendi for a little over two years, and has apparently given satisfaction.

The bad crop and weather reports received during April prepared the way for a less satisfactory government report on winter wheat than was issued a year ago. That made by the Department of Agriculture yesterday shows a condition as of May 1 of only 82.9 per cent., as against a condition of 89.9 per cent. on April 1, 94.1 on December 1, 1906, and 90.9 on May 1, 1906. In addition to the lower condition shown, it is also noted that the area abandoned between December 1 and May 1, 1907, was 3,533,000 acres, as against only 1,717,000 acres in the same period of the preceding year, 1,432,000 acres in 1905 and the record abandonment of 4,932,000 acres in 1904. There still remained an area of 28,132,000 acres in winter wheat on May 1, 1907, as against 29,623,000 acres on May 1, 1906, and the record area of winter wheat reported on May 1, 1903, of 32,510,510 acres. The above condition figures are construed to point to a quantitative estimate of 405,000,000 bushels of wheat, as against a quantitative estimate made a year ago at this time of 453,000,000 bushels and an actual outturn of 493,000,000 bushels at harvest. Other quantitative estimates, however, run down to a little below 400,000,000 bushels. At best, however, the reduction of 88,000,000 bushels in possible yield from last year's actual crop would seem to give a fair basis for the advance of 4 cents per bushel shown this week, and likewise for the advance of 10 cents per bushel in the past month. Present wheat prices, it might be added, are only slightly above last year, a circumstance which would point to room still existing for a further discounting of the reduced yields indicated in this country and Europe, as compared with a year ago.

Scarcely had an accommodation been arrived at by the lately warring republics of Nicaragua, Salvador and Honduras when complications arose between another of the Central American republics and the great Latin-American country to the north. The trouble grew out of the demand made by the government of Mexico for the extradition of the Guatemalan general, Lima, who was charged with complicity in the assassination in the City of Mexico of General Barillas, a former president of Guatemala. This demand was refused by the government of the latter republic. It was at one time thought that war would result from the refusal, and, indeed, the Mexican government decided to give the Guatemalan minister his passports. It was announced a few days ago, however, by Señor Mariscal, the Mexican minister of foreign relations, that his government would not go to war over the matter, though he added that any overt act on the part of the Central American republic would completely change the attitude of the Mexican government. In the meantime Mexican troops are being sent to the Guatemalan frontier.

Diplomacy has of late been active in relation to affairs in the Far East. Negotiations are now in progress between France and Japan looking to an understanding between the two powers regarding their respective interests in that part of the world. The former country has Asiatic interests growing out of its possessions in India and Indo-China, and it is anxious to safeguard its commercial interests there in the event of war. It was at first declared that the proposed agreement between France and Japan was strictly limited to the maintenance of the status quo, which involved a recognition of the claims of the latter in Korea and Formosa, and did not touch Chinese interests. M. Kurino, the Japanese minister at Paris, is, however, quoted as saying that the convention contained a clause guaranteeing the independence and integrity of China. This agreement will, if adopted, form one in a chain of agreements which involve a comprehensive understanding regarding affairs in the Far East between Great Britian, Russia, France and Japan.

No internal question has vexed the legislators of the United Kingdom more during the last century or so than that touching the government of Ireland. The question reached an acute phase between two and three decades ago, when it was potent in determining the fate of ministries. An attempt at a solution has been offered by the present Liberal administration this week. On Tuesday the Chief Secretary for Ireland, Mr. Augustine Birrell, presented the government's bill. This measure provides for the establishment of a representative administrative council, consisting of eighty-two elected and twenty-four appointed members, the latter to be nominated the first year by the King and thereafter by the Lord Lieutenant for Ireland. The elected members are to be chosen in accordance with the local government board franchise. The president of the council is to be elected by that body itself. The council is to have control of eight departments. The Lord Lieutenant is given the power to reserve his consent to any resolution of the council, or any of the departments subject to its control—in other words, he has a veto power over their acts.

No little uneasiness has been created by the outbreak of rioting in British India, particularly in the vicinity of Lahore, in the Punjab. This rioting seems to be the culmination of a quite widespread agitation, of which indications have heretofore appeared, and which has been fostered by inflammatory addresses by Hindu leaders. The attacks on mission buildings at Rawalpindi and Amritzar seem to indicate that the agitation has a religious as well as a political side, and not the least interesting feature of the situation is that the schools and colleges, particularly in Bengal, at a long distance from Lahore, have become hotbeds of unrest. The circumstance that the recent outbreaks occurred at a time so near the anniversary of the outbreak of the great mutiny has led the authorities to take energetic measures at once to repress the agitation and to guard against surprise. The chief inspirer of the present movement, Lala Lajpat Rai, has been arrested, and heavy reinforcements have been sent to Lahore. For the moment, at any rate, the outbreak in the Punjab has been checked by the government's action, though accounts come to hand of disturbances at places in eastern Bengal, which are a thousand miles or more from Lahore. It may not be without interest to recall that the outbreak of the great mutiny, which it took many months and much bloodshed to suppress, occurred at Meerut just a half century ago yesterday.

PRICES ABOUT STEADY.

Many cross currents are visible in the commodity price movement, conflicting up-and-down tendencies in kindred classes of products resulting in a very slight change in the general level of all values as indicated by BRADSTREET'S approximate index number. Taken as a whole, the movement in April showed a very slight reduction, but prices generally may be said to be about steady at the decline shown on April 1. To illustrate the character of the movement it is to be noted that four classes of products show gains on May 1 as compared with April 1 this year, while six are lower and three classes are unchanged. The groups advancing are breadstuffs, fresh and dried fruits, metals and oils. Those declining include live stock, provisions and groceries, textiles, hides and leather, naval stores and miscellaneous products, while those unchanged include coal and coke, building materials and chemicals and drugs.

The most notable price-making features of the month were the bad crop and weather reports, which were responsible for advancing prices of most cereals, vegetables, cotton, cotton-seed oil and oils. Active demand for manufactured products was instrumental in helping iron and steel and other metals. Building activity is reflected in gains in some building materials, but the larger number were unchanged during the month. Hog products showed easing, as did some kinds of leather. In all twenty-eight products advanced, while twenty-three declined, and fifty-five, more than half of all included, remained unchanged.

The net result of the various movements during the month is best illustrated by the following table giving the index numbers (totals of prices per pound) at different dates by groups of commodities:

	July 1, 1896	*Feb.* 1, 1900	*May* 1, 1906	*Apr.* 1, 1907	*May* 1, 1907
Breadstuffs	$0.0524	$0.0658	$0.0805	$0.0825	$0.0856
Live stock	.1855	.2500	.3125	.3315	.3265
Provisions	1.3619	1.8033	1.8181	1.9801	1.9414
Fruits	.1210	.1472	.1574	.2057	.2104
Hides and leather.	.8250	1.1725	1.1625	1.1800	1.1750
Textiles	1.5799	2.5065	2.5468	2.7431	2.7378
Metals	.3757	.6148	.7383	.8290	.8543
Coal and coke	.0048	.0067	.0073	.0074	.0074
Oils	.2082	.3284	.3087	.3518	.3663
Naval stores	.0402	.0807	.1032	.1110	.1058
Building materials	.0716	.0973	.0899	.0894	.0894
Chem. and drugs	.0607	.0960	.7017	.7083	.7083
Miscellaneous	.2150	.2315	.2785	.2542	.2442
Total	5.7019	8.2307	8.3054	8.8740	8.8556

Fluctuations in the index number in the past fifteen years are shown in the following table, which gives the respective swings from high to low and the reverse thereof, as noted by BRADSTREET'S approximate index number:

Jan. 1, 1892	$8.1382	Nov. 1, 1905	$8.2097
July 1, 1896	5.7019	Dec. 1, 1905	8.3014
Jan. 1, 1897	6.1164	Jan. 1, 1906	8.3289
July 1, 1897	5.8537	Feb. 1, 1906	8.2415
Feb. 1, 1900	8.2307	Mar. 1, 1906	8.2321
June 1, 1901	7.4181	April 1, 1906	8.2987
Dec. 1, 1902	8.1413	May 1, 1906	8.3054
Aug. 1, 1903	7.7473	June 1, 1906	8.3203
Feb. 1, 1904	8.0973	July 1, 1906	8.2835
July 1, 1904	7.6318	Aug. 1, 1906	8.3379
Jan. 1, 1905	8.0827	Sept. 1, 1906	8.4528
Feb. 1, 1905	8.0805	Oct. 1, 1906	8.5580
Mar. 1, 1905	8.0976	Nov. 1, 1906	8.7509
April 1, 1905	7.9996	Dec. 1, 1906	8.9023
May 1, 1905	7.9700	Jan. 1, 1907	8.9172
June 1, 1905	7.9073	Feb. 1, 1907	8.9953
July 1, 1905	7.9160	Mar. 1, 1907	9.0393
Aug. 1, 1905	8.1111	April 1, 1907	8.8740
Sept. 1, 1905	8.2795	May 1, 1907	8.8556
Oct. 1, 1905	8.2298		

The total index number on May 1, it will be seen, was $8.8556, which was a very small fraction of 1 per cent. decline from April 1, and a decrease of 2 per cent. from the high point touched on March 1, 1907. Compared with a year ago a gain of 6.6 per cent. is shown, while compared with February 1, 1900, a gain of only 7.5 per cent. is shown. Compared with the low-water mark on July 1, 1896, a gain of 55.3 per cent. is shown, while compared with January 1, 1892, a gain of 8.8 per cent. is seen. Following will be found the movement of prices during April:

MAY 1, 1907, COMPARED WITH APRIL 1, 1907:

INCREASES.

Wheat	Sugar	Steel billets
Corn	Potatoes	Tin
Oats	Apples	Anthracite coal
Barley	Cranberries	Bituminous coal
Flour	Peanuts	Cotton-seed oil
Sheep, live	Lemons	Olive oil
Beef, carcasses	Cotton	Rosin
Hogs, carcasses	Silk	Brick
Mutton, carcasses	Pig iron, Bessemer	Spruce timber
Eggs		

DECREASES.

Beeves, live	Mackerel	Pig iron, southern
Hogs, live	Coffee	Cotton sheetings, southern
Milk	Beans	Connellsville coke
Beef, family	Peas	Turpentine
Pork	Currants	Lime
Bacon	Hemlock leather	Quinine
Lard	Hemp	Hops
Butter	Jute	

UNCHANGED.

Rye	Ginghams	Yellow pine
Horses	Iron ore	Hemlock timber
Bread	Pig iron, eastern	Alum
Hams	Steel rails	Bicarbonate soda
Cheese	Tinplates	Borax
Codfish	Steel beams	Carbolic acid
Tea	Silver	Caustic soda
Molasses	Copper	Nitric acid
Salt	Lead	Sulphuric acid
Rice	Quicksilver	Phosphate rock
Raisins	Southern coke	Alcohol
Hides	Petroleum, crude	Opium
Union leather	Petroleum, refined	Rubber
Oak leather	Linseed oil	Tobacco
Wool, O. and Pa.	Castor oil	Paper
Wool, Australian	Tar	Ground bone
Flax	Nails	Hay
Print cloths	Glass	Cotton seed
Standard sheetings		

Compared with May 1 a year ago the following changes are found:

MAY 1, 1907, COMPARED WITH MAY 1, 1906.

INCREASES.

Corn	Peanuts	Copper
Oats	Lemons	Lead
Barley	Raisins	Tin
Beeves, live	Currants	Southern coke
Sheep, live	Oak leather	Petroleum, refined
Hogs, live	Jute	Petroleum, crude
Horses	Silk	Cotton-seed oil
Beef, carcasses	Flax	Castor oil

Tea	Hemlock timber	Phosphate rock
Hemlock leather	Alum	Quinine
Union leather	Bicarbonate soda	

Fifty-eight products are higher, while twenty-four are lower and twenty-three are unchanged.

THE TARIFF AGREEMENT WITH GERMANY.

The State Department has made public the text of the commercial agreement between the United States and Germany. In the preamble it is declared that it is desired to adjust the commercial relations between the two countries until a comprehensive commercial treaty can be agreed upon. Under the authority conferred on the President by section 3 of the Dingley Tariff act, it is agreed on the part of the United States that the following articles shall be subject to the reduced tariff rates provided by that section as follows:

Argols, or crude tartar, or wine lees, crude, 5 per cent. ad valorem.

Brandies, or other spirits manufactured or distilled from grain or other materials, $1.75 a proof gallon.

Champagne and all other sparkling wines, in bottles containing not more than one quart and more than one pint, $6 a dozen; containing not more than one pint each and more than one-half pint, $3 a dozen; containing one-half pint each or less, $1.50 a dozen; in bottles or other vessels containing more than one quart each, in addition to $6 a dozen bottles on the quantities in excess of one quart, at the rate of $1.90 a gallon.

Still wines and vermouth, in casks, 35 cents a gallon; in bottles or jugs, per case of one dozen bottles, or jugs containing each not more than one quart and more than one pint, or twenty-four bottles or jugs containing not more than one pint, $1.25 a case. Any excess beyond these quantities found in such bottles or jugs shall be subject to a duty of 4 cents a pint or fractional part thereof, but no separate or additional duty shall be assessed upon the bottles or jugs.

Paintings in oil or water colors, pastels, pen and ink drawings and statuary, 15 per cent. ad valorem.

It is further agreed on the part of the United States that certain modifications set forth in an annexed note and made a part of the consideration of the agreement shall go into effect as soon as possible, and not later than the date when the agreement shall be put in force.

Reciprocally the German government concedes to the products of the soil and industry of the United States enumerated in an attached list the duties levied under the German minimum tariff. The rates imposed on the principal articles under this tariff are as follows, per hundred kilos, except where otherwise indicated:

Rye, 5 marks; wheat and spelt, 5½ marks; malting barley, 4 marks; other barley, 1 3-10 marks; oats, 5 marks; Indian corn, 3 marks; rice, not cleaned, 4 marks; beans, 2 marks; fresh oranges, 3¾ marks; sawed lumber, not planed, hard, 5.76 marks per cubic meter; same, soft, 4 32 marks per cubic meter; wooden paving blocks, hard, 5.76 marks per cubic meter; same, soft, 4.32 marks; wood for casks, oak, 1.60 marks per cubic meter; same, other hard wood, 2.40 marks; same of soft wood, 1.80 marks.

Sheep, 8 marks; hogs, 9 marks; fowls (except geese), 4 marks; fish or chilled meats, 27 marks; frozen, 35 marks. Hogs, cut up, not frozen, including the bacon adhering thereto, are dutiable at the conventional rate of 27 marks; prepared meats, 35 marks; simply prepared for table, 75 marks.

The following rates are also provided in this tariff, namely:

Petroleum, 5 marks; wine and fresh must of grapes, in casks of an alcoholic strength of not more than 14 per cent., by weight, 20 marks; saddlers' and trunkmakers' wares, 50 marks; glove leather, 1.25 marks; India rubber tires, 60 marks; plate and sheet glass, 3 marks; steam engines, from 3.50 to 11 marks, according to weight; motor cycles, from 70 to 100 marks, according to weight; carriages and vehicles, from 600 to 150 marks, according to weight; small arms, except military arms, 60 marks; watches, from 40 to 80 marks; pipe organs, 20 marks.

It is understood that the list comprises about 97½ per cent. of the total imports from the United States into Germany. The provisions of the agreement are to apply not only to products imported directly from the country of one of the contracting parties into that of the other, but also to products which are imported into the respective countries through a third country, so long as such products have not been subject to any further processes of manufacture in that country, and are to apply also to countries or territories which are now or may in the future constitute a part of the customs territory of either contracting party.

Several important modifications of the administrative regulations are embodied in instructions to be issued to the customs and consular officers of the United States and to remain in force during the continuance of the agreement. In the first place, it is provided that market value, as defined by section 19 of the Customs Administrative act, shall be construed to mean the export price whenever goods, wares and merchandise sold wholly for export, or sold in the home market only in limited quantities, by reason of which facts there cannot be established a market value based upon the sale of such goods, wares and merchandise, in usual wholesale quantities, packed ready for shipment to the United States. Statements required by section 8 of the Customs Administrative act are not to be required by consular officers except upon the request of the appraiser of the port after entry of the goods. In reappraisement cases the hearings are to be open and in the presence of the importers or their attorneys, unless the board of appraisers shall certify to the Secretary of the Treasury that the public interest will suffer thereby. In the latter case, however, the importer will be furnished with a summary of the facts developed at the closed hearing upon which the reappraisement is based. Personal appearance before consular officers is to be demanded only in exceptional cases where special reasons require a personal explanation. Original bills are only to be requested in cases where invoices presented to the consular officer for authentication include goods of various kinds that have been purchased from different manufacturers at places more or less remote from the consulate, and these bills are to be returned after inspection by the consular officer. The declaration of the name of the ship in the invoice is to be dispensed with whenever the exporter, at the time the invoice is presented for authentication, is unable to name the ship. Special agents, confidential agents, and others sent by the Treasury Department to investigate questions bearing on customs administration are to be accredited to the German government through the Department of State at Washington and the Foreign Office at Berlin, and such agents are to coöperate with the several chambers of commerce located in the territory apportioned to such agents, and the general principal as to personæ gratæ is to apply to these officials. Finally, the certificates as to value issued by German chambers of commerce are to be accepted by appraisers as competent evidence, and are to be considered by them in connection with such other evidence as may be adduced.

The agreement is to take effect on July 1 of this year, and to remain in force until June 30, 1908. In case, however, neither country shall have given notice six months before the latter date of its intention to terminate the agreement it will remain in force until six months from the date when either shall notify the other of its intention to terminate the same.

GOLD EXPORTING POSSIBILITIES.

Developments in connection with the international money markets continue to excite a good deal of interest. While their latest phases do not indicate that renewed pressure or stringency need be apprehended, there appears to be a lessening of the belief, which was becoming pretty general both in this country and abroad,

that the monetary position had been so strengthened that a period of low rates of interest could be reckoned upon with more or less confidence. During the present week there has been a firmer tone in the New York loan market. This was not displayed so much in relation to rates for call loans, which merely advanced from around 2¼ per cent. to 2¾ per cent., as it was in the steady tone which asserted itself in connection with loans on time, lenders showing great reluctance to accept the rates which have been recently quoted for that species of accommodation. In fact, some prominent institutions are understood to have virtually gone out of the market for the time being, and although stock-market borrowers are not at all eager to effect time arrangements while they can provide themselves with call money on comparatively easy terms, there is, nevertheless, a good inquiry in Wall Street for money until after the first of January, 1908, indicating that there is a feeling that money will be dearer in the last half of this year, and 5 to 5¼ per cent. is paid for accommodation of that nature.

Among the influences which have tended to cause this firmer tone in the New York market the commencement of the usual flow of funds to the Pacific coast for the movement of the fruit crop may be counted, some $1,500,000 having been transferred to San Francisco this week. This, however, would on the whole hardly explain the way the loan market is acting, and a reason apparently of a more cogent nature may be found in the discussion which has sprung up about the possibility of the New York market having to ship a considerable amount of gold to Paris. At the beginning of the week there seemed, indeed, to be every prospect that such a movement was about to set in. It was urged that as the Bank of France has called on the Bank of England for the £3,000,000 specie, which was loaned to the British money market last winter, it would be natural and feasible for London to draw the gold from New York. With demand sterling exhibiting, as it did, a further and decided degree of strength, and with Paris exchange on London also working toward a level which would facilitate operations of the kind just referred to, it was felt that gold would in all likelihood be shipped from New York, some estimates of the probable extent of the movement being as high as $15,000,000 or more.

Immediate danger of this kind was, however, averted after the beginning of the week by the hardening of the money market at New York already referred to, it being to a considerable extent an automatic reply to the prospective loss of specie. At the same time the loan market was somewhat affected by a report that the Secretary of the Treasury might reduce the government deposits in the national banks. This was, however, denied, though the street and the money market appear to have gained an impression that if gold were to go out from this country to any large amount the Secretary would no doubt take some action calculated to make the operations more difficult and costly. As it is, the prospect for some gold shipments is still a fair one, and not a little in this connection depends on whether the Bank of France will allow interest to the shippers of specie while the gold is in transit.

PROGRESS OF THE PUBLIC UTILITIES BILL.

To all appearance Governor Hughes, of New York, has scored a success as regards the disposition of the so-called public utilities bill. That measure has been amended since our last writing, but the amendments have not been all in one direction, and they have seemingly satisfied the governor, while they have secured the support of enough members of the state senate to insure the passage of the bill by that body, in which the governor's influence has not seemed to be controlling. As the result of a conference held on Wednesday evening twenty-nine Republican senators, three more than a majority of the upper house, resolved to support the bill in practically the form in which it came before them after being amended. It was further decided to request the committees having charge of the bill to report the measure as soon as possible and to have any further amendments submitted to a caucus of Republican senators. This action would seem to indicate that the measure will have the strength of the party substantially behind it, and that means its passage by both houses.

One of the amendments deals with the approval by the public service commissions of issues of stocks, bonds and other forms of indebtedness. In its modified form the bill provides that a common carrier, railroad corporation, street-railroad corporation, gas or electric corporation, may issue such obligations, payable at periods of more than twelve months, when necessary for the acquisition of property, the construction, completion, extension or improvement of its facilities, or for the improvement or maintenance of its service, or for the discharge or lawful refunding of its obligations, provided, and not otherwise, that there shall have been secured from the proper commission an order authorizing such issue and its amount, and stating that in the opinion of the commission the use of the capital to be secured is reasonably required, and that for the purpose of determining this the commission shall make such inquiry or investigation, hold such hearing and examine such witnesses as it may deem of importance in enabling it to reach a determination. It is further provided that such corporations may issue notes for proper corporate purposes, and not in violation of any provision of law, payable in less than twelve months without such consent, but that no such notes shall in whole or in part, directly or indirectly, be refunded by any issue of obligations running for more than twelve months without the consent of the proper commission.

To the sections requiring the approval of the proper commission to the assignment, transfer or lease of any franchise or rights, a clause has been added providing that such approval shall not be construed to revive or validate any lapsed or invalid franchise, or to enlarge or add to the powers and privileges contained in the grant of any franchise. The penalty for a violation of any provision of the act by a common carrier, railroad corporation, or street railroad corporation or its agents or employees, or for a failure to comply with an order made by a commission under the authority of the act is reduced from $5,000 to $1,000. In case, however, the defendant in an action to recover penalties shall prove that during any portion of the time for which they are sought to be recovered he was in good faith prosecuting a proceeding to set aside such order, the court shall remit the penalties incurred during such proceeding. The former provision, making penalties recoverable even during the pendency of such a proceeding, has been changed to meet constitutional objections.

In regard to proceedings to punish witnesses for contempt, it is now provided that if a person in attendance before a commission or a commissioner refuses without reasonable cause to be examined, or to answer a legal and pertinent question, or to produce a book or paper when ordered to do so, the commission may apply to any justice of the Supreme Court, upon proof by affidavit, for an order, returnable in not less than two nor more than five days, to show cause why he should not be committed to jail. Upon the return of the order such person shall be examined under oath by the justice, and shall be given an opportunity to be heard, and in case his refusal shall be found to have been unreasonable, he may be forthwith committed to jail, to remain until he complies with the order. The bill formerly contained a provision requiring a commission, before allowing any gas or electric corporation to begin construction or exercise rights under a franchise, to inquire into the good faith of the new corporation and the necessity for the service proposed. This provision has now been stricken out as possibly helping to secure a monopoly to existing corporations.

WHEAT SUPPLIES ON MAY 1.

Statistics of American wheat supplies show that a very moderate decrease in available stocks occurred in April, which fact is largely explained by the heavier movement of wheat from interior elevators and farms to leading points of accumulation during the month. This offset the decrease usual in available stocks in April, and coupled with a slight gain in European and afloat stocks, due to large shipments from Russia and Argentina, resulted in a net gain in the world's wheat supply on May 1 as compared with April 1. Touching the large movement from invisible points in April in this country, it might be noted that in the four weeks ending with May 4 there were received 18,000,000 bushels of wheat at interior points, as against only 7,810,000 bushels in the same period of 1906, and 7,684,000 bushels in the same period of 1905. Reflection of this much heavier movement is had in the fact that stocks of wheat in the United States alone increased 1,300,000 bushels, whereas a year ago the same stocks decreased about 5,000,000 bushels during April. The statistics of stocks held in the United States and Canada, east and west of the Rocky mountains, on May 1, 1907, compare with the same period of the three preceding years as follows:

	East of Rockies	*Pacific coast*	*Total American visible*
May 1, 1907	79,660,000	1,731,000	81,391,000
May 1, 1906	51,264,000	3,917,000	55,181,000
May 1, 1905	36,641,000	1,860,000	38,501,000
May 1, 1904	41,027,000	2,078,000	43,105,000

United States and Canadian stocks decreased 2,100,000 bushels in April, as against a decrease of 15,400,000 bushels in April a year ago and 7,900,000 bushels in 1905. All of this decrease, however, occurred in Canada, as following statistics show:

1907	*United States*	*Canada*	*Total*
January 1	59,188,000	24,049,000	83,237,000
February 1	56,403,000	25,058,000	81,461,000
March 1	53,082,000	27,292,000	80,374,000
April 1	53,112,000	30,385,000	83,497,000
May 1	54,450,000	26,941,000	81,391,000
1906			
January 1	57,672,000	19,473,000	77,145,000
February 1	58,180,000	20,266,000	78,446,000
March 1	54,051,000	21,377,000	75,428,000
April 1	49,082,000	21,482,000	70,564,000
May 1	42,878,000	12,303,000	55,181,000

The following figures show the American and European stocks of wheat on the first of each month since January 1, 1905, as reported by BRADSTREET'S for the United States and Canada, by Broomhall for Europe and afloat therefor, and the grand total thereof on the same dates:

[Five figures omitted.]

	U. S. and Canada			*Europe*			*Grand total*		
	1907	1906	1905	1907	1906	1905	1907	1906	1905
Jan. 1	83,2	77,1	60,3	87,2	82,8	90,2	170,4	159,9	150,5
Feb. 1	81,5	78,4	57,6	75,0	75,6	86,7	156,5	154,0	144,3
March 1	80,4	75,4	51,9	83,0	88,1	86,7	163,4	163,5	138,6
April 1	83,5	70,6	46,4	83,6	90,7	89,8	167,1	161,3	136,2
May 1	81,4	55,2	38,5	86,8	87,7	86,2	168,2	142,9	124,7
June 1	....	43,7	29,0	....	82,7	82,4	....	126,4	111,3
July 1	....	36,4	20,3	....	74,7	80,2	....	111,1	100,5
August 1	....	43,1	20,9	....	65,3	72,1	....	108,4	93,0
Sept. 1	....	45,2	22,8	....	70,7	73,0	....	115,9	95,8
Oct. 1	....	64,6	38,6	....	83,2	80,2	....	147,8	118,8
Nov. 1	....	73,0	58,2	....	88,1	75,9	....	161,0	134,1
Dec. 1	....	78,7	68,3	....	89,7	83,8	....	168,4	152,1

While stocks on this side of the water fell off slightly, those in Europe, as above intimated, increased some 3,200,000 bushels, the result being a gain of about 1,100,000 bushels in the combined world's stocks, which on May 1 aggregated 168,200,000 bushels, as against 167,100,000 bushels on April 1 and 142,900,000 bushels on May 1 a year ago. The total American supplies, it will be seen, aggregated 81,391,000 bushels, as against 83,497,000 bushels on April 1 and 55,200,000 bushels on May 1 a year ago. All American stocks, it will be seen, are 26,000,000 bushels larger than a year ago, while European supplies are less than 1,000,000 bushels smaller. In other words, the entire excess in world's visible wheat stocks is in this country and Canada, and 15,000,000 of the 25,000,000 bushels excess is found in Canada.

NEW UNION PACIFIC ISSUES.

Announcements were made after the Union Pacific and the Southern Pacific directors' meetings on Thursday that it was intended to ask authority from the stockholders in June for an issue of $75,000,000 4 per cent. convertible bonds of the first-named company and that the Southern Pacific was to offer its shareholders $36,000,000 of new preferred stock to be subscribed for at par. To provide for the convertible bonds the Union Pacific is to increase its common stock to the extent of $100,000,000, the proposed terms of the matter, so far as they have been formulated, being that the bonds may be exchanged for common stock within from three to five years, at 175 for the stock, the subscription for the bonds by the company's stockholders to be at 90 for the bonds. This news was not altogether a surprise. In fact, the intense activity which Union Pacific has been displaying of late has led to reports that something in the way of rights or privileges was being considered by the Harriman interests in control of the Union and Southern Pacific properties.

The actual result of the announcements was temporarily, at least, very discouraging to the stock market. Not only did Union

Pacific break with celerity and some violence, but there was evidently more or less of an uncomfortable feeling in regard to the entire stock list. As the revival of bullish manipulation had been largely based on the talk of presumably favorable developments in Union and Southern Pacific, it was at once realized that the actual developments fell far short of being material for a bull campaign. The street, it is hardly necessary to say, is still inclined to view new stock and bond issues with disfavor. In this particular instance, moreover, the point can be urged with not a little force that whereas only a few months ago the Union Pacific management made much of the value of its investments in the securities of other companies, it being gravely argued that it was in a position which made it independent of the money market, the corporation now comes forward with a demand for new capital fully as large as any of the successive propositions which have been made in the past year by various other prominent railroad systems. It is true that in some quarters these criticisms are looked on as being extreme, not to say unwarranted. The idea is even advanced that the matter has its favorable side, indicating that the Union Pacific and its allied banking interests have concluded that we are now having a normal money market in which such operations can be satisfactorily arranged without causing trouble, and it is also noted that the form of the new securities is much more satisfactory than if the Union Pacific had followed the fashion of putting out short-term notes. Still, it must be admitted that the Union Pacific's course seems to Wall street to be a curious commentary upon the position of the corporation financially, and it does not escape attention that the management was true to its traditions of making announcements of such importance in a sensational way.

WANTED—RAPID TRANSIT IN NEW JERSEY.

To the Editor of BRADSTREET'S:

SIR—That portion of New Jersey having close connection with the metropolitan district of New York City is feeling the full force of the spreading population of that great center. Cities and towns yet remain with their old distinct names and governments, but the spaces of farm and wood lands that once divided them have practically disappeared within ten years. This district, once merely the home of the more venturesome commuter, is now the land of the factory and its operatives. The commuter is still going back and forward, but the little rustic villages are gradually changing in characteristics to what might be described as suburbs of the great city. The only vacant land nearby is that of the Hackensack meadows, like a giant unused park.

This growth is going on despite the fact that facilities for transportation, greatly as they have grown and improved, are not by any means equal to the problem which they are called upon to handle. It may be said that a quarter of a century has passed since any new steam road has been built into this territory, while many of those that exist remain about the same as to their general capacity to handle suburban traffic quickly. In most cases engines have been made larger and more powerful, more cars added to trains and schedules readjusted; but always more behind than ahead of the demand. The trolley roads, it is true, have been all created within a quarter of a century, in many cases, however, merely being old horse railroads altered to the requirements of the new motive power, and extended a little into new territory. They, too, of late, have ceased to show new growth on a parity with the growth of population itself, and for long-distance hauling, the very fact that they pass through a crowded territory, over the old crooked highways, around hills and along valleys, makes them very slow mediums for rapid transit such as is now required, when it is considered how great are the distances that must be covered. Yet, despite all drawbacks, this New Jersey area within that circle is growing with astonishing rapidity, and bids fair to be the location of the factory and its operatives, slowly replacing the commuter, who, as of old, is being driven further and further out from the common center of the old city, until he is beginning to find his home in wild lands of mountain and lake in the hill country, but a few years ago seldom visited and little known. Even in this particular the problem of transportation drags on behind the demand, in that modern eastern fashion of such things so contrary to the western spirit of pioneering and showing the way. A.

Paterson, N. J., May 7.

EDITORIAL NOTES.

According to all accounts the railroad companies which have lines in Minnesota are to offer no opposition, legal or otherwise, to the enforcement of the law recently enacted by the legislature of that state, whereby they were obliged to reduce their passenger rates to 2 cents per mile on May 1, and were directed to cut down freight charges to the average extent of 10 per cent. on June 1. It was generally expected that the railway systems would bring suit to test the constitutionality of the new law, the Northern Pacific and the Great Northern, the two so-called Hill roads, being most prominently spoken of in that connection. Suggestions were also current that if the companies themselves did not institute suits of that kind the matter might take the form of an action, or actions, on the part of individual stockholders to prevent the enforcement of the law on the ground that it constituted confiscatory legislation. It would seem, however, that on consideration a number of the large companies concluded that it would be both useless and unwise to contest the right of the state to adopt and enforce the measure, and the same also appears to have been the final decision of the Hill party. It has been pointed out that to have individuals commence suits would be deemed to involve collusion between the stockholders who figured as plaintiffs and the roads. In fact, the more closely the question was viewed the more strongly did it seem to appear that opposition to the law would only intensify the anti-railroad sentiment which is already so strong in the northwest, and, in fact, serve as an incentive and reason for further adverse legislation, not only in Minnesota but in other states. Furthermore, the enormous earnings of the Great Northern and the Northern Pacific systems in the last few years, as shown by their annual reports, would be cited to show that the action of the legislature in no sense involved a confiscation of their profits. It accordingly appears that the railroads have dropped the idea of contesting the validity of the bill, and this determination is one which financial interests seem to regard as the wisest course which could be adopted under the circumstances.

A decision of some international interest has been rendered this week by the Supreme Court of Newfoundland in a case in which certain provisions of the treaty of 1818 and of the modus vivendi of 1906 were brought into question. In enforcing the Newfoundland bait act, the government of that colony caused the arrest of two native fishermen on the ground that they had violated the law in putting herring on board a Gloucester, Mass., fishing schooner. The men were convicted and sentenced to pay a fine or be imprisoned. They appealed to the Supreme Court of the colony, which has decided against them. The government contended that the bait act prohibits any British subject from putting fish aboard of any foreign vessel within the three-mile limit. The appellants replied that they did not need a license for the reason that fishery servants of United States vessels were entitled to be thus employed under the treaty of 1818, and that under the modus vivendi of last year the treaty right was equivalent to a license. The Supreme Court, however, held that the modus vivendi and the treaty were not involved, inasmuch as the appellants were not United States fishermen and enjoyed no exemption from colonial laws under those arrangements. It is understood that an appeal will be taken from the decision of the Supreme Court to the Privy Council of the United Kingdom, which is the tribunal of last resort in such cases.

One of the disclosures resulting from the investigation of the Union Pacific Railroad and its allied concerns conducted by the Interstate Commerce Commission last winter, was that the company in question had a contract with the San Pedro, Los Angeles & Salt Lake Railroad Company, which in effect prevented any competition between that line and the Union Pacific and Southern Pacific roads. This compact was made in 1903 at the time when the Union Pacific transferred to the San Pedro Company the portion of the Oregon Short Line Railway extending from Salt Lake City to Calientes, Nev., a distance of 520 miles, the Oregon Short Line Company, in compensation therefor, receiving a large interest in the stock of the San Pedro. When this deal between the Harriman interest and the one represented by Senator W. A. Clark and his associates, who had planned and financed the construction of the new independent road from Salt Lake City to Los Angeles was effected, there was little doubt that it involved a compact to operate the line in harmony with the Southern Pacific and thus to obviate any demoralization of Pacific coast rates, such as might have readily ensued had the Clark enterprise been managed in an aggressive way as regards traffic and rates. The fact brought out before the commission was that a formal traffic contract had been made, whereby the San Pedro Company obligated itself to conform its rates on business to and from Los Angeles to those of the Southern Pacific. The existence of such a contract, involving the direct stifling of competition in the field in question, has been frequently pointed to as one of the chief grounds on which the Interstate Commerce Commission might institute further proceedings against the Union Pacific and members of its management. The news which comes out this week is, however, to the effect that the contract has been voluntarily canceled by the two companies, ostensibly on the ground that a statute has been enacted by the California legislature whereby such agreements are rendered illegal. At the same time the impression in railroad and financial circles is that the action just taken was due in the main to the possibility that the agreement would be used by the Interstate Commission as a means of attack upon the Union Pacific-Southern Pacific properties and their management, the circumstance that it mainly had reference to interstate business, and not to local business coming under the jurisdiction of the California state laws, lending a good deal of force to this feeling.

A good deal of interest for the American financial public always attaches to the annual report of the Deutsche Bank of Berlin, which institution is second only in importance to the Imperial Bank of Germany, and which plays a large part in the monetary and investment affairs of other countries, especially of the United States. Some weeks ago attention was called in these columns to the remarks contained in the report of this bank, in which its management spoke about the way in which the creation of new undertakings and of securities, not only in the United States, but also in Europe and especially in Germany, had progressed during 1906 at a greater rate than the growth of capital, with the natural restrictive effect upon economic development in all directions. It is instanced that the German municipalities which were obliged to issue new bonds for public works and other purposes found it necessary to make the rate of interest on the same 4 per cent., instead of 3½ per cent. as heretofore, while correspondingly enhanced terms have had to be paid by industrial and other corporations seeking to borrow or raise additional capital. The opening paragraph of this year's report deals with the stagnation on the Bourses and the inactive market for securities of all descriptions. It is, however, very satisfactory to note that even under disadvantageous circumstances at home and abroad the management of the Deutsche Bank should be able to make an excellent return as regards its operations for the year 1906. Its turnover for the twelve months amounted to the equivalent of $20,378,000,000, an aggregate without parallel since its foundation in 1870. All the other important items show a corresponding growth, and while maintaining the dividend rate upon its stock at 12 per cent., the figure at which it has stood for the past three years, the reserve fund of the institution was increased by over $5,000,000, the total to the credit of this item being $23,809,524, against a share capital in American money of $47,619,047.

RECENT LEGAL DECISIONS.

[*Prepared for* BRADSTREET'S.]

Prohibition—Non-Intoxicating Cider.

The Supreme Court of Maine held, in the case of State vs. Frederickson, that prohibiting the sale for tippling purposes or as a beverage of cider, which is in fact unfermented and non-intoxicating, does not violate the constitutional rights of the owner.

Landlord's Liability—Water and Light.

The Supreme Court of Minnesota held, in the case of East Grand Forks vs. Luck, that a statute making the owner of premises liable for water and light furnished by the municipality to a tenant was not unconstitutional as a taking of property without due process of law or as causing one person to pay for the debts of another.

Statute of Limitations—Payment.

The Supreme Court of Minnesota held, in the case of Woodcock vs. Putnam, that in order to prevent the running of the statute of limitations a payment upon the debt must be made voluntarily by the debtor in person, or for him by one having authority, or for him and in his name by one without authority, whose act subsequently is ratified by the debtor.

Note—Surety—Discharge.

The Maryland Court of Appeals held, in the case of Vanderford vs. Farmers' & Mechanics' National Bank, in construing section 138 of the Negotiable Instruments law of that state, that the ways prescribed in that section for the discharge of a person primarily liable on a negotiable note are exclusive, and hence that a plea setting up that one of the makers of a promissory note signed it as surety only and had been discharged by an extension of time by the payee to the principal debtor was fatally defective.

Fraternal Insurance—Vested Rights.

The New York Court of Appeals held, in the recent case of Ayers vs. Grand Lodge of the Ancient Order of United Workmen of the State of New York, that a member of a fraternal life-insurance society has a vested contractual right in his insurance which the society cannot defeat by adopting a rule during his membership and without his assent purporting to deprive all members who engage in the liquor business of insurance benefits, and that this is so notwithstanding his application for membership and the certificate issued to him contain provisions that he will comply with all laws and regulations of the society then or thereafter adopted.

Street Railway—Paving Obligations.

The Supreme Court of the United States held, in the case of the Rochester Railway vs. City of Rochester, that a contract exemption of a street railway company from paving obligations was not a "privilege" within the meaning of chapter 254 of the laws of 1867 as amended by chapter 503 of the laws of 1879, empowering a railway company, being the lessee of the property of another railway company, to acquire the whole of the latter's capital stock, in which case its "estate, property, rights, privileges and franchises" shall vest in and be held and enjoyed by the purchasing corporation "fully and entirely without change or diminution." The court further held that a street railway company incorporated under chapter 252 of the New York laws of 1884, which imposed upon it the duty of paving a portion of the street, could not claim the benefit of a contract exemption from paving obligations enjoyed by a predecessor in title.

Discrimination—Passengers—Color.

The Kentucky Court of Appeals held, in the case of Chiles vs. Chesapeake & Ohio Railway Company, that in the carriage of white and colored passengers, carriers have the right, independent of any statute, to enact rules and regulations requiring colored persons, solely because of their race and color, to occupy coaches and compartments in coaches separate and distinct from those set apart for and occupied by white persons, and that this rule extends to all passengers without reference to whether they are interstate or intrastate. The court said that carriers cannot discriminate against a passenger merely because of his color, and that a colored man who conducts himself properly and has a first-class ticket is entitled to demand accommodations similar in quality and convenience to those afforded to white persons having similar tickets, but that while the carrier cannot in the manner of service and accommodations discriminate between passengers holding similar tickets solely on account of their color, it has the right to separate and classify them. The court further held that when there are two cars in a train or two compartments in a car substantially alike in quality, convenience and accommodation, neither white nor colored passengers have the legal right to complain that they have been discriminated against merely because the carrier required them to occupy a car or compartment set aside for their accommodation.

Corporation—Sign—Penalty.

The Kentucky Court of Appeals held, in the case of Commonwealth vs. American Snuff Company, that in an action against a corporation to recover the statutory penalty for failing to have the word "Incorporated" printed or painted under its corporate name on its place of business, as required by section 576 of the Kentucky Statutes, an answer by the defendant that it had the letters "Inc." printed under its corporate name, and that said letters "Inc." constituted an abbreviation of the word "Incorporated" and were so understood by the masses of men, was not a sufficient compliance with the requirements of the statute, and that a demurrer to the answer should have been sustained.

Railroad—Condemnation—Damages.

The Supreme Court of Indiana held, in the case of New Jersey, Indiana & Illinois Railway Company vs. Tutt et al., that an artificial ditch cut by a landowner through low ground for the purpose of expediting surface drainage, and which is only employed occasionally and temporarily in collecting and carrying away storm and surface waters resulting from heavy rains and melting snows, is not such a water course as a railroad condemning the land is bound to restore and keep open under section 5153 of the Indiana statutes. The court further held that the cutting of fields into inconvenient shapes, the interruption of passage from field to field, the increased hazard from fire and the necessity for additional fencing, are proper matters for consideration in assessing damages for land taken by a railroad.

Insurance—Beneficiary—Change.

The Supreme Court of Louisiana held, in the case of Alba vs. Provident Savings Life Assurance Society of New York, that where by agreement between the insurer and the insured a beneficiary is named in a policy of life insurance, subject, however, to the expressed condition that the insured may thereafter at any time upon notice to the insurer change such beneficiary, the original beneficiary has no standing to interpose between the contracting parties and prevent the insured from exercising the right thus secured to him by his contract. The court further held that when the original beneficiary named in a policy of life insurance, which authorizes the insured to change the beneficiary at any time, is the wife of the insured, and the latter thereafter changes the beneficiary and assigns the policy to the person whom he substitutes for the wife, the question of the validity of the change and assignment so made is one that in no manner concerns a minor child, issue of the marriage between the insured and his wife.

Gas—Rate—Reasonableness—City.

A decision has been rendered by the New York Court of Appeals in the case of The Brooklyn Union Gas Company vs. The City of New York, affirming the rulings of the courts below refusing to permit the authorities of the City of New York to inspect the books and manufacturing plant of the Brooklyn Union Gas Company. This inspection was sought for the purpose of ascertaining the cost of the production of gas to the company as a factor bearing on the question as to what constituted a reasonable price to the consumer. The question was raised in an action to recover for gas furnished to the city at a price less than the maximum figure the gas company was allowed to charge under a state statute. The City of New York resisted the suit on the ground that the price charged was excessive, and contended that the trial court should ascertain what was a reasonable price and give judgment for that only. The court below held that the cost of the production of gas was, in the case before it, immaterial; that the rule that public service corporations might charge only a reasonable price had no application where the legislature had fixed the rate, and that the courts could not declare that a price so fixed was excessive. This ruling it is that the state court of last resort has sustained.

BUSINESS NOTES.

Output of Diamonds.

The *Pall Mall Gazette* says that "like all precious metals and stones, the unit of weight usually employed in regard to diamonds is the carat, of which 151½ go to make up a single ounce. To think of sacks of diamonds by the ton staggers the imagination; indeed, the average annual output of the Kimberley mines is not more than half a ton all told. Statistics have been published recently at Cape Town giving the output for several years past of the Kimberley mines and the river diggings. These yielded in the three years 1903-05 nearly 7,250,000 carats, say a ton and a half. The monetary value of these diamonds was £14,450,000. Since the first diamond was discovered by the banks of the Vaal in 1867 down to the end of 1906 it is estimated that the total weight of diamonds extracted from the Griqualand mines is over thirteen and a half tons, of a market value of fully £95,000,000. If statistics of this sort can be trusted—and in the case of the South African yield they closely approximate to the facts—only seventeen tons of diamonds had been mined all over the world to the end of 1901. With the same relative output since that year from Brazil and India the world's output of diamonds is now more than twenty tons. The figure seems small, considering the ages diamonds have been worked in India and elsewhere in the east, and must be largely guesswork with respect to the output in antiquity. It is, however, certain that more diamonds have been placed on the market in the last forty than in the previous thousand years."

Fall River Mill Dividends.

The statement of quarterly dividends paid by Fall River mills for the second quarter of the year, issued by G. M. Haffards & Co., discloses a distribution of $524,525 on a capital of $24,775,000, as compared with a distribution of $289,025 in the corresponding quarter of 1906. The average for the quarter on the capitalization was 2.15 per cent., or at the rate of 8.6 per cent. annually. The dividend list in detail is as follows:

	Capital	*Rate*	*Amount*
American Linen Co	$800,000	1½	$12,000
Ancona Co	*300,000	†1½	1,500
Arkwright Mills	450,000	1½	6,750

Business Advertising.

The Bureau of Statistics of Labor of Massachusetts has always had a reputation for research, both under Mr. Wadlin, the former director, and Mr. Pidgin, the present incumbent, and from the bulletins of this organization we have oftentimes been able to extract much interesting matter. One of the most recent compilations of this statistical adjunct of the commonwealth of Massachusetts is of interest, inasmuch as the subject matter relates to business advertising. The investigation was undertaken in order to determine the proportional representation of Massachusetts manufacturers and dealers in this line of advertising, and a tabulation has been made of the advertisements contained in twenty-one of the leading magazines of the country and three prominent weeklies. In making the tabulation, no account was made of advertisements relating to the publications of the house that printed the magazine; advertisements of a professional nature and of all institutions of learning were also omitted from the tabulation, so that the figures presented in the following table may be considered as indicative of appeals of business houses for the articles manufactured or sold by them.

	Advertisements	*P. ct.*		*Advertisements*	*P. ct.*
New York	1,144	33.73	New Hampshire	6	.18
Illinois	408	12.03	Colorado	5	.15
Massa'setts	398	11.73	District of Columbia	5	.15
Ohio	288	8.49	Nebraska	5	.15
Michigan	286	8.43	Rhode Island	5	.15
Pennsylvania	265	7.81	Georgia	4	.12
Indiana	117	3.45	Kentucky	4	.12
Connecticut	103	3.04	Washington	4	.12
New Jersey	101	2.98	No. Carolina	2	.06
Wisconsin	66	1.94	Kansas	1	.03
Missouri	46	1.36	Louisiana	1	.03
Minnesota	36	1.06	Montana	1	.03
Virginia	20	.59	New Mexico	1	.03
California	15	.44	Oregon	1	.03
Vermont	13	.38	Utah	1	.03
Iowa	13	.38			
Maine	11	.32			
Maryland	8	.23			
Tennessee	8	.23	Total	3,392	100.00

The whole number of advertisements contained in the twenty-four magazines and weeklies previously referred to, subject to the eliminations mentioned, was 3,392. Of these, 1,144 were inserted by New York houses, that is, business houses located in the state of New York, and they represent 33.73 per cent. of the entire number. The state of Illinois ranked second, with 408 advertisements, or 12.03 per cent., while Massachusetts ranked third, with 398 advertisements, or 11.73 per cent.

Texas Oil and Louisiana Consumers.

Some few years ago it was thought that the oil fields of Texas could be depended on to provide the railway and sugar-refining interests of Louisiana with a cheap and clean supply of fuel for a long time. Now it appears that the supply has not materialized to the extent expected. It is true, of course, that the oil was of sufficient efficiency for a time, but recently the railways have returned to coal for the generation of power, and it is understood that the sugar refiners are making changes preparatory to going back to coal. Two causes have operated to bring about the change, viz., the immense supply which was at first available has begun to dwindle, and adequate quantities are difficult to obtain, and, secondly, the price of oil has risen until it has ceased to be economical when compared with coal. But back of these causes, according to the New Orleans *Picayune*, is the fact that "the best oil property was gradually absorbed by great oil combinations." In this situation, however, the Louisville *Courier-Journal* calls attention to the fact that, while Louisiana is now dependent on Pennsylvania for coal, a much nearer source of supply might be found in the coal field of western Kentucky, which was worked during the war, and which might again be made available by dredging the Ohio river and facilitating transportation.

Census Returns on Manufactures.

The following data, showing the importance of manufactures in various states, have been taken from the returns of the Federal Census of Manufactures for 1905, the comparisons being with the figures reported for 1900:

Classsification	1905	*Inc. p. ct. over 1900*

CURRENT BUSINESS NEWS.

Commercial.

The N. K. Fairbank Company estimate stocks of lard held in the United States, Europe and afloat therefor on the dates mentioned: May 1, 1907, 234,844 tierces; April 1, 1907, 231,312; May 1, 1906, 229,320; May 1, 1905, 332,204; May 1, 1904, 254,668; May 1, 1903, 146,667.

In issuing instructions for a weekly army ration of one pound of preserved meat to replace fresh killed meat the British War Office has sent a circular letter to all commands in home stations notifying them that brands of American meat thus issued have been prepared in establishments that have been carefully inspected by army officers whose reports satisfied the Army Council that the quality of meat used and the conditions under which it was preserved and canned were in every way satisfactory.

The Congress of San Domingo, in ratifying the new treaty between the United States and San Domingo, stipulated the acceptance of amendments to the treaty proposed by members of the Dominican Committee on Foreign Affairs, April 23. The amendments referred to are as follows: Article I.—That the President of the United States appoint a receiver for the customs of San Domingo, he to have only the assistance of the customs employees of the Dominican government. Article II.—That the government of the United States extend protection to the receiver only in case the the Dominican government is unable to do so. Article III.—That, in view of the fact that the receipts from customs dues during the last two years have exceeded $2,000,000 yearly, a system of tariff reform be adopted immediately. Article IV.—That the treaty must have the approval of the Dominican Congress and of the United States Senate previous to its ratification by the high contracting parties.

Consul-General G. E. Anderson, at Rio de Janeiro, has reported to the Bureau of Manufacturers that the Brazilian coffee crop for the current season would amount to 17,480,274 bags for the whole of Brazil.

The Ohio state report puts the May 1 condition of wheat at 74 per cent., against 87 on April 1 and 103 on May 1 last year.

The *Northwestern Miller* says: "With May 1 here probably not over half the wheat crop in the northwest has been seeded, and the season cannot be construed otherwise than as backward and unfavorable. However, many millers and elevator men hold that the situation is not alarming. Seasons and instances are cited where wheat has been planted after May 1 and a large crop raised."

Secretary Wilson, of the Department of Agriculture, takes a comparatively optimistic view of crop conditions, for he is quoted as saying that while spring seeding is a little backward on account of the cold weather there is plenty of time between now and the last of September to grow a crop of all kinds of grain. Moreover, he says: "From my knowledge of the southwest, where so much of our winter wheat is grown, the advices I have at hand lead me to believe that the southwest will have its usual crop this year."

Belgium, Holland, Germany and Italy are expected to be liberal buyers of wheat and flour. According to Broomhall the continent may require fully 8,000,000 bushels weekly for several months. The United Kingdom will want over 4,000,000 weekly, while other countries over-sea will require about 1,500,000.

Foreign crop conditions as published Tuesday in the Liverpool *Corn Trade News:* United Kingdom—Warmer, dry weather is wanted. France—The weather has improved and the outlook for the crops is good. Supplies are scarce and dearer. Germany—The weather has shown some improvement during the past week. Supplies continue exceedingly scarce and very dear. Hungary—An official report makes the outlook for winter wheat very unfavorable, 10 per cent. of the acreage having been reploughed. Spring crops show small growth, with much of the area still untilled. Roumania—An official report confirms 25 per cent. of the winter-wheat area having been reploughed. The weather is now fine and warm, but the crops need rain. Bulgaria—In the north reports make mention of moderate damage, while in the south it is estimated that there has been between 20 to 40 per cent. damage, as a result of winter-killing. Russia—Some damage to winter wheat is reported in the southwest; elsewhere the outlook is favorable. Rye—In the famine region the outlook is unfavorable. Spring crops—In the southern belt the spring crops have had a very late start, otherwise the outlook is favorable. In the famine region the outlook is unfavorable. Supplies show a slight increase. Italy and Greece—The crop outlook is only fair. Spain—Crop conditions continue favorable. North Africa, Belgium and Holland—There are moderate complaints heard regarding the outlook for the crop.

The April statement of the British Board of Trade shows increases of £9,726,800 in Great Britain's imports and £7,384,600 in its exports. The principal increases in imports were: Food, £1,750,000; raw materials, £6,500,000, of which £1,750,000 was cotton from the United States, and wool, £1,000,000. The principal increases in exports were: Manufactures of iron or steel, £1,000,000, and cotton textiles, £1,750,000. From these returns, imported goods reëxported being omitted, the following comparative table of the United Kingdom's April trade in merchandise may be compiled:

	1907	1906	1905
Imports	£56,781,031	£47,054,231	£43,282,826
Exports	34,416,906	27,032,306	24,138,468
Excess imports	22,364,125	20,021,925	19,144,358

Excess of imports in May, 1904, were £21,695,929; in 1903, £20,765,954; in 1902, £22,707,399; in 1901, £24,405,859, and in 1900, £20,036,729.

The Kentucky state report makes the condition of wheat 89 per cent., against 99 in April and 97 last year, when the crop was 11,500,000 bushels. Condition of rye 88, against 93 last year. Clover and grasses are retarded by cold weather.

The Secretary of Agriculture of Kansas denies that any considerable damage has yet resulted either from the ravages of the green bug or the unseasonable cold weather.

In a review of business conditions in the principal nations of the world, the London *Statist* says that "the returns of the Prussian state railway system for March are extraordinarily favorable. In the United States everybody agrees in saying that the signs of prosperity are absolutely convincing. The British Board of Trade returns month after month show that trade is steadily improving. In France trade is better than it has been for many years. In short, so far as all the available evidence goes, it tends to show that trade has nowhere been set back, while in many countries it has improved." Our English contemporary concludes that the prosperity of the world will make further progress. More savings will be effected, and there will be larger sums to employ both in entering into new enterprises and investing in old securities.

The Missouri state crop report, which appeared Monday, was unfavorable, showing a loss of 12 points during the month in the condition of wheat, which is placed at 82 per cent. on May 1, against 94 April 1 and 87 a year ago, when the crop was 36,000,000 bushels. The deterioration was ascribed mainly to freezing and dry weather. The acreage shows an increase of 2 per cent. The oats area has increased 2 per cent., and the condition is 75 per cent.

The Duluth *Commercial Record* states that the spring-wheat area will be reduced 10 to 12 per cent.

According to reports received from all parts of California by The California Promotion Committee, crop conditions have a much better outlook than a month ago. With the exception of wheat and other cereals in the flooded district, prunes in the Santa Clara valley, and apricots, indications point to better crops everywhere than in 1906.

The weekly summary of weather conditions issued Tuesday by the Weather Bureau said: In the south Atlantic and east gulf states and in most of the Pacific coast region the temperature in the week ended May 6 was favorable, but in the Rocky mountain region, west gulf states, central valleys and lake regions it was abnormally cold. Temperatures much below freezing occurred throughout the central and northern Rocky mountain region, in the Missouri and upper Mississippi valleys and in the lake region and northern New England, a minimum of sixty occurring at Devils Lake, N. D., on the 2d. Heavy frosts were general in the northern districts and light to heavy frosts occurred as far south as northwestern Texas, Oklahoma, northern Arkansas, Tennessee and the middle Atlantic states. Ample moisture exists in all districts, except in southern Florida and portions of northern Iowa and South Dakota, excessive and damaging rains having fallen in lower Mississippi valley and central gulf districts. Heavy snow occurred in portions of the central valleys and lake region on the 3d and 4th. There was much cloudiness, especially in the Atlantic coast and gulf states.

Germany and Great Britain have reached an agreement concerning their various South African controversies, which gives reason for the hope that any differences of opinion arising in the future will be settled in a friendly manner.

The Santos Coffee Exchange has adopted the standards of the New York Coffee Exchange, and all questions as to quality arising between merchants at Santos will be settled on the basis of the New York type.

Stuyvesant Fish, upon his return this week from a 7,000-mile trip, said the country is all right—west and north of Wall street. Mr. Fish says railroad work is backward, that the railroads will need money in large volume and that they will have to pay higher rates for it this year than formerly. Mr. Fish also suggests that it would pay investors to look carefully into the wonderful development which is going on in so many parts of the west and southwest, particularly in southeastern Kansas, and the northern parts of Oklahoma and the Indian Territory. There, in consequence of the development of gas and oil fields, manufactories of vast importance are growing up in such lines as cement, brick, glass, salt, etc., from which shipments are now being made to nearly all parts of the Union.

On March 31, 1906, there were in India 204 cotton mills, containing 52,281 looms and 5,293,834 spindles. Of this number 104 were exclusively spinning mills; eight were exclusively weaving mills, and in ninety-two both spinning and weaving were carried on. They employed a daily average number of 212,720 persons. The total production of yarn in the mills in British India is, as far as reported, as follows:

	Rounds		Rounds
1901-02	560,004,848	1904-05	555,948,426
1902-03	558,812,040	1905-06	655,618,831
1903-04	556,190,792		

The following table shows for the eleven principal winter-wheat states the percentage of the acreage sown last fall that is now reported as abandoned; the acreage remaining under cultivation, three figures omitted; also the averages of condition on the dates mentioned:

	P. ct. of acreage abandoned	Now under cultivation	May 1, '07	April 1, '07	May 1, '06	May 1, '05	10-yr av'ge
Kansas	4.8	5,645	82	99	87	92	87
Indiana	15.0	2,362	74	81	94	95	77
Missouri	4.5	2,213	84	96	89	93	85
Ohio	15.0	1,882	77	83	94	94	80
Nebraska	1.5	2,213	91	99	92	97	93
Illinois	5.5	2,228	88	95	88	89	80
Penna	2.5	1,618	92	95	96	95	88
California	18.0	1,368	79	80	89	90	84
Oklahoma	35.0	803	72	76	93	89	88
Texas	70.0	380	43	51	91	94	82
Michigan	8.8	878	75	81	78	95	78
U. S.	11.2	28,132	82.9	89.9	90.9	92.5	85.5

The average condition of winter rye on May 1 was 88, as compared with 92 on April 1, 1907; 92.9 on May 1, 1906; 93 5 at the corresponding date of 1905, and 89.5 the mean of the May averages of the last ten years.

Financial.

The output of gold from the Rand mines in April is estimated by London Kaffir houses at 530,000 ounces fine. The March output of the Transvaal was 538,000 ounces fine gold, but that month contained one more day than April. Value of the April output, roughly, is $11,262,500, as compared with $11,436,950 in March, $11,684,850 in December, the record month, and $9,328,925 in April, 1906. Prior to the Boer war the high record of Transvaal production was $8,604,000 in August, 1899. Comparison of the value of last month's output with previous months and with February in other years is as follows:

April, 1907	$11,262,500	April, 1906	$9,328,925
March, 1907	11,436,950	April, 1905	8,477,750
February, 1907	10,482,170	April, 1904	6,497,830
January, 1907	11,418,705	April, 1903	4,839,630
December, 1906	11,684,850	April, 1902	2,539,900
November, 1906	11,328,125	April, 1901	None
October, 1906	11,481,850	April, 1900	None
September, 1906	10,727,875	April, 1899	8,196,700

According to the calculations of Laveleye, the Belgian economist, the people of that country have invested $2,335,495,000 in various forms of securities and industrial enterprises. In ten years there has been an increase of $972,800,000. This increase was divided among new investments and enhanced values of old investments as follows: New investments, $854,600,000; enhanced values, $108,200,000. The average amount of increase a year is estimated at $80,000,000, in securities alone, in a population of 7,000,000. In 1896, 64 per cent. of the total investment of the country was found in securities bearing a regular and fixed rate of income. To-day this has shrunk to 55 per cent., the other 45 per cent. being invested in industrial undertakings.

Wm. A. Read & Co.

INVESTMENT SECURITIES

25 Nassau Street, New York

BOSTON CHICAGO BALTIMORE

The fifth installment on account of the new issue of Great Northern stock, amounting to 5 per cent. of the whole, $3,000,000, was payable Tuesday. The previous installments were for 10 per cent. each, so that with the payment of Tuesday's installment the road will have received about $27,000,000. Only one more installment is payable this fiscal year, viz.: Five per cent. on June 7. Thereafter installments are payable monthly until April 7, 1908, 5 per cent. on each date.

A summary of the more important facts relative to postal savings banks is given in the following table, three figures being omitted from the items referring to deposits:

	When estab'd	No. of depositors Dec. 31, 1905	Deposit's' holdings Dec. 31, 1905	Dep'ts, 1905	Withdraw'ls, 1905
Austria	1882	1,900,194	$42,536	$27,550	$24,051

* June 30, 1906. † December 31, 1904. ‡ December 31, 1896.

The minimum deposit accepted by the postal banks of Canada is $1, but the banks of some of the other countries take as low as 10 cents.

The New York state superintendent of banks has given notice that the Irving Trust Company of New York City will be permitted to change its name to the Fidelity Trust Company on May 22 next.

The Washington Railway & Electric Company has declared a semi-annual dividend of 2½ per cent. on its preferred stock, payable June 1. Notice is given that the trust under which the stock of the company has been held will expire on June 1.

New York City is planning to issue about $20,000,000 4 per cent. bonds within the next few months, and, according to an announcement made by Comptroller Metz, some of the bonds will be of the coupon form. In recent years the city has issued only registered bonds, but a demand has arisen for the coupon variety.

In the annual report of the General Electric Company for the year ending January 31, 1907, President C. A. Coffin states that the sales billed for the first two months of the present fiscal year were 50 per cent. greater than last year, and that if this growth continues additional capital will be needed. Total sales last year were $60,071,883, compared with $43,146,902 the year before. Operating expenses were $53,106,594 and net earnings $8,427,842. After the payment of $4,344,342 in dividends and charging off $999,999, a surplus for the year remained of $3,083,501, making a total surplus of $15,110,796.

Railroads.

The shipments of anthracite coal over the various roads for April and since January 1 compare as follows with the like periods of 1906:

	April 1907	April 1906	From Jan. 1 1907	From Jan. 1 1906
Reading	1,311,543	53,757	4,201,505	3,355,502
Lehigh Valley	999,936	22,870	3,587,766	2,849,149
Jersey Central	796,787	2,534	2,685,279	2,064,204
Del., L. & W.	863,048	144,645	3,378,544	2,760,025

* Men on strike.

Industrial.

According to the *Iron Age:* "There has been a notable resumption of work on the part of the blast furnaces, a net gain of ten stacks being recorded in the monthly statistics. The result is, that on May 1 there were in operation 323 anthracite and coke furnaces with a weekly capacity of 523,912 tons, which is the record thus far for the country, and compares with 497,456 tons on April 1. The output for April, a short month, was 2,216,558 tons, or at the rate of 73,885 tons daily, as compared with 2,226,457 tons in March, or 71,821 tons daily. Three large furnaces have gone in during the first few days of May, which will add about 6,000 tons per week to the capacity."

Quotations for Government, State, Railroad and Miscellaneous Bonds, Week ending May 9.

STATE OF TRADE.

[A Summary of Special Telegrams to BRADSTREET'S.]

Weather conditions, as for five weeks past, are still the key to the irregular crop and trade reports coming from a wide area of country. Freezing weather and snow have hurt trade and retarded crop preparation and growth in the northwest, while low temperatures and heavy rains affect southern distribution and crop growth, and measurably influence distribution in the central west and east. Some slight improvement in winter wheat is found in Kansas and Nebraska, where rain or snow has helped the plant, though cold weather retards growth. These causes, however, are mainly temporary, as shown by a few reports of improvement where the weather has permitted, and may be removed by good, seasonable weather, but perhaps the best illustration of the effects of the past six weeks of cold weather is found in the remark that spring and summer goods have been dull at retail, while coal for domestic uses has sold better than in any previous year at this period.

Despite the between-seasons period, and the slowness of retail trade and collections, there are few complaints coming from jobbing and wholesale lines, except that filling-in orders are light and that retail stocks are reported heavy. One explanation of this is that jobbers and wholesalers had a very heavy volume of business booked, deliveries upon which have been slow, and the lull has enabled the latter branches to catch up measurably with business. Demands from wholesalers, therefore, while smaller than some months ago, have been sufficient to keep all actively engaged, and crop and trade developments from now on will be closely watched to allow of a proper appreciation of future needs of fall trade.

Other developments of the week have been encouraging. The iron and steel industries are actively engaged, current production is, in fact, at the maximum, and other industries, particularly building, are being actively pushed. Labor disturbances, taken as a whole, are not serious, excepting at San Francisco, where business has been brought to a complete standstill by strikes of street car hands and telephone operators, and at New York, where a nearly general strike of dock laborers has caused much interruption to the movement of freight. Complaints of light loading of steamships and of some ships returning to Europe with parts of cargoes unbroken are heard. Higher prices for cereals, cotton and other natural products are a result of bad crop reports and broadening speculative interest. European crop reports are little better than our own, and partly explain higher quotations offered for wheat and corn. Money is easy, demand declining somewhat, but collections are backward, owing to poor retail trade. The railways have about won out of their blockaded condition, being helped by the final reopening of water navigation, and increases in gross receipts by individual roads are expanding. Clearings reflect reduced stock speculation at New York in smaller totals than last week or this week a year ago.

Plentiful moisture and snow lead to better reports from winter wheat, but growth is retarded by lack of warmth. The plant is late and small. Spring-wheat seeding is delayed by cold weather and snow, and the seed does not germinate. A smaller area, planted late, seems certain. Corn plowing is well advanced, but planting is backward, the ground being too cold for the seed. Oats are backward. Corn and cotton are replacing wheat in the southwest. Cold weather retards the growth of cotton, but rather more favorable reports are coming from Texas and Georgia. Too much rain is complained of as retarding planting, but the damage from this source is not thought serious if warm weather follows.

Another week of bad weather and crop reports has added still further to the strength of cereals and cotton. Continued cold weather in the winter-wheat belt with freezing temperatures made for strength, but interest as to the crop situation was largely transferred to the spring-wheat belt, in which cold weather and snow interfered with seeding in our own northwest and in Manitoba. Efforts to minimize this were very largely abandoned and fuller appreciation of the real position of affairs was apparent. To add to the strength of wheat, foreign markets were affected by the talk of damage to European as well as American crops, and by the heavy advances shown in quotations at leading Hungarian centers. Wheat advanced 3½ to 4 cents, while corn and oats were fractionally higher in sympathy. Wheat is now 10 cents higher than a month ago and 1 cent above a year ago.

Cotton advanced 35 points for spots, 60 points for May and 50 points for July on continued unfavorable crop advices and reported improvement in demand for cotton goods for fall delivery. Some of the advance in futures was shaded later on realizing. Southern crop reports this week laid stress on the excessive rains reported in the gulf and lower Mississippi valley sections. The weather was a little warmer, but much cotton was reported flooded out and needing replanting.

Hog products are higher this week, pork advancing 75 cents and lard 8 points, while cottonseed oil went up 7 cents, these movements being not unconnected with the bad grain-crop reports and uneasiness as to the possible lateness of corn planting.

Further strength has developed in the foundry pig iron markets of the country. While transactions have not been so large as they were a week ago, there is a remarkably heavy inquiry, and consumers, in many instances, have been unable to place orders simply because producers in the south and in the central-western districts have practically withdrawn from the market. Further advances are expected. In the Chicago district, southern irons are up 50 cents to $2 per ton, but it is to be noted that there are some resellers at 50 cents under asking prices. Production is at maximum, but stocks are said to be light. English markets are firmer and still higher prices are looked for, the strong undertone being due to reduced stocks and heavy demand from Germany. In the east some fairly large orders for basic pig have been placed, purchases being mainly for third-quarter delivery. Crude steel is very scarce in the central west and most of the probable product for the year has been sold. As a result of the high prices demanded for pig iron, engines have been advanced, and quotations on machinery and tools are likely to move upward. Makers of agricultural implements have purchased steel bars more freely, but bar iron is lower. New business in sheets is not large. While large orders for steel rails for 1908 delivery are said to be pending, it is noteworthy that the railroads have not as yet figured as liberal purchasers. Orders for structural steel are only moderate. Demand for tinplate is very heavy. Scrap iron is weak at most points. Coke is still low, despite the activity of blast furnaces. Anthracite coal is active, but bituminous is dull. Copper is dull and lower, owing to the fact that when prices were advancing last week some large quantities were offered at concessions, which in turn deterred European demand and whatever domestic inquiry there was.

Prices of staples moved irregularly during April, many staples, such as cereals, cotton, some vegetable, oils and dried fruits, advancing because of bad weather and crop reports, while live stock, provisions and dairy products, leather, naval stores and miscellaneous products declined, the net result being a barely perceptible easing of the general index number. BRADSTREET'S index figure on May 1 was $8.8556, a decline of one-fifth of 1 per cent. from April 1 and of 2 per cent. from March 1. Compared with May 1 a year ago the gain is 6.6 per cent., while an increase of 7.5 per cent. is shown over February 1, 1900, and the increase over July 1, 1896, is 55 per cent.

Large interior movement in this country and Canada during April, the result of relieved congestion on the railways, was responsible for a smaller than ususal decrease in visible wheat supplies. This, coupled with a gain in European stocks, results in a net gain in world's stocks, a rare occurrence in April. World's stocks increased 1,100,000 bushels, against a decrease a year ago of 18,000,000 bushels. European stocks are less than 1,000,000 bushels smaller than a year ago, while American and Canadian stocks are 26,000,000 bushels larger, three-fifths of the increase being in Canada.

The government report of winter-wheat condition as of May 1 is in line with the conservative estimates of deterioration in showing a condition on May 1 this year of 82.9, as against 89 9 on April 1, 94.1 on December 1, 1906, and 91 on May 1, 1906. The area abandoned is given at 3,532,000 acres, as against only 1,717,000 abandoned a year ago. The crop on this basis is given by the government at 405,000,000 bushels, as against 453,000,000 bushels indicated on May 1, 1906, and 493,000,000 bushels actually harvested last year.

Stock-market quotations at New York tend to recede on unfavorable crop news and on the disappointment in speculative circles attending the final announcement of the Union Pacific financing. Bonds are dull. Foreign exchange is quiet at 4.86.25 for demand sterling, and expectations of gold exports, rife at the beginning of the week, were checked by a firmer appearance in the New York loan market.

The sugar markets are stronger, Europe leading, with higher prices for beet grades, cane sugars here following and in turn affecting refined, which is ten points up, while raws are six points up. Poor crop reports are a strengthening influence on raw grades. The longshoremen's and refinery laborers' strikes affect movements of supplies. Coffee is without much change. Visible supplies on May 1 aggregated 16,009,449 bags, against 15,397,742 bags on April 1 and 10,356,157 bags on May 1 a year ago. The stock in the United States is about the same as a year ago, while the price, spot, is 6¾, against 8 cents last year.

Bank clearings for the week ending May 9 aggregate $2,855,497,000, 1 per cent. under last week, and 7.9 per cent. below this week last year. Outside of New York exchanges amount to $1,151,284,000, one-half of 1 per cent. less than last week, but 17.5 per cent. over the corresponding week last year.

Business failures for the week ending May 9 number 154, against 163 last week, 162 in the like week of 1906, 158 in 1905, 201 in 1904 and 182 in 1903.

Wheat, including flour, exports from the United States and Canada for the week ending May 9 aggregated 2,994,419 bushels, against 2,234,756 bushels last week, 2,142,062 bushels this week last year, 899,355 bushels in 1905 and 3,302,240 bushels in 1902. For the past forty-five weeks of the fiscal year the exports are 146,794,906 bushels, against 115,748,211 bushels in 1905-06, 54,492,429 bushels in 1904-05 and 220,430,273 bushels in 1901-02. Corn exports for the week are 1,744,800 bushels, against 1,817,695 bushels last week, 1,573,740 bushels a year ago and 1,528,299 bushels in 1905. For the fiscal year to date the exports are 63,172,737 bushels, against 105,411,083 bushels in 1905-06 and 71,407,385 bushels in 1904-05.

IN CANADA.

Wholesale trade in eastern Canada is more active, as navigation has opened and shipments are heavy. Grain is moving freely from the interior. Seeding is late in the northwest, owing to cold weather. Collections in that section also drag. The coal strike in British Columbia has ended in the success of the men. Retail trade is affected by cold weather and farming operations. Failures for the week number 20, as against 18 last week and 28 in this week a year ago. Clearings for the week aggregate $85,366,433, a gain of 10.3 per cent. over last week and of 6.8 per cent. over this week a year ago.

CROP REPORTS RATHER BETTER.

WINTER WHEAT HELPED BY RAINS AND SNOW, BUT NEEDS WARMTH. GROWTH BACKWARD. COLD WEATHER RETARDS SPRING-WHEAT SEEDING. CROP LATE AND ACREAGE SMALLER. PLOWING FOR CORN GENERAL, BUT COLD WEATHER RETARDS SEEDING. ACREAGE EXPECTED TO BE LARGE, REPLACING KILLED WHEAT. BARLEY AND FLAX ACREAGE WILL ALSO BE INCREASED. HEAVY RAINS RETARD COTTON PLANTING. WARM, FORCING WEATHER NEEDED THROUGHOUT THE BELT. FRUITS NOT HURT SO MUCH AS EARLIER REPORTED.

CHICAGO. — Winter wheat has made some little progress with more favorable growing weather, but plant development is behind as compared with recent years. General condition has been reduced the past thirty days and is probably not over 80 for the entire belt. Kansas has lost, owing to freezing weather and green bugs. Warm weather has developed numbers of green bugs in Kansas, Nebraska, Missouri and Illinois. The entire belt has plenty of moisture, but warm weather is needed. Snow and freezing weather in the Canadian and American northwest has delayed seeding, and prospects are for a reduced acreage. The average time for finishing seeding in the northern part of the spring-wheat section is May 20. What seed has gone into the ground has not germinated. The condition of oats is irregular, little growth having been made the last three weeks. Plowing for corn has progressed favorably, but while more than the usual amount has been finished, planting has been retarded by cold weather. Root crops in most sections have suffered from low temperatures.

KANSAS CITY.—Reports as to the condition of winter wheat in Kansas are more favorable than for some weeks past. Weather conditions in general throughout the state have aided crops materially. The acreage has been increased in the western part of the state as compared with last year. Spring plowing is well under way.

ST. LOUIS.—Reports from the growing crops vary. In some sections much damage is said to have been done, while others report but little injury. In some parts the cold weather during April is said to have materially injured fruit crops. Early fruits and vegetables are being shipped to this market in fair quantities, and good prices are obtained for top grades, the supply being less than the demand.

OMAHA.—During the week the total snowfall over the state ranged from 4 to 14 inches, accompanied more or less by rain, which will place the soil in good condition for plowing. Very little seeding has been done as yet. Winter wheat has not made much progress, but it is still reported in good condition. Spring grain has suffered somewhat.

INDIANAPOLIS.—Crop conditions show a slight improvement, though some counties continue to report prospects as pointing to only half a crop, especially for wheat.

ST. PAUL.—Seeding and all farm work has been greatly delayed, and, although an increased acreage will be under cultivation, the wheat

acreage will be less. Seeding is not general as yet in northeastern North Dakota. Nightly frosts continue throughout Minnesota and North Dakota, retarding the growth where sown and delaying operations somewhat.

MINNEAPOLIS.—Agricultural operations are still being delayed by unseasonable weather, particularly in northern Minnesota and North Dakota. Seeding in other localities is well along, but the season is much later than last year.

WICHITA. — Crops have been benefited by general rains, but bugs are still working in wheat. Indications make the damage about 15 per cent.

SIOUX FALLS.—Cold, dry weather retards all crops, and warm rains are needed at once. Wheat and oats have been reseeded in some localities.

SIOUX CITY.—While the weather is warmer, rain is needed. Corn is being planted.

DAVENPORT.—Corn acreage is in fine condition for planting, which has already begun. Reports are conflicting regarding the damage done to early-seeded wheat, oats and barley.

ST. JOSEPH.—Wheat-crop conditions have improved over those of one and two weeks ago. The acreage about same as last year's Present conditions are favorable.

OKLAHOMA.—Depredations by green bugs continue in many localities, but substitute crops of corn and cotton will replace wheat and oats.

MEMPHIS.—Heavy rains and cold weather retard growing crops. Cotton has been replanted twice in some sections. Cottonseed is becoming scarce and prices are advancing and now range from $30 per ton upward.

JACKSONVILLE.—Crop conditions have been improved by general rains, which came too late, however, to altogether retrieve losses incident to late planting.

ATLANTA.—The fruit and cotton crops do not seem to have been so badly damaged as was at first thought.

AUGUSTA.—The condition of the cotton crop is good.

BIRMINGHAM.—Rainy weather has retarded farming operations, which are backward.

RICHMOND.—The weather has been unfavorable for planting of spring crops. In North Carolina cotton seeding is late, and considerable replanting is necessary.

MONTGOMERY. — Continued rains the past week have retarded farmers to some extent in replanting their crops, and they are also having difficulty in obtaining sound seed.

MOBILE.—Unsettled weather conditions still retard crop developments.

LITTLE ROCK.—Excessive rains have prevented farmers from making progress. Crops will be from three weeks to a month late.

NEW ORLEANS. — An excess of rainfall throughout this section has caused some damage to crops, but it is believe the outcome will show less destruction of cotton than is at present apprehended. Some districts have suffered severely, but on the whole it is thought the crop has not been affected seriously. Rice is doing well, and sugar cane is in good condition, though the fields are growing with weeds and grass.

DALLAS.—Neither cotton nor corn is doing well, and warm weather is most essential at this time.

FORT WORTH.—Heavy rain, covering almost the entire state, appears to have benefited growing crops.

WACO.—Much rain continues in this section to the detriment of cotton. Oats and corn are doing well.

PORTLAND, ORE. — Crop prospects are excellent.

SPOKANE.—The fruit crop was not damaged so much as first reports indicated. Wheat is looking fine.

TRADE REPORTS.

Business in dry goods at New York has been very steady, though demand does not equal that of some weeks ago. All classes of goods, but more especially cottons, are in request, silk and dress goods being next in favor. Cotton and woolen yarns continue scarce and dear. Raw silk, which is dull, shows a small decline in price, but no increase in demand. The cloak and suit trades are rather depressed, owing to unseasonable weather conditions. Collections are slow. The shirt waist business has also been seriously curtailed by the same cause, and manufacturers are carrying heavy stocks. Demand for men's furnishings, hosiery, knit goods, shirts, neckwear and gloves, is as strong as ever and prices continue high and firm. Wholesale notion dealers report a large volume of business, collections fair and conditions satisfactory. Eggs are still being stored and cheese is firm, but exports are small. Wholesale grocers report business unusually dull. Retail trade is fairly active. Flour receivers say sales are confined to actual needs; jobbers are unwilling to pay the price and millers are firm, while some are asking an advance. Both the live stock and dressed meat markets have been fully supplied, demand is steady and prices are firm. There has been a marked falling off in orders for glass and chinaware and collections have become slow. Business in hardware is active, but complaints of slow collections in that line are also heard. Pig iron is firm and the market shows more strength. Available stocks of pig tin are limited and some uneasiness regarding deliveries is caused by the strike of 'longshoremen. Copper is irregular and spelter is weak. Scrap metal is accumulating and the market is dull. Machinery dealers are doing an active business. Throughout the hide and leather market dullness is general. The shoe trade is also quiet, tans only being in request. Crude rubber tends downward, the fall during the past month or so being the most radical change experienced in several years. Business in jute cordage is of large proportions, and manufacturers continue to decline orders where prompt delivery is a condition. Prices are very firm and have advanced in some instances. A heavy demand for cotton duck continues, and mills are sold ahead for several months to come. Tobacco is quiet, prices are high and manufacturers are cautious about buying. Prices and collections in the paper trade are good, but there is a slight falling off in demand. Real estate is fairly active. In the building trade a number of building loans have been made, but operations under way are in many instances carried by creditors.

The following telegrams show trade conditions at the cities mentioned for the week ending May 10:

BOSTON.—Continued cold and wet weather has hurt trade in spring dry goods and wearing apparel in general. Retailers have large stocks on hand. Owing to the backward spring business collections from retailers are slow. In the jobbing market there is still some complaint as to slowness in deliveries of ginghams and other goods, which are most in demand. In some lines of manufactured cotton goods, of which jobbers have had considerable supplies on hand, sales have been effected by concessions to buyers. Textile fabrics in mostly every department hold very firm, and certain lines of shirting prints have advanced. Advanced buying for next fall, winter and spring is somewhat checked, partly by the high prices asked, and partly by a disposition to be prepared for a possible slowing up in business. Shoe manufacturers have only a normal amount of fall business on hand. While a few are well supplied and running full time, others are running on short time. Leather is firm. Grain leathers are held for full quotations, and sales keep down the stocks. Hides are firm. May buffs are held for 11 cents. Calfskins are lower. Both wood and grain alcohols are active at steady quotations. The general tone of the market for drugs is slightly weaker, but camphor continues firm. Dyes and tanning materials are moving fairly well, and prices show no material changes. Business has fallen off to some extent in house-furnishing lines, and collections are unusually slow. Jobbers of electrical goods are doing an increasing volume of business over last year, and collections are fair. Demand for lumber is fair. Builders' supplies are active at firm prices. Painters' supplies and glass are in increased demand. Copper is strong but quiet. Anthracite coal is very active owing to continued cool weather. Bituminous arrivals are heavy, but the market is quiet. Pig iron, pipe and structural steel are in active demand. Flour is firmer but demand is quiet. Pork products show some recession from recent high quotations, and a weak tone prevails in the general provision market.

PROVIDENCE.—The volume of business in the machinery and tool trades is excellent, with prices holding very firm. Cotton goods are firm in demand. In the manufacturing jewelry line business is, as a rule, in a good condition. A few houses are a little quiet but the majority are quite busy. Collections in this line are slow.

PORTLAND, ME. — Wholesale clothing, fancy goods and paint dealers report business a little dull for this season of the year. The wholesale grocery and fruit trades are about holding their own. Collections are fair.

PATERSON.—Unseasonable weather, added to strikes, has acted as a check on all retail trade. Strikes in silk mills are mainly quickly adjusted by compromise, netting operatives advances, while those in the building trades operate as a bar to activity. Locomotive mills are very busy, and all manufacturing is in good condition. Wholesale trade is complaining of freight transit delays and reports a slowing up in collections, yet average conditions are good, though not so good as they were. Summer-resort activity is in evidence, though not up to the average. However, a change of weather will stimulate matters. Building, except along speculative lines or for increasing mill capacity, is not up to the demand.

PHILADELPHIA. — Wool continues quiet and desirable stocks scarce. The textile situation has not changed much in the past week, but there is a tendency on the part of sellers to scrutinize credits more closely. The dry-goods trade has felt the unseasonable weather, and jobbers report only a fair business. Collections are fairly prompt. Flour is dull, but millers are not disposed to press sales, and the market rules firm. Chemicals and dyestuffs are dull, and the market is featureless. Demand for paints and glass is backward, owing to the unseasonable weather, but prices are firm. Lumbermen report business rather dull, but quotations continue high. Collections in all lines are reported very slow. Hides and skins have a firmer tone. Leather continues without change of moment, with occasional spurts in demand. An increased business is reported among shoe dealers, and further improvement is looked for with the advent of more seasonable weather. Tobacco is in stronger demand through the west. Sales are light in the east and in Canada. Manufacturers of cigars are very busy, working full time, but defer purchases hoping for a break in prices, which keep high. The demand for pig iron is equal to the highest period of activity, and anything like early deliveries command a premium on prices higher than for many years. In finished materials the business and prices are out of relative proportion to pig-iron conditions, and that department of the business is less active. The anthracite-coal tonnage is about the largest in the history of the business. Bituminous trade is fairly active.

PITTSBURGH.—In the pig-iron market there were no sales of any considerable tonnage reported during the week, mainly for the reason that there is very little iron to be had for delivery during the balance of the year, and what little is available is being held for old customers in most cases. Any iron for immediate delivery which may come out commands a premium, and both Bessemer and basic iron could be sold at $24 to $25 a ton at the furnaces. Orders for finished products are coming in more freely, and manufacturers are confident that the present activity will continue to the end of the year, there being a strong undertone of confidence in the situation. Coke continues weak, and prices have been still further shaded. Nominal quotations for pig iron for immediate delivery at the valley furnaces are as follows: Standard Bessemer, $24; chilled basic, $24; No. 2 foundry, $24 to $25, and gray forge, $22.15. Standard Connellsville furnace coke is quoted at $2.25 to $2.40, and foundry coke $3, at the ovens.

BUFFALO.— Favorable weather has improved sales in general trade, especially in the retail line. Navigation is fully opened, receipts and shipments of grain are active, and the live stock market is about normal, prices being steady.

BALTIMORE.—Continued unseasonable weather, practically from April 1 to date, has caused a reduced volume of sales in comparison with the same period of 1906. Dealers in men's and women's wear in the retail lines are carrying unusually full stocks. With the summer season close at hand, demands have been unusually light, and slow collections is the result. The leaf-tobacco market is quiet, with sales restricted owing to high prices demanded. Brush manufacturers are well employed, with outlook good and collections improving. In harness business is satisfactory, manufacturers are busy, values firm and collections improving. Wooden ware, crockery and tinware conditions are satisfactory, new orders being of fair volume, jobbers busy and collections improved. In paper at wholesale values continue firm, and further advances are being made in certain grades; business is active, with collections fair. Lumber is quiet; demand is said to be not so strong and mainly for the better grades, with prices fair. Hardwoods still find a good demand, with prices firm. The drug trade report a fair business out of town; local sales show some decrease. Shoe jobbers report future orders normal, collections slightly improved, with immediate business of moderate volume. May sales in dry goods and notions have been halted by the cool weather, and the advent of seasonable weather is being waited to move the stocks of the retailers, who have not sent in the customary filling-in orders usual at this period. Electrical-supply houses report a fair volume of business. Steel manufacturers and structural-iron men report a steady and full volume of business. Cotton duck manufacturers are fully engaged, and the year continues to be a prosperous one for them. Wholesale clothiers report a fair volume of fall orders but little business for immediate wants. A slight gain is noted with wholesale grocers. Turpentine is steady at 69 cents, with demand good and collections fair. General collections average slow, with a continued demand on banks, who report supply well taken.

CINCINNATI.—Business is good. Staple prices are firmer. Demand for money is very active. Bank reserves are smaller.

CHICAGO.—Jobbers report a good run of orders, mainly for future delivery, sales of dry goods being ahead of last year's. Cottons are firmly held. Retail trade has improved with better weather. Increased sales of pig iron are reported for delivery in the last half of the year. Stocks of spot iron at northern furnaces have been about cleaned up. Southern furnaces have advanced prices 50 cents to $2 per ton. At the same time there are resellers at 50 cents under asking prices. New business in finished materials is fair. Orders are in the market for 65,000 tons of steel rails and 5,000 tons of structural material. In steel sheets the question of delivery is more important than of price. Mills are closely sold up on steel bars, large consumers having placed their orders. Cotton bale ties are 5 per cent. higher. Wire and nails are not selling so freely. A more satisfactory car situation exists in the bituminous-coal trade, with demand above the average for this season. Tools and engines are bringing advanced prices to cover increased cost of raw material. Larger sales are being made by lumbermen, and prices on all woods remain firm. A good distribution of all staples exists. Potatoes and poultry are higher. Live stock prices are stronger. Receipts show good decreases. Money is easier and demand lighter. Banks are buying commercial paper freely. Collections are fair.

INDIANAPOLIS.—Wholesale trade is very satisfactory and collections are good, but retail business is slack and collections are slow, owing to the unseasonable weather that has existed.

LOUISVILLE.—Inclement weather the past month materially affected retail trade and retarded business in wholesale lines. Wholesale dry-goods houses report fair trade, but considerable complaint as to the slow movement of spring stocks. Drug jobbers report an active business, sales this year being considerably above the corresponding period of 1906. Whiskey is in demand at steady prices for three years and older. Despite weather conditions clothing manufacturers report a large fall business. Shoe dealers report a fairly good April business. Collections in most lines are very slow. Retail dealers are carrying heavy stocks of spring goods.

ST. LOUIS.—General conditions among jobbers and manufacturers are satisfactory, although rainy weather during the past ten days has done much to retard business. Spring contracts for new buildings have had a tendency to maintain prices on all grades of building material. In some lines, especially among manufacturers of ladies' waists and skirts, help is scarce, and consequently they are behind on spring orders. Retail trade, partilarly with department stores, is quiet, although during the past few days some improvement set in. Banks and trust companies report a very quiet demand for loans.

KANSAS CITY.—Sales of dry goods, boots and shoes and hats and caps continue to show good gains over this time last year. Trade in hardware, drugs, groceries and provisions is active. Retail trade, especially in spring apparel, has been slightly retarded by unsettled weather conditions. Collections are fairly good.

MILWAUKEE.—Trading in jobbing and retail lines is slightly better. Collections are fair.

SIOUX CITY.—Business is fair.

DAVENPORT.—Retail trade shows some little improvement this week, but it is not what it should be. Manufacturers are busy, but collections are only fair.

ST. PAUL.—Trade in all lines continues in advance of last year's. Collections have improved on account of May 1 payments, but they do not keep pace with the greater volume of business outstanding.

MINNEAPOLIS.—Warmer weather is needed to bring about normal trade. Though a few complaints are heard as to the present volume of business, conditions are, on the whole, more favorable than a year ago. Flour mills are very busy getting out orders that accumulated during the car shortage weeks ago, but present sales are moderate. Lumber and all building materials are in strong demand.

OMAHA.—Weather conditions are more favorable and general business shows improvement, especially in retail trade. Collections are fair.

LINCOLN.—Business in general is improving with warmer weather. Collections are fair to good.

SIOUX FALLS.—Jobbers of agricultural implements report sales in excess of last year, and other lines compare favorably, though retail trade is dull, owing to cold weather. Collections range from fair to good.

RICHMOND.—Manufacturers of trunks, bags, traveling bags and similar lines are working at full capacity, and in some instances are working night forces to supply the demand. The majority of factories throughout the district have increased their capacity. Those engaged in this line in Richmond and Petersburg, Va., have constantly increased their business until these two cities now maintain a most prominent position in this line, and future prospects are encouraging. Wholesale jobbers of dry goods and notions have had a successful season, considering the unfavorable weather conditions. Considerable sales for fall shipment have been made, but filling-in orders have been light. Retail trade is fair. Collections are backward.

CHARLESTON.—Wholesale trade is of a between-seasons character, but jobbers in dry goods, shoes, notions and hats report fall orders far above those of last season. Owing to the National Schuetzenfest which is being held here this week, retail trade is exceedingly good. Collections are slow.

AUGUSTA.—Trade, wholesale and retail, is good. Collections are fair.

ATLANTA.—Trade continues fair. Collections are also fair.

JACKSONVILLE.—Building continues active and trade is fair, but collections are slow.

BIRMINGHAM.—Southern foundry pig iron No. 2 is strong at $22.50. Little can be had for immediate shipment. The grocery trade is fair, but business in dry goods and clothing is not so good, owing to cool weather. There is a great demand for lumber. Collections are only fair.

MOBILE.—Jobbers are inclined to curtail expenses and are exercising conservatism in the extension of credit, owing principally to the rather depressed condition of lumber interests. Improvement in this branch is not expected for several months to come. Collections are slow. Retailers are doing only a fair volume. The supply of naval-store products is light, hardly equal to the demand, and prices are firm.

MONTGOMERY.—Trade, wholesale and retail, continues about on an average with that of last week. Collections are slow.

CHATTANOOGA.—Business is good in all lines. Building is active. Collections are good.

MEMPHIS.—Wet, cold weather delays wholesale and retail trade. Collections are slow.

NASHVILLE.—With more seasonable weather, trade in all lines shows decided improvement. Collections are fairly satisfactory.

OKLAHOMA.—Jobbers report good sales.

LITTLE ROCK.—Trade has improved. Collections continue fair.

NEW ORLEANS.—General trade is not so good as it should be. Retailers are doing less than last year, and jobbers report a considerable falling off in sales as compared with a year ago.

DALLAS.—Heavy rains have prevailed throughout this district, and this fact, with cool weather, is the cause of trade being almost at a standstill. Collections are quiet.

FORT WORTH.—Owing to unfavorable weather locally, retail trade is inactive. Jobbers report good business, but collections are only fair.

WACO.—Jobbers continue doing a good volume of business, but retail trade is almost at a standstill.

SAN FRANCISCO.—Industrial differences have reached their culmination in the strike of street railroad employees. Business of all kinds is stagnant without transportation or telephone facilities. Civic intervention has occurred, and may succeed in settling matters.

SEATTLE.—Building is active, but trade conditions in general can only be termed fair. Labor strikes are to some extent the cause. Money is still tight, and the real estate market, from a speculative view point, is dull, though trading in timber lands is active. Collections are fair.

SPOKANE.—Business is good, with collections fair.

TACOMA.—Great activity in railroad circles is noted. At least two transcontinental roads have secured terminals here. Business is active. Collections are fair.

PORTLAND, ORE.—Business in all lines continues good. Building activity continues.

TORONTO.—Trade and industry continue to show great activity; manufacturers are extremely busy. May 1 passed off without any serious labor troubles, although a plumbers' strike is at this moment threatened. Such an event might interfere with the building trades, which are enjoying a season of the utmost activity following upon the rapid increase of population here and the generally prosperous condition of trade. Retail trade is still somewhat delayed by cool weather. There are those, however, who do not look with unmixed regret upon this phase of conditions. Retailers are undoubtedly short in many lines of dry goods, and are unable to obtain what would otherwise be their full requirements. Wholesalers still complain of slow deliveries, and manufacturers will evidently be unable to catch up with demands for this summer's goods; values are firm. Fall and winter trade so far promises well. Ontario collections are satisfactory. Wool is quiet. Hides and skins are dull and unsettled. The demand for southern fruit is brisk and prices are generally firm.

MONTREAL.—Navigation is at last open at this port, and there is the usual resultant activity in all branches of the shipping trade. The opening was, this season, later than for many years, and an unusually large amount of goods awaited shipment. Steamers are busy taking on inland and ocean freights, and the expectation is that the season's business will be very heavy. The grain-carrying trade will be particularly so. This grain is now coming through from the west more freely than at any time since the commencement of the winter, but there are still millions of bushels awaiting shipment from the country west of the great lakes. Wholesale trade here continues exceedingly active. The general sorting trade is showing a better movement, although retail trade is still suffering from the lateness of the spring. Travellers report good orders for fall lines from all parts of the country. Orders for spring and summer dry goods are heavier than can in many cases be filled, owing to the continued slowness of manufacturers' deliveries. Hardware and groceries are now moving well. Collections from eastern Canada are generally good, while those from the west are still slow.

VANCOUVER-VICTORIA.—Trade prospects here have been much improved by the termination of the coal strike. Government intervention has resulted in an agreement which binds employers and employees for a term of two years. An increase of wages has been granted the miners. Wholesale and retail trade is active, and values in all lines hold firm. Trading in real estate is brisk at all centers of population. The shipping trade is brisk. It is reported that at New Westminster the Great Northern Railroad will establish ocean-shipping facilities. This spring has seen an advance in the cost of almost all classes of labor.

WINNIPEG.—Retail trade here and in the country is still on the quiet side, owing to the cool weather and the continued activity of farmers on the land. The wholesale sorting trade is brisk, and warmer weather will no doubt bring a heavy trade. Seeding operations have been delayed, a fact which will work against a very large increase in the crop area. Last year's crops are now moving out well, and money is showing a somewhat easier tone. Collections are slow to show improvement. Immigration is now heavier than ever before and is steadily increasing.

FINANCIAL.

Money Market.

The firmness of the foreign exchange market described in another column of this issue, this movement being the result of an international banking situation which appeared likely to lead to shipments of gold from New York to Paris, resulted in a hardening of the New York loan market. In call loans there was no particular evidence of pressure, although renewal rates were generally marked up to 2¾ per cent., or ½ per cent. above the initial figures of the week. Time money was also held with a good deal of additional firmness, the tendency of lenders being to stand out for higher figures. Borrowers on Stock Exchange collateral were not, however, in any apparent haste to take on loans for short periods, and the chief interest in the time market resided in the borrowing demand for money repayable after January 1, 1908, for which 5¼ per cent. was asked, while the bids were, as a rule, 5 per cent. at the best, this resulting in something of a deadlock so far as actual business was concerned. Commercial paper was rather quiet, though the supply is fair, and the buying demand from out of town has shown a reasonable increase.

New York Banks.

The feature of last Saturday's New York Clearing House statement was an increase of $16,902,700 in the item of loans. This was, in part, fully explained by the fact that the figures of the Fourteenth Street Bank were included for the first time in the averages, that institution having $7,020,050 of loans, while the balance of the increase was attributed to syndicate operations. The cash items displayed a decrease of $1,918,000, which was considerably in excess of the loss indicated by the estimates of the actual movement of funds for the week. The gain of $14,416,600 in deposits, however, agreed fairly well with the other items, and the reserve requirements being in consequence $3,604,150 greater the surplus reserve was reduced by $5,522,150. The figures of the statement compare as follows with those of the preceding week:

	May 4	*April 27*	*Changes*
Loans	$1,140,320,300	$1,123,417,600	I. $16,902,700
Specie	212,884,500	213,126,300	D. 241,800
Legal tenders	74,090,100	75,766,300	D. 1,676,200
Deposits	*1,120,599,900	1,106,183,300	I. 14,416,600
Circulation	50,120,300	50,069,300	I. 51,000
Total reserve	286,974,600	288,892,600	D. 1,918,000
Reserve required	280,149,975	276,545,825	I. 3,604,150
Surplus reserve	6,824,625	12,346,775	D. 5,522,150

The following table shows the bank holdings on the respective dates:

	May 4, 1907	*May 5, 1906*	*May 6, 1905*
Loans	$1,140,320,300	$1,042,110,900	$1,092,121,900
Specie	212,884,500	183,146,600	220,303,700

Foreign Exchange.

The exchange market at New York has been comparatively active this week, and has shown not a little variability. At the outset the tone was firm at a slight advance from the figures of the preceding week. The supply of commercial bills was far from being large and no finance bills seemed to be coming out. There was a general feeling, in fact, that gold exports, probably to Paris, were in prospect, and it was understood that their inception depended mainly on whether the Bank of France would allow interest on consignments of gold while they were in transit, which, however, that institution seems averse to doing at present. As the week progressed the harder tone of the New York money market had its natural effect, and caused an easing off of exchange rates which for the time being put gold shipments out of question. Later on, however, the market developed a renewed strong tone, to which the 'longshoremen's strike at New York and the interruption to export trade contributed, there being a feeling in many quarters that the supply of bills was liable to show a sharp decrease, even though it would be temporary in character.

POSTED RATES OF LEADING DRAWERS FOR LONG AND DEMAND STERLING.

May 4	*May 6*	*May 7*	*May 8*	*May 9*	*May 10*
4.84 @ 4.87	4.84 @ 4.87	4.84 @ 4.87	4.84 @ 4.87	4.84 @ 4.87	4.84 @ 4.87

ACTUAL BUSINESS BANKERS' DEMAND STERLING.

4.86.35 @ 4.86.45	4.86.45 @ 4.86.60	4.86.50 @ 4.86.60	4.86.35 @ 4.86.50	4.86.10 @ 4.86.25	4.86.20 @ 4.86.35

4.83.25 @ 4.83.50	4.83.35 @ 4.83.55	4.83.50 @ 4.83.75	4.83.10 @ 4.83.35	4.83.25 @ 4.83.40	4.83.30 @ 4.83.40

Closing quotations on Friday for actual business in other classes of bills were: Cables, 4.86.50@4.86.60; commercial bills, 4.82¾@4.83; francs, 5.20⅝ plus 1-64@5.17½ plus 3-64; reichsmarks, 94 5-16@95 plus 1-32.

The Bank of England this week made no change in its rate of discount, which remains at 4 per cent. Its weekly report showed a decrease of £172,000 in its gold, but the proportion of reserve to liability rose from 45.21 per cent. to 46.70 per cent. It was noted that the bank apparently effected a contraction of some £1,750,000 in the amount of its loans to the market. In the open market at London call money is 1½@2 per cent. and discount easier at 2 15-16@3 per cent. The Bank of France this week made no change in its discount rate, which continues to be 3½ per cent., the Paris market rate being 3¼ per cent. The institution reported a gain of 13,375,000 francs in gold for the week. At Berlin the bank rate is 5½ per cent. and the market quotation 4¼ per cent.

Bank Clearings.

[By Telegraph to BRADSTREET'S.]

BRADSTREET'S Bank Clearings Report for the week ending May 9 shows an aggregate of $2,855,497,000, as against $2,888,481,000 last week and $3,102,510,000 in the corresponding week last year. Canadian clearings for the week aggregate $85,366,000, as against $77,328,000 last week and $79,851,000 in this week a year ago. Following are the detailed returns by cities for this week and last, with percentages of increase or decrease as compared with this week in 1906:

	May 9	*Inc.*	*Dec.*	*May 2*

New York Securities Market.

Irregularity prevailed in the New York stock market this week to a very decided degree. In the earlier portion of the proceedings they were dominated by bearish feeling, or it might be called a further manifestation of the indisposition of both the public and the professional operators to take any bullish position in the absence of some assurance about the wheat and other grain crops, while the continued uncertainty about what the recent advance in Union Pacific was based on also had a similar effect. The crop news which came to Wall street was undoubtedly bearish. It seemed to indicate that not only was there a probability that the winter-wheat yield in Kansas and the adjoining states would be materially reduced, but there were also accounts of continued lateness in the opening of the season in the spring-wheat region of the northwest and a corresponding possibility of a shortage which might affect railroad earnings to a material extent. In addition to this, the money market at New York showed a tendency to become harder, on the strength of foreign exchange rates and the accompanying reports that international banking firms only awaited a decision on the part of the management of the Bank of France to allow interest on amounts of specie while in transit from New York to the French capital in order to make such transactions at a profit. Helped by a report, which it seems was not well founded, that the Secretary of the Treasury would reduce the government deposits in the national banks if there were any gold engagements for export, the money market developed a rather firmer tone, and, as is explained elsewhere, the rates for time money were decidedly firmer, while call-loan renewals advanced to the extent of about ½ per cent. Some rather unfavorable reports of railroad earnings for March also had an effect on sentiment, as the figures seemed to indicate rather clearly that the bad weather of the late winter and early spring had actually cut down revenues and had also increased the ratio of operating cost in many instances. Under these circumstances the market tended to sell off all around, and it was not until about midweek that a firmer tone became apparent, this being due to intimations that the developments in regard to Union Pacific and Southern Pacific—in other words, the two leading properties controlled by the Harriman interest—would materialize before the end of the week.

The news in the latter connection actually came out on last Thursday, after the directors of the two companies had held a rather protracted meeting. It took the form of propositions for the Union Pacific to issue $75,000,000 of 4 per cent. convertible bonds, to be sold to the stockholders of the company at 90, while in the case of the Southern Pacific, its shareholders are to be offered the privilege of buying new preferred stock to the extent of 15 per cent. of their holdings and to the aggregate amount of $36,000,000 at par. As is set forth elsewhere, this announcement fell far below the favorable talk about pending Union-Southern Pacific developments to which the street had been treated for some time before, and as a result, on Thursday afternoon the whole market broke rather severely under the lead of Union Pacific. Practically all classes of stocks were more or less affected. The market on Friday showed, however, a better tone, although the activity was restricted and professional in origin. At the same time the elimination of the mystery which has surrounded the Harriman stocks for some time back seems calculated to limit the dealings and also to cause the professional element to transfer its attention to other parts of the list. The government wheat-crop figures for May 1 caused a weaker tone in the final transactions.

Boston Stock Market.

Statistical Situation of Cotton.

Following will be found the movement of cotton into sight for the week and season, as compiled by the New York Cotton Exchange:

	This week	*Last week*	*Last year*
Week	81,650	95,169	88,435
Season	12,748,144	12,664,679	10,150,469

New York's Foreign Trade.

IMPORTS.

	1907	1906
Dry goods	$2,950,779	$2,707,933
General merchandise	14,719,525	11,604,540
Total week ending May 4	17,670,304	14,312,473
Previously reported	295,322,155	255,311,396
Since January 1	312,992,459	269,623,869

EXPORTS.

	1907	1906
Exports week ending May 4	$11,557,606	$13,326,432
Previously reported	217,904,306	224,793,449
Since January 1	229,461,912	238,119,881

Boston Shoe and Leather Market.

Leather is steady, with prices firmly held to full quotations. This, apparently, is due rather to business anticipated than to the volume of current sales. There are no accumulations of sole leather sufficient to unsettle prices. There is more inquiry for grain leather, but sales are in moderate lots. Patent leather is reported very quiet by some houses, but others report that they are taking a good volume of new orders, and are still behind on old contracts. Hides are stronger. May take-offs in buffs are held for 11 cents. Calfskins have declined, and New England skins are fully 5 cents lower than a week ago. India-tanned sheepskins are firmer. The situation among the shoe manufacturers does not change. Brockton factories are said, as a rule, to be well supplied with orders, but, as a whole, the amount of business in hand is only fair for the season. It is still the opinion of manufacturers that orders will come more freely later. The *Shoe and Leather Reporter's* figures this week are as follows: Last week, 98,472 cases; preceding week, 95,599; last year, 95,693; total for 1907, 1,709,699; total for 1906, 1,753,338; decrease, 43,639.

Boston Wool Market.

The local market remains extremely quiet, and the deadlock between buyers and growers continues in western markets. Latest advices state that low wools, which declined in London, were faulty and defective, and that low wools suitable for America are on a parity with the prices at the previous sales, but, at the same time, as good low wools are in small supply at the sales, it is highly probable that but few lots will be obtained for this country. A few scattering lots have been sold during the past week, including new Arizona at 23½@24 cents for fine and fine medium, and 26@27½ cents for half bloods, some fall Texas at 21 cents, and small lots of scoured territories. Some fine merino foreign wools have sold at 43½@44 cents for 64s to 70s, fine wools being very strong and low wools weak. In Texas the condition of the clips is irregular, and some clips are being consigned. New California wools are of good quality, and sold at the Red Bluff sales at 24@25 cents, the same as last year. In Wyoming the wools are very poor, and growers are consigning clips. Utah new wools are selling there at 18@20 cents; Nevada is well cleaned up by contracts; in Idaho contracts are being made at 18 cents, but nothing is doing in Oregon or Montana. It is understood that the leading interest has withdrawn its offer of 30 cents for the quarter-blood fleeces remaining in Boston, but a sale of 200,000 pounds was made at that price during the week. The London sales are still going on, with very large withdrawals, and as wools suitable for this country are very firm, it is not likely that the American buyers who are present will secure many lots.

COMPARATIVE PRICES OF 107 COMMODITIES.

Quotations ruling for standard grades at the low point in 1896, the succeeding high point in 1900, the succeeding low point in 1901, and the generally high records reached since then:

* Nominal. Mills have withdrawn quotations, and therefore prices are quoted "at value." † Hard Republic Specular.

WHEN AN ADVANCE IS NOT AN INCREASE.

The *Railway Age* says: "'The idols of the market place,' wrote Francis Bacon, 'are the most troublesome of all—those, namely, which have entwined themselves round the understanding from the association of words and names. For men imagine that their reason governs words, whilst, in fact, words react upon the understanding; and this has rendered philosophy and the sciences sophistical and inactive.' In truth, all experience shows that to the vast multitude names and words are symbols which carry with them certain implications of good or evil that, once these names or words are accepted as attaching to things, are conclusively presumed to characterize the things themselves. 'Rosebush' and 'thorn bush' are names which might easily be applied to the same plant, but if the average man had a gardener and should receive from him a report of the discovery of a new variety of the second he would order it grubbed out, while if one of the first was reported, the direction would be to tend carefully and to preserve and propagate.

"It is strange that suggestions of this sort have not impressed themselves upon the men who are charged with the management of American railways. With the whole world passing through a period of adjustment to a rapid change in the value of standard money, prices and wages everywhere have been rapidly changing to meet the new conditions. The farmer has had to obtain more dollars for his wheat, corn, cotton, pork, hay or potatoes, because each dollar he received would buy less than before. If he receives now $1.50 for wheat which a few years ago he would have sold for $1, but the $1.50 will now buy no more, in clothing, kerosene, coal, furniture or in farm labor, than the $1 would buy, there has been no real advance in his prices. If it will buy less there has been an actual decrease.

"The same principle applies to the railways. If the average receipts per ton-mile of 7.66 mills obtained in 1905 bought no more in labor or materials than the 7.24 mills received in 1899 there was no real increase in rates between those years. If the rates of the latter year actually bought less in labor and materials there was a very real decrease in rates. This was well expressed by President Hadley, of Yale University, who stands easily first among American students of railway transportation, when he said: 'The average increase in rates is apparent only and not real. If the price of goods carried and wages of railroad laborers and the cost of materials of railroad construction and operation have increased from 10 to 40 per cent., an increase of apparent charge of 5 per cent. on the part of the railroads is virtually a tremendous and gratifying decrease.'

"Now every one knows that this is precisely the thing which has happened. The rise in the cost of labor and materials has been very great; the rise in the price of railway services has been relatively insignificant. What has happened, then, has been 'virtually a tremendous and gratifying decrease.' But why, in the name of all that embodies a complete and proper understanding of the business in which they are engaged, should railway managers describe as an increase in rates and defend as an increase what is really 'a tremendous and gratifying reduction.' If the rise in the cost of labor and materials has been so great that they are at last forced to attempt a readjustment of rates by which they may put upon traffic a small fraction of the burden of this rise, is it not worse than folly to call the necessary readjustment by the misleading name of 'increase?'

"That railway services cost less when measured by the charges made to the public and when these are changed into terms which express the purchasing power of the labor or commodities with which purchasers of transportation obtain the wherewithal to pay these charges is susceptible of statistical demonstration. So, also, is the fact that the railways have now to perform much more service in order to pay for the same quantity of labor or materials. Thus, measured by gross earnings or by ton-miles of freight service plus passenger-miles of passenger service, the work done by the railways has, in the aggregate, grown much less rapidly than the cost to the railways of doing it. This is shown by the comparisons which follow:

	P. ct. inc. 1899 *to* 1905
Work done:	
Gross earnings	58.53
Tons of freight carried one mile	50.78
Passengers carried one mile	63.11
Cost to the railways:	
Operating expenses	62.27
Wages and salaries	60.61
Fuel for locomotives	102.66

"A more conclusive test is applied by ascertaining the amount of revenue secured by the expenditure of a given sum for a particular purpose in each of the years compared. For example, for each $100 of operating expenses in the year 1899 the railways were able to carry 14,431 tons of freight one mile, for which, at the average rate of that year, they obtained $104.48 in revenue. In 1905, however, each $100 of operating expenses provided for carrying but 13,409 tons of freight one mile, a decrease of 7.08 per cent., and at the average rate of 1905 this brought in only $102.71, a decrease of 1.69 per cent. These and other comparisons are here tabulated:

RESULTS OBTAINED FOR EACH $100 EXPENDED FOR OPERATION.

	1889	1905	*P. ct. dec.*
Tons of freight carried one mile	14,431	13,409	7.08
Passengers carried one mile	1,703	1,711	*.47
Revenue from freight	$104.48	$102.71	1.69
Revenue from passengers	$33.69	$33.57	.36
Revenue from freight and passengers	$138.17	$136.28	1.37

RESULTS OBTAINED FOR EACH $100 EXPENDED FOR WAGES AND SALARIES.

Tons of freight carried one mile	23,647	22,199	6.12
Passengers carried one mile	2,790	2,834	*1.58
Revenue from freight	$171.20	$170.04	.68
Revenue from passengers	$55.19	$55.60	*.74
Revenue from freight and passengers	$226.39	$225.64	.33

RESULTS OBTAINED FOR EACH $100 EXPENDED FOR FUEL FOR LOCOMOTIVES.

Tons of freight carried one mile	160,217	119,200	25.60
Passengers carried one mile	18,904	15,215	19.51
Revenue from freight	$1,159.97	$913.07	21.29
Revenue from passengers	$373.92	$298.52	20.16
Revenue from freight and passengers	$1,533.89	$1,211.59	21.01

*Increase.

"Obviously these computations exclude any allowance for the greater proportionate share of the cost of transportation that is now borne by capital or for the economies in the utilization of labor and supplies due to improved operating methods and superior organization. Yet, even without taking these items into the calculation, it is seen that there is still a wide margin for the adjustment of rates before the reduced purchasing power of the money in which charges are paid will have been offset. And until this margin has been fully occupied by the readjustment no change can really be considered an increase in rates."

Think!

Think of the number of typewriters that seemed popular a few years ago.

Think of the different ones seeking public favor to-day.

Then think of the Remington, which has been the standard since typewriters were invented, and which maintains its supremacy solely through enduring merit.

The man who *seeks* experience may seek it anywhere, but the man who *heeds* experience buys the

Remington

Have you tried the new Remington escapement? It will be a revelation to you of the latest and best in typewriter achievement.

BRADSTREET'S

PUBLISHED WEEKLY BY

THE BRADSTREET COMPANY,

NOS. 346 AND 348 BROADWAY, NEW YORK.

Berlin, 23 Charlotten-Strasse.
London, 137 Cheapside, E. C.
Melbourne, 231 Flinders Lane.
Paris, 20 Boulevard Montmartre.

TERMS: $5.00 PER YEAR IN ADVANCE.
Remit by Express Money Order, Draft, P. O. Order or Registered Letter.

Communications regarding editorial matters should be addressed to the Editor; all others to the Publishers.

ENTERED AT THE POST OFFICE AT NEW YORK, N. Y., AS SECOND-CLASS MATTER.

SATURDAY, MAY 18, 1907.

All signs seem to indicate that the spirit of speculation, for various reasons discouraged from seeking an outlet in the stock market, is turning eagerly toward the commodity markets, particularly those for grain and cotton. The month of May has seen the broadest speculation in wheat known since the great Leiter boom of 1898, and this week has witnessed some really remarkable advances in prices. This is based entirely upon the well ascertained fact that the winter-wheat crop was badly injured in April, that the spring-wheat seeding situation is really critical, and that abroad, as well as at home, the present outlook does not favor liberal yields of the world's premier cereal. Last week saw a heavy advance in wheat prices, 6@7 cents on leading options, and the present week opened with an immense rise, 5 cents between Saturday's closing and Monday's opening, and a degree of excitement only equaled in the excited movements of May, 1905, and May and June of 1898. This advance, coupled with better weather reports from the west and northwest, caused heavy realizing and invited bear selling, insufficient, however, to check the bullish fever, which manifested itself in a further heavy rise of 5 to 7 cents on Thursday. The net result has been a gain in prices of 10 to 11 cents on leading options for the week, of 14 to 15 cents since May 1, and a rise of 20 to 21 cents from the price paid on April 1, when bad crop and weather reports began to be noted. From the low price of the year touched for cash wheat at New York, early in January, there was a rise of 24 cents. Following the last great rise on Thursday, prices on Friday eased 2 cents, but regained this loss and closed 2 cents higher with the spirit of bullishness unimpaired.

It might be noted that foreign markets have shared in the excitement to some extent, but toward the close the advance here was so rapid as to outstrip the movement abroad, thus checking all export business. On Monday, May 13, cash wheat at Liverpool and at New York sold at $1.02; Berlin, 96 cents, and Paris, 82 cents. Foreign crop news this week, as for a month past, was hardly much better than our own, much damage being reported as a result of the cold, backward spring in Europe, which, as in our own country, has reduced crop promise so that both Europe and America report a probable smaller outturn than a year ago. Cold weather west, frosts as far south as Oklahoma, and snow in the northwest and in Canada, were phenomena of the week. It is hardly to be denied that the recent advance in prices has discounted a great deal of damage. Present prices of spot wheat are 11 cents above those of a year ago, and compare with a high price of 96⅛ cents and a low price of 77⅛ cents, touched in 1906, in January and August respectively. Chicago reports are that the professional speculative element turned and fought the advance on Monday and again on Thursday, but with slight effect. Something similar, though on a smaller scale, has occurred in the market for coarse grains, crop-damage talk affecting oats, and cold weather being reported as retarding corn planting, with the effect of advancing those grains 1½ and 4½ cents respectively. Cotton, too, has advanced on poor crop reports, old-crop futures gaining 30 points and new-crop 50 points, while spots are 15 points higher. Cotton spots are now 115 points above the low price of the year, touched early in April, and 5 points above the price of a year ago.

Something in the nature of a sensation was created for a time on Wednesday afternoon by the publication of a dispatch from Washington purporting to give the substance of some drastic conclusions reached by the Interstate Commerce Commission regarding the management of the so-called Harriman railroads, investigated by the commission some time ago. These conclusions involved the suggestion that proceedings be instituted by the Department of Justice for violations of the anti-trust law, coupled with recommendations for legislation prohibiting the inflation of securities or the purchase by one railroad of the shares of another. It was learned later in the afternoon that the document referred to in the dispatch was not a report of the Interstate Commerce Commission, but a summary of some suggestions made by the counsel for that body in the closing argument submitted about six weeks ago. The commission itself, as is made plain in a published statement, has not yet prepared a report upon the subjects covered in its investigation, and its probable conclusions cannot yet be indicated. It is understood, however, that the matter will be considered by the commission at an early date.

The construction of the eight-hour law of 1892, which limits the employment of laborers and mechanics on public works to eight hours a day, was involved in a number of cases decided by the Supreme Court at Washington this week. There seemed to be no doubt in the mind of the court as to the constitutionality of the legislation, but there was a difference of opinion upon the principal point involved in the cases, that, namely, as to whether the law was applicable to men employed on dredges in river and harbor improvements. Mr. Justice Holmes, speaking for the majority of the court, said that the men so employed were not laborers or mechanics within the meaning of the law, but were seamen to whom the law was not applicable. The decision will untie the hands of the War Department, which has held up most of the contracts for river and harbor work authorized by the last Congress, pending a decision upon the cases.

Turkey seems at last, after much delay, to have yielded to the demands of the United States government for equal treatment for American interests. A dispatch from the ambassador at Constantinople announces that the Porte has ordered the execution of certain formalities in relation to registry, etc., to carry into effect the principle already settled of treating American establishments and institutions in Turkey on the same footing as those of other nations. Orders have been transmitted to the Vilayet of Angora to prevent the local authorities from raising objections to the construction of new buildings for the school and dispensary at Talas. The customs authorities in Syria and at Salonica have been directed to grant to existing American establishments the same customs immunities enjoyed by similar foreign establishments, and finally the restrictions against the introduction of cotton-seed oil have been ordered to be removed, except in the case of impure or adulterated oils. The process of arriving at an accommodation has been slow and somewhat tortuous, but it has at last resulted effectively.

Last year the Court of Appeals of Kentucky had before it certain proceedings instituted by that commonwealth against the Adams Express Company on the ground that the company was using the privileges of interstate carriers to ship liquor into the state and sell it contrary to state law. It was alleged that the whiskey in question had been shipped from Cincinnati, Ohio, to two counties in Kentucky, in the absence of any order from the consignee and of any knowledge by the purchasers as to the identity of the shipper. The commonwealth officials contended that the fact that the company held the goods, informed the consignees and collected the price under those circumstances, practically put it in the position of a vendor of liquor and made it subject to a state law prohibiting such traffic. The express company argued that it was a common carrier obliged under its contracts to make collections on c. o. d. packages, and that as the packages were brought into Kentucky from Ohio, any prohibition of the business under state laws was an interference with interstate commerce. The Kentucky Court of Appeals decided against the express company, but its decision was reversed this week by the Supreme Court of the United States, which held that the transaction was one of interstate commerce and therefore not subject to state regulation.

During the last few weeks the fate of the Russian Duma has seemed to rest, to an even greater degree than before, in hands other than its own. It was rumored some time ago that the policy of the powerful Socialist party toward the Duma would be determined at a secret congress to be held at some place not definitely known, and such a congress seems to have met for a time in Sweden and has been in session lately in London. Meanwhile, a congress of reactionists, as they are called, has been meeting in Moscow, one of whose demands involves the dissolution of the Duma. A report now comes from continental sources to the effect that British influence has been potent in preventing the dissolution of the Russian parliament even before this.

With its Sultan endeavoring to put France off with dilatory and unacceptable responses to its demands, thus inviting invasion, and the condition approaching anarchy brought about by the outbreaks of the tribesmen, Morocco has been an undesirable place for peace-loving people of late. It is now announced that the Sultan has decided to comply with the French demands for reparation for the murder of Dr. Mauchamp. Reports from India are to the effect that while disturbances there have ceased under the pressure of prompt governmental action, there are indications of marked unrest among the Hindus. With a view of checking the spread of discontent political meetings have been prohibited except by permission of the proper officials. The Nicaraguan congress has approved the treaty of peace arranged between Nicaragua and Salvador at Amapala. The first election in Austria under the new universal suffrage law has been marked by the refusal of large numbers of the electors to vote, though the law is compulsory.

RAILWAY GROSS EARNINGS SHOW HEAVY GAINS.

While a long time has elapsed since railway gross earnings showed a decrease, the tendency of those returns in the months of November, December, January and February last was of such a character, rather small increases being reported, that many observers gained the impression that a retrograde movement was setting in. With the passing of March, however, that conception received somewhat of a setback, and the April returns are well calculated to induce an optimistic feeling, the gain for the month, as compared with April, 1906, being no less than 16 per cent., which ratio is the largest reported in any month since February last year. Of course, in analyzing the returns one should recall that traffic conditions in April, 1906, were affected more or less by the labor disturbances then existing in the bituminous and anthracite coal fields, although gross earnings for that month showed an increase of 11.7 per cent. over the figures for the corresponding month in 1905, for many of the roads without the troubled zone furnished heavy gains. On the other hand, matters in April the current year were more propitious. In the first place traffic congestion, due either to the immensity of business or adverse weather conditions which prevailed prior to April, was lessened considerably; old tonnage long held back was sent forward at a comparatively rapid rate; the supply of cars improved; deliveries from manufacturing plants quickened; shipments of wheat to primary markets expanded over 100 per cent. as compared with April last year; the movement of corn increased nearly 50 per cent., while that of oats advanced 15 per cent.

In view of the foregoing factors it is not surprising to find that the railways piled up quite heavy increases in April. Thus the total for all roads so far reporting is $79,282,674, the gain being $10,965,686, or 16 per cent., as we have heretofore stated. That ratio of increase indicates that earnings in April last were the best on record, the actual volume of gain—$10,965,686—being the largest reported since February, 1906, while the ratio of increase—16 per cent.—follows an increment of 11.7 per cent. in April last year, 8.7 per cent. in 1905, 4.5 per cent. in 1904, 14.3 per cent. in 1903, 11.2 per cent. in 1902, and 8.9 per cent. in April, 1901. Thus the record of increase for April is a cumulative one. Moreover, every section of the country contributes a liberal share to the total volume of increase. This statement is corroborated by the following table, which exhibits the returns for April, 1907 and 1906, with the ratio of advance shown:

	1907	1906	*Inc.*
Northwestern	$8,223,906	$7,123,572	15.4
Central-western	14,090,239	12,076,518	16.6
Trunk lines	18,678,887	16,088,249	16.0
Southern	13,071,168	12,722,037	9.8
Southwestern	10,154,316	8,329,455	21.9
Pacific	14,164,158	11,977,157	26.6
Total	79,282,674	68,316,988	16.0

A glance at the above table displays very heavy gains. For instance, the Pacific roads show an increase of 26.6 per cent., the southwestern lines 21.9 per cent., the central-western 16.6 per cent., the trunk lines 16 per cent., and the northwestern, on which traffic had been tied up by snow blockades, contributes an advance of 15.4 per cent. The southern roads show the smallest increase—9.8 per cent.

What might be termed the monthly swing of gross earnings is set forth in the following, which carries comparisons back to 1901:

	1907 *Inc.*	1906 *Inc.*	1905 *Inc.*	1904 *Dec.*	1903 *Inc.*	1902 *Inc.*	1901 *Inc.*
January	2.4	19.4	6.1	3.8	10.1	7.6	8.1
February	2.0	25.6	†2.7	*.2	13.5	3.9	7.6
March	8.0	9.5	10.3	.05	14.5	6.7	7.4
April	16.0	11.7	8.7	4.5	14.3	11.2	8.9
May	..	14.7	9.5	3.5	12.0	9.0	9.2
June	..	13.3	6.3	.6	14.1	8.1	6.8
July	..	14.1	7.4	1.4	12.3	7.5	13.3
August	..	13.1	5.1	*3.4	9.4	4.6	13.2
September	..	9.3	6.3	*4.0	7.9	9.6	10.5
October	..	11 2	5.9	*4.0	5.5	6.6	11.8
November	..	4.6	9.1	*9.9	4.0	7.2	12.1
December	..	5.7	9.9	*8.0	4.6	9.4	5.5
Year	..	12.7	6.9	*1.4	11.5	8.0	10.5

*Increase. † Decrease.

Many of the individual roads return very heavy gains over April, 1906. Thus in April last the New York Central showed an increase of $1,352,175, which is almost two and three-fourths times larger than the increase scored by the same road in the entire first quarter of the calendar year. Heavy gains are also reported by the Northern Pacific, $1,158,701; by the Canadian Pacific, $846,000; by the Great Northern system, $750,641, and by the Missouri Pacific, $647,000. A good sidelight on this phase of the subject is furnished by the following table of leading increases over April, 1906:

New York Central	$1,352,175
Northern Pacific	1,158,701
Canadian Pacific	846,000
Great Northern system	750,641
Missouri Pacific system	647,000
Grand Trunk	507,655
Missouri, Kansas & Texas	485,256
Louisville & Nashville	465,642
Illinois Central	440,980
Buffalo, Rochester & Pittsburgh	419,283
Cleveland, Cincinnati, Chicago & St. Louis	342,358
Michigan Central	325,408
Wabash	316,881
Southern	311,367
Texas & Pacific	269,365
Lake Shore & Michigan Southern	224,201
Minneapolis, St. Paul & Sault Ste. Marie	190,850
Denver & Rio Grande	182,300
Wheeling & Lake Erie	153,207
Mobile & Ohio	145,301
Colorado & Southern	132,609
St. Louis Southwestern	122,297
International & Great Northern	122,000
New York, Chicago & St. Louis	121,199
Western Maryland	87,156
Chicago, Indiana & Southern	78,683
Central of Georgia	66,712
Total	10,326,224

Returns for identical roads for the elapsed portion of the fiscal year are given in the appended table:

	1906-07	1905-06	*Increase*	*P. ct.*
July	$80,800,673	$70,805,720	$9,994,953	14.1
August	78,771,383	69,593,637	9,177,746	13.1
September	79,270,463	72,521,836	6,748,627	9.3
October	86,650,834	77,911,337	8,739,497	11.2
November	86,812,493	82,983,127	3,859,366	4.6
December	83,007,304	78,548,032	4,459,332	5.7
January	69,909,545	68,272,841	1,636,704	2.4
February	61,847,147	60,613,077	1,234,070	2.0
March	76,623,443	70,915,286	5,708,157	8.0
April	79,282,674	68,316,988	10,965,686	16.0
Ten months	783,006,019	720,481,881	62,524,138	8.6

The increase for the ten months' period is $62,524,138, or 8.6 per cent., the banner month as regards the volume of gain being April, 1907.

CENTRAL AMERICAN CONDITIONS.

The threatened break between Mexico and Guatemala which at one time seemed dangerously near has not occurred. Information was received by the State Department at Washington at the close of last week that the difficulty arising over the refusal of Guatemala to permit the extradition of General Lima had been settled by the action of Mexico, which decided not to persist in its demand and not to sever diplomatic relations with the Central American republic. The Mexican authorities decided, however, to send their minister in Guatemala to Salvador, leaving a consul to attend to the affairs of the republic in Guatemala, and not to give the latter's minister to Mexico his passports. At the same time it was announced that further exchanges of a diplomatic nature were in progress between the governments of the two countries. A few days later cable dispatches announced that in replying to Mexico's third note Guatemala had receded from the stand previously taken by it in relation to the extradition of Lima. It seems that President Cabrera expressed his willingness to have Lima tried in Guatemala on the charge of complicity in the assassination of General Barillas, but the Mexican government replied that the proposition came too late.

Such information as is available seems to indicate that Mexico's treatment of the situation, determined upon before the receipt of Cabrera's reply to its third note, was based upon the desire of the Mexican government to act with a magnanimity becoming to the stronger party, a course commended unofficially, as it seems, by Secretary Root and Assistant Secretary Bacon. It has been suggested also that an additional influence affecting the action of the Mexican government was the apprehension that a rupture between Mexico and Guatemala would jeopardize permanent peace in Central America, which is looked for as a possible outcome of the coming conference in Nicaragua. A statement was made public at the beginning of the present week to the effect that President Diaz, of Mexico, had declared in an interview in favor of the amalgamation of all the Central American countries, under a man of enough strength of character and honest common sense to hold in check the revolutionary spirit which has done so much to retard progress in that sorely tried part of the continent. In this statement President Diaz was quoted as adding that while Mexico wanted no acquisition of territory, it would be willing to coöperate with the United States in a protectorate over the Central American states or federation with a view of helping them.

President Diaz has since declared that he did not propose either a protectorate over, or a federal union of, the Central American states. As far as the United States is concerned, it may be said, we think, that any idea of such a protectorate would not be entertained at Washington. The notion of a union or federation between the Central American republics is not, however, a new one. It has been repeatedly suggested as furnishing the best if not the only prospect of escape from well-nigh intolerable conditions, and at the present moment it seems to be in the air. It is possible that it may be brought about as the result of the conference to be held in Nicaragua. It may be, however, that the end sought will not be reached without a struggle, and there are indications that events are now preparing which will clear the ground in a most decisive way for the action of those in favor of federation. There are rumors of a forthcoming effort to unseat President Cabrera, of Guatemala, by means of a revolution, assisted by the chief executives of Nicaragua, Honduras and Salvador, the first-mentioned of whom, Zelaya, is looked upon as a promising candidate for the presidency of the federation in case one should be formed. Whether a union can be brought about is for the present uncertain, but the tendency of events is in that direction, and in it, doubtless, the ultimate destiny of Central America is to be found.

APRIL AND TEN MONTHS' TRADE.

Examination of the full details of export trade for April shows what a relatively small influence was exerted upon the trade as a whole by the shipments of what have been in the past termed the leading classes of exports. Thus the total exports of all kinds of merchandise in April were valued at $157,454,631, a decrease of 2 per cent. from March, but a gain of 9 per cent. over April a year ago. Of this amount, the exports of breadstuffs, provisions, animals, mineral oils and cotton combined contributed only $75,549,898, or 47 per cent., and the aggregate gain of these exports over a year ago was only $3,700,469, a gain of only 5 per cent.; whereas the exports of other products were valued at $81,904,733, 53 per cent. of the whole, and a gain over April a year ago of $9,374,122, or 13 per cent.

The total values of the imports and exports of the United States for April and for the ten months of 1907 compare with the same periods of the two preceding years as follows:

April	1905	1906	1907
Imports—Free of duty	$44,686,684	$46,813,205	$58,027,936
Dutiable	50,423,604	60,504,876	71,251,364
Total	95,110,288	107,318,081	129,279,300
Exports—Domestic	125,360,998	141,046,383	135,305,092
Foreign	3,214,376	2,433,657	2,149,539
Total	128,575,374	141,380,040	157,454,631
Excess of exports	33,465,086	37,061,959	28,175,331
Ten mos. end'g April			
Imports—Free of duty	438,629,746	458,292,484	541,103,684
Dutiable	495,910,656	562,580,694	654,023,817
Total	934,540,402	1,020,873,178	1,195,124,501
Exports—Domestic	1,251,648,216	1,466,825,110	1,587,920,027
Foreign	21,966,395	21,457,020	20,426,003
Total	1,273,614,611	1,488,282,130	1,608,355,030
Excess of exports	339,074,209	467,408,952	413,230,529

The imports for the month of April, it will be seen, aggregated $129,279,300, a gain of 20 per cent. over April a year ago, and the excess of exports over imports for the month was only $28,175,331, against $37,061,959 a year ago. For ten months of the fiscal year the exports aggregated $1,608,355,030 and the imports $1,195,124,501, gains of respectively 8 and 17 per cent. over the corresponding period one year ago. The excess in favor of exports this year is found to be $413,230,529, as against $467,408,952 one year ago.

Export trade in leading products, as intimated above, was rather irregular in April, with the gains or losses, as compared with the same month a year ago, limited to small dimensions. As for some time past, the leading feature was the excess shown in cotton shipments over April, 1906, but it might be noted that the gain was very slight in comparison with the increases shown in recently preceding months. This gain, however, was sufficient to explain the entire increase over April, 1906, in the exports of these products. There were, it is true, gains shown in breadstuffs and mineral oils, but these were more than counterbalanced by decreases in exports of provisions and animals, leaving cotton shipments to furnish, in fact, more than the entire gain shown in these five classes of exports. The following table shows the values of the shipments in leading lines of export during April this year and last:

	1907	1906	*Changes, p. ct.*
Breadstuffs	$14,700,892	$13,079,594	Inc. 12.3
Meats and dairy prod	14,711,015	16,366,772	Dec. 9.8
Animals	3,152,612	3,831,903	Dec. 17.7
Cotton	35,946,384	31,779,455	Inc. 13.1
Mineral oils	7,038,995	6,791,705	Inc. 3.6
Total	75,549,898	71,849,429	Inc. 5.1

Breadstuffs exports, it will be seen, gained 12.3 per cent., while cotton exports gained

13.1 per cent. and mineral oils only 3.6 per cent. Provisions exports, on the other hand, lost 9.8 per cent., and exports of animals decreased 17.7 per cent. from a year ago. The five lines of export combined gained only 5.1 per cent. In breadstuffs, the shipments of corn, wheat and wheat-flour all increased, while those of barley and oats fell to the vanishing point. In provisions exports the features were the loss in canned beef, bacon, lard and dairy products, all but the first of which were no doubt due to the high prices demanded. Exports of fresh beef, tallow, hams and pork increased. The gain in illuminating oils explains the increase in petroleum products. The exports of leading products for the ten months make the following comparisons:

	1907	1906	*Changes, p. ct.*
Breadstuffs	$145,004,697	$159,348,553	Dec. 8.3
Meats and dairy prod	150,602,044	160,691,765	Dec. 6 2
Animals	27,926,897	33,719,153	Dec. 17.1
Cotton	449,176,605	365,721,611	Inc. 23.0
Mineral oils	66,021,721	67,370,545	Dec. 1.9
Total	839,631,964	786,851,627	Inc. 6.7

The gain in cotton is the one favorable feature in the above table, more than offsetting decreases in breadstuffs, meats, dairy products, animals and oils.

The details of exports of breadstuffs, animals, meats, dairy products, mineral oils and cotton for the month of April and for the ten months ending therewith compare with similar returns for a year ago as follows:

	APRIL. Quantities		Values	
Breadstuffs	1907	1906	1907	1906
Barley, bush	5,105	967,655	$3,100	$438,606
Corn, bush	9,545,646	8,911,901	5,046,446	4,684,315
Cornmeal, bbls	62,060	41,233	178,605	125,311
Oats, bush	123,588	4,230,060	60,772	1,552,955
Oatmeal, lbs	3,713,054	4,379,783	92,934	108,184

The export price per pound of cotton in April this year was 10.8 cents, as against 11.3 cents in April, 1906, while for eight months of the regular cotton year the export price per pound was 10.6 cents, as against 11.1 cents in the preceding year.

RUMORED NEW ENGLAND RAILROAD CONSOLIDATION.

Despite official denials of a decidedly emphatic nature, the past week has been prolific of intimations that a very important change was pending in the railroad situation in the eastern states. Putting the matter in its broadest form, it was stated that negotiations were on foot, or, as some of the newspapers had it, actually completed, whereby the New York, New Haven & Hartford Railroad Company was about to acquire control of the Boston & Maine Railroad, or would, at least, take a lease of that property, thus placing the two largest railroad concerns of the New England states, which in fact cover practically the entire territory of the five eastern commonwealths, in the hands of one great concern.

The New York, New Haven & Hartford system, including the Central New England and the New York, Ontario & Western railways, comprises at present 2,800 miles of lines, of which something over 600 miles are outside of the New England states. The Boston & Maine comprises 2,287 miles, which includes a certain amount of mileage belonging to its leased line, the Fitchburg Railroad, situated in the state of New York. It also controls the Maine Central Railroad system of 8,162 miles, and with other branches has a total mileage of nearly 3,300 miles.

Outside of these companies there are practically no important railroads in the New England states except the lines leased to the New York Central, which consist of the Boston & Albany and the Rutland Railroad, the two latter aggregating some 780 miles, and the Central Vermont, which is controlled by the Grand Trunk of Canada, and which has a total mileage of 536 miles. There are, of course, some small unimportant lines, but of the total mileage of railways in the New England states, the New Haven and the Boston & Maine own and control something like 90 per cent.

The stories on this head have been in each way most positive. The newspapers at the beginning of the present week contained statements, supposed to emanate from large stockholders of the Boston & Maine Railroad, to the effect that the deal had gone through. On the other hand, President Mellen of the New Haven issued a comprehensive denial covering the past, present and future, to the effect that there had been no consideration on the part of his company of any arrangement with the Boston & Maine, whether by purchase, lease or otherwise, and that there was no chance of any such transaction being considered. At the same time both Wall street and State street seem to be fully under the impression that negotiations, either formal or informal, have been in progress looking to the bringing of the Boston & Maine under the control of the New York, New Haven & Hartford, the further allegation being that the eastern trunk line, which would have a considerable interest in such a transaction, had withdrawn their opposition thereto. It was, moreover, pointed out that the lines of the two systems are connecting and mutually supplementary, the parallel and competing portions thereof being in the main for short distances, without involving any serious conflict with the provisions of the Interstate Commerce law or the Sherman act, which would have a bearing upon such subjects.

At the same time a great deal of adverse criticism has been aroused. The commercial interests of the New England states seem to be in the main adverse to any merger of the above character. It is claimed that a combination of this character would place the business interests of the eastern states at the mercy of one corporation, and it is also pointed out that the Massachusetts laws forbid the acquisition of the stock of one domestic corporation by another, unless the arrangement be legalized by the commonwealth.

THE STEEL-RAIL QUESTION.

Not a little public interest has been aroused by the discussion which is now going on regarding the responsibility for railroad accidents due to defects in rails. It has been widely claimed that an increased proportion of the recent accidents on the railways of the country, serious or otherwise, have been due to the breaking of rails, and the number of instances in which defective rails, discovered after they had been placed on the tracks, and therefore capable of producing disasters, have come to light, has been very large. This question has been brought before the country in a concrete shape by the announcement made after a meeting of the Union Pacific board of directors, less than a fortnight ago, in which the president of that corporation, Mr. Harriman, called the attention of his associates to the unusually numerous instances of this kind. Furthermore, it has been made known that the larger railway companies and the principal manufacturers of rails have recently appointed a committee of experts to make a thorough examination of the whole matter and to report thereon, with a view to bringing about a better state of affairs.

In the public discussion of a matter of this kind, which requires both technical and scientific knowledge, there is naturally room for not a little misconception and error. The ideas advanced in some quarters that the railroads are willfully laying down inferior rails, to the danger of the traveling public, may be dismissed without any consideration. Nor does it seem fair to assume that the companies which manufacture rails are turning out a poor quality in order to enhance the already considerable profit which they make from the standard price of $28 per ton. It would seem, in fact, that the blame can be rather evenly distributed. The railroads are not only doing a much larger traffic, but the tendency on their part is to increase the weight of engines and rolling stock, while they are also loading their cars to the fullest capacity. This increases the weight which the roadbed and tracks have to endure, and enormously multiplies the wear and tear to which the rails are subjected. The larger amount of roadbed which is now ballasted with stone, and thereby is rendered much more rigid, is also an element in the case. On the other hand, competent authorities have been cited to the effect that, with the general tendency to use rails weighing 100 pounds to the yard, instead of the lighter weights which were formerly employed, new dangers arise in connection with the process of manufacture. A 100-pound rail naturally requires a longer time to cool than the lighter weights. In that case the element of haste in manufacturing becomes a possible source of weakness. Insufficient welding while rails are being rolled would, of course, tend to make them brittle. Furthermore, it is claimed that rails of heavier weight do not, on the whole, wear as well as the light ones, although, of course, the increased weight of freight trains renders it necessary to employ the former. The subject, in fact, is a very complex one, and it might be well to suspend judgment until the expert commission, which has been constituted by the railroads and the concerns which supply the steel rails of the country, has completed its investigation and made its report. It should also be noted that the situation has received the attention of the leading railroad managements, with a view to immediate remedy. The Pennsylvania Railroad Company, for instance, in placing its orders, which was done within a few days past, has made more stringent specifications and provisions for inspections and tests than have ever heretofore been devised. Moreover, the tendency among steel manufacturers themselves is to turn to the open-hearth in place of the Bessemer process, rails made by the former having, according to some authorities, superior qualities and a noteworthy absence of the fragility which is inherent in Bessemer rails by reason of their granular consistency.

IRRIGATION AND INTERSTATE WATERWAYS.

It is about six years since the state of Kansas filed a bill against the state of Colorado in which it asked to have the latter enjoined from diverting the waters of the Arkansas river for irrigation purposes or permitting its citizens to so divert those waters. The filing of this bill opened what has been termed the first great legal conflict over the right of one state to use the waters of a river flowing through both its own territory and that of another state for the purpose of irrigation, and the limits of that right. The Kansas authorities alleged that the numerous irrigation ditches in Colorado had caused such a great and permanent diminution of the volume of water in the Arkansas river as to render a once navigable stream almost dry, to diminish greatly the power for manufacturing purposes, to lower to the extent of about five feet the surface of the underflow of the stream, and to cut off the supply of water for irrigation in western Kansas. On the part of Colorado it was contended that that state had exclusive control of the waters within its borders; that diversion was permitted under irrigation law the world over; that immense interests had accumulated unquestioned by Kansas, and that through seepage much of the irrigation

water found its way back into the body of the stream, the navigability of which Colorado refused to acknowledge.

To understand the situation it is necessary to bear in mind that the Arkansas river rises in Colorado, traverses the great treeless plains of Colorado and western Kansas, and near the middle of the latter state changes its generally easterly course to the southeast, running through Oklahoma, Indian Territory and Arkansas, on the border of which it enters the Mississippi. It will be seen, of course, that the irrigation work in Colorado affects the river before it enters Kansas. Much time was consumed in taking testimony bearing upon the controversy between the states, hundreds of witnesses being examined, and not only were many private corporations heard, as well as the authorities of the two states, but the United States was represented as an intervener. The case was passed upon by the Federal Supreme Court on Monday, when the bill filed by Kansas was dismissed, as was the intervening petition of the United States, though the dismissal was declared to be without prejudice to the right of the state of Kansas to renew its petition whenever it is shown that that state is suffering substantial injury.

After a careful examination of the case, the court has reached the conclusions that the appropriation of the waters of the Arkansas by Colorado for purposes of irrigation has diminished the flow of water into the state of Kansas; that the result of that appropriation has been the reclamation of large areas in Colorado, transforming thousands of acres into fertile fields and rendering profitable their occupation and cultivation when otherwise they would have continued barren and unoccupied, and that while the influence of such diminution has been of perceptible injury to portions of the Arkansas valley in Kansas, particularly the portions closest to the Colorado line, yet to the great body of the valley it has worked little, if any, detriment. Regarding the interests of both states, and the right of both to receive benefits through irrigation and in any other manner through the waters of the stream, the court is not satisfied that Kansas has made out a case entitling it to a decree. At the same time, the court says, it is obvious that if the depletion of the waters of the river by Colorado continues to increase there will come a time when Kansas may justly say that there is no longer an equitable division of benefits, and may rightfully call for relief against the action of Colorado, its corporations and citizens in appropriating the waters of the Arkansas for irrigation purposes.

One point of much importance touched upon in the opinion is that as to the power of the federal government in relation to such controversies as that involved in the case. In the view of the court, each state has full jurisdiction over the lands within its borders, including the beds of streams and other waters. It may determine for itself whether the common-law rule in respect to riparian rights, or the doctrine which prevails in the arid regions of the west of the appropriation of waters for irrigation, shall control. Congress cannot enforce either rule on any state. It does not follow, however, that there is no power which can take cognizance of controversies between the states and determine the relative rights of each. In the view of the court, a disagreement of this nature between two states, coupled with its effect upon a stream passing through both, makes the matter one for investigation and determination by that tribunal. While the case before it has come to an end without any precise definition of the limits within which the waters of rivers flowing through two states may be used for irrigation purposes, the Supreme Court has made the point clear that it has jurisdiction to settle finally controversies involving such matters.

EDITORIAL NOTES.

Several weeks ago we printed a news item showing that the governments of Sweden and Hungary were becoming concerned over the volume of emigration. Now it seems that Greece is considering the matter of impeding the movement by legislation. Consul-General Norton writes from Athens that the emigration fever has spread over the entire country, until now it is next to impossible to find a young man in the villages or on the farms who does not live in the hope of some day being able to get away to America. Many of these emigrants have one object in view—the making of money in the United States, so as to be able to return home with a competence. Another feature of this movement may be of interest to the people of this country. We refer to the volume of money sent back to Greece by former residents. Thus in 1902 the number of postal money orders sent from the United States to Greece was 409, with an aggregate value of $12,829; in 1904 the number was 4,477, the value being $135,475; but by 1905 the number had risen to 10,007, valued at $334,848, while the money orders sent from Greece to the United States numbered only 124, their aggregate value being $1,466. In an official report on the subject the director of the postal service of Greece says that if one estimates that one-eighth of the money sent from the United States to Greece comes in the form of post-office orders, it is not too much to say, taking into consideration also the bank notes inclosed in envelopes and the checks upon London, that the entire sum amounts to more than $7,720,000 a year.

At the meeting held a few days ago by the executive committee of the American Bankers' Association in Hot Springs, Ark., action was taken which affords fresh illustration of the general tendency now so apparent in business affairs to hold corporate interests to full accountability for their policies. Recent amendments to the Interstate Commerce law have placed the express companies of the country on the same footing as other carriers in respect to regulation by the Interstate Commerce Commission. Complaints to that body regarding excessive charges are receiving attention. Witness the decision handed down some days ago against the United States Express Company in respect to its charges for the transportation of cut flowers from points upon the roads over which it operates to New York, whereby the company was directed to reduce its rates practically by one-half. It seems, however, that the movement to regulate and restrict the operations of the express organizations is not confined to their patrons or the government itself. It is announced that the banking interests of the country, represented by their executive committee, resolved at the meeting referred to above to investigate the banking transactions carried on by several express companies. A committee has accordingly been constituted which will look into the subject, and is charged with the duty of reporting whether the express companies which perform the function of an authorized bank in receiving deposits, buying or selling drafts and issuing bills of exchange are acting within their powers. It is urged that the national banks of the country are restricted by well defined laws, and that as the express business is now subject to the jurisdiction of the Interstate Commerce Commission, that body ought to investigate and limit the banking operations of such concerns, which, up to the present, have been untrammeled by legal safeguards or restrictions.

For a number of years past the *American Grocer* has made it a practice to compile data regarding the volume of money annually spent in the United States for alcoholic drinks and non-alcoholic stimulants, the aggregate being known as the nation's drink bill. This bill, especially the alcoholic part of it, is a heavy one; it has always been so, and it grows year after year. These facts are forcibly brought to one's mind when it is stated that in 1899 the country's alcoholic drink bill was $973,589,080, whereas in 1906 the retail cost of alcoholic stimulants was $1,450,855,448, the gain in the eight-year period being 49 per cent. This total of nearly a billion and a half dollars represents an increase of $125,416,000 over the figures for 1905, and of $173,000,000 over the returns for 1904; and according to our contemporary, it is considerably in excess of the sum appropriated by the Fifty-eighth Congress for the divers branches of the government; it is one-fifth the total value of all of the farm products of the nation; it is double the value of the wheat crop and also twice that of the cotton crop. In 1897 the per capita consumption of alcoholic drinks was 16.49 gallons, while in 1906 it was 22.27 gallons, the ratio of gain for the decade being 34 per cent. Beer is the national alcoholic drink, the per capita consumption in 1906 being 20.20 gallons, or a total of 1,699,985,642 gallons. That total indicates that consumption has increased 59 per cent., or 630,000,000 gallons, in ten years, and it also means, according to the computations of our authority, that the consumption of beer in 1906 for the first time exceeded the consumption of coffee, which was consumed to the extent of 1,609,452,000 gallons. The consumption of whiskey in 1906 is placed at 1.51 gallons per capita, which compares with 1.02 gallons in 1897. We were speaking of alcoholic drinks only, but if we include non-alcoholic drinks, such as coffee, tea and cocoa, the total drink bill, so called, amounted in 1906 to $1,667,083,610, the gain over 1905 being $121,000,000, and $169,000,000 over 1904.

Exports of canned beef have declined month by month for over a year past. At first the explanation made was that the falling off was due to reduced takings by Japan, but this was early proved to be incorrect, because the shrinkage has continued steadily beyond the periods affected by the war, and the falling off is practically universal, only Germany and France, among European countries, taking more in the present fiscal year than they did a year ago. April exports of canned beef were less than a fourth those of April, 1906, and the same proportionate falling off is shown for the ten months' period, as the following table shows:

Ten months ending April—	*Pounds*	*Value*
1900	49,021,924	$4,603,287
1901	46,819,540	4,656,587
1902	54,679,883	5,414,797
1903	66,313,115	6,906,377
1904	51,872,732	5,322,614
1905	55,125,304	5,496,556
1906	56,730,873	5,667,747
1907	13,032,703	1,330,283

The above statistics show that the canned-beef exports are at present but the ghost of their former importance, and the showing made as to takings by the United Kingdom, formerly our best customer, is really startling. In 1906 the United Kingdom took 71 per cent. of our exports for nine months, or over 38,000,000 pounds. This year, for the same period, it has taken only 47 per cent., or 5,756,000 pounds. In quantity, the British takings are only about one-seventh of last year's purchases, while in value they are only one-sixth of those of a year ago.

At the present time there is a pronounced disposition on the part of stockholders not connected in a direct way with the management of railway and other corporations to voice their discontent with the methods of officers and directors of such organizations. This fact received fresh illustration during the present week in connection with the developments at the annual meeting of the Delaware & Hudson Company. That well-known corporation has for many years held annual meetings at which unanimity and full agreement with whatever was reported or suggested by its management were the most conspicuous features. At the meeting of the company held in New York on last Tuesday there was not only a remarkably large attendance of stockholders, but representatives of a dissenting minority spoke their minds in regard to recent developments concerning the finances of the corporation and the line of action followed by its management, involving the creation of new indebtedness, the acquisition of trolley lines, which were to some extent competitors of the road, and the purchase of considerable tracts of undeveloped coal lands. Ex-Judge Cowing, who was the chief spokesman for the dissenting stockholders, made a vigorous address, and while there seems to be some exaggeration in the charges that the transactions of which he complained were injurious to the company's interests, the effect of the incident is not likely in the long run to prove unfavorable in connection with corporate affairs generally. The fact that Mr. Loree, the recently elected president of the Delaware & Hudson Company, indicated in his reply that the deals in question were made before he assumed charge, was, of course, natural. At the same time it was stated that the company requires a considerable amount of fresh capital, and later in the week came the announcement that the directors had practically decided on the creation of a $10,000,000 equipment bond or note issue, the details of which, it is understood, may be made public within a month.

RECENT LEGAL DECISIONS.

[*Prepared for* BRADSTREET'S.]

Insurance Policies—Bank—Sale.

The Supreme Court of the United States, in the case of Hiscock vs. Varick Bank, sustained the right of the bank to sell life-insurance policies deposited as security for notes made by a person prior to the time bankruptcy proceedings were instituted against him.

Railroad—Mill—Logs—Discrimination.

The Supreme Court of North Carolina held, in the case of Hilton Lumber Company vs. Atlantic Coast Line Railroad Company, that the shipping over a railroad of the products of a mill does not justify a discriminatory rate in favor of the logs shipped to the mill from which the product is made.

Accident—Street Car—Negligence.

The Supreme Court of Pennsylvania held, in the case of Harding vs. Philadelphia Rapid Transit Company, that one riding on the running board of a summer car outside of a lowered bar was negligent per se, and could not recover for injuries received whether he could have got a safer position or not.

Customs Decision—Sheepskins—Wool.

The Supreme Court of the United States reversed the decisions not only of the customs officials at New York, but also of all the subordinate courts, in holding, in the case of The Goat & Sheep Skin Import Company of New York vs. the United States, that mocha whitehead sheepskins from which the coat has not been removed are not dutiable as wool on the skin, but are entitled to admission free of duty.

Drug Dispensing—Regulation.

The Supreme Court of Wisconsin held, in the case of State vs. Evans, that a statute of that state prohibiting the dispensing of drugs in any town, etc., having a population of 500 or more, except in the charge of a registered pharmacist, while in towns, etc., of less than 500 population similar acts were prohibited, except by a pharmacist, was not invalid under the Fourteenth Amendment to the Federal Constitution as a merely arbitrary discrimination.

Charter Party—Dead Freight.

Judge Adams, sitting in the United States District Court for the Southern District of New York, held, in the case of Nordstjernan vs. Gans et al., that where a provision was made in a charter party that it should be superseded by the bills of lading, and an adjustment was reached between the charterers and the master before the sailing of the vessel, and bills of lading were signed showing that no dead freight was due, it could not afterwards be recovered by the owners for the charterers.

Railroad—Classification—Laundry Soap.

The Supreme Court of the United States held, in the case of The Cincinnati, Hamilton & Dayton Railroad Company vs. The Interstate Commerce Commission, that common laundry soap in less than carload lots should be taken out of the third class of freight, as provided by the classification made by the railroad company in February, 1900. The act of the railroad company in transferring the soap from the fourth to the third class was complained of as involving discrimination in favor of other articles.

Taxpayers' Suit—Railway—Joinder.

The Supreme Court of Louisiana held, in the recent case of Gill et al. vs. City of Lake Charles et al., that taxpayers may join in one suit for the purpose of preventing the illegal disposition of the property of the municipality as may property holders along a street to prevent an obstruction of the street, or to contest the right of the municipality to grant to a railroad company a right of way along a so-called street traversing their several properties, which they claim is not in fact a street but private property belonging to them.

Stock Transactions—Contract—Validity.

The case of King vs. Zell et al., recently decided by the Maryland Court of Appeals, arose out of a suit brought by the appellees to recover from the appellant a balance due for certain stocks purchased by them for him. The appellees testified positively that the stocks involved in the account were actually purchased at the Stock Exchange in Baltimore, in which they held a membership, and paid for by them for the account of the appellant, and one of them testified explicitly that the appellees' firm was ready at all times to deliver the certificates to the appellant, and would have done so at any time upon receipt from him of the balance due them thereon, and this testimony was not contradicted. A judgment for the appellees was affirmed, the Court of Appeals holding that contracts between stockbrokers and their customers should be treated like contracts between other persons; that the law presumes contracts to be valid, and that the burden of proof is on those seeking to avoid such contracts as that involved in this case, to show that they are gambling transactions.

Trading-Stamp Companies—Licenses.

The Kentucky Court of Appeals held, in the case of Commonwealth vs. Gibson Company, that section 4224 of the Kentucky statutes, requiring "all resident trading-stamp companies or corporations doing business in this state to annually pay a license tax of $10 to the county court clerk of each county wherein such business is conducted," applied only to all resident or foreign trading-stamp companies or corporations doing business in the state, and was not designed to prohibit bona fide merchants from offering discounts or rebates to cash purchasers of their goods.

Privileged Communication—Accident.

The Supreme Court of Ohio held, in the case of Re Schoepf, that a report made to the claim agent of a street railway company by the conductor and motorman of an electric car of an accident in which a passenger was injured which was made pursuant to a standing rule of the company for the information of the claim agent as a basis for settlement, or for use of counsel in case of suit against the company, was a privileged communication the production of which could not be enforced in the taking of depositions before the trial in a suit against the company for injuries received in such accident.

Smelter—Fumes—Forests—Injunction.

The Supreme Court of the United States held, in the case of The State of Georgia vs. The Tennessee Copper Company et al., that the state was entitled to protection for its forests, and that the companies could be enjoined from so conducting their smelting works on the Tennessee side of the boundary line as to destroy forests and vegetation in Georgia. The motion of the state for an injunction will be entertained unless the companies make such improvements as will put a stop to the objectionable fumes objected to by the state, which has been asked to submit a form of decree by the time the court meets in October.

License—Due Process of Law.

The Supreme Court of the United States held, in the case of Tracy vs. Ginsberg, that the police board of Boston, by issuing a liquor license on a vacancy created by bankruptcy, to the nominee of the trustee in bankruptcy of the original licensees, did not deprive a co-licensee to whom the original license had been assigned as security of property without due process of law, where his so-called property right depended wholly upon the practice of the board to reissue licenses to the old holders until refused for cause, since such right being of the board's creation was subject to any limitation which the board might impose.

Eight-Hour Law—"Emergency."

The Court of Appeals of the District of Columbia held, in the case of The Penn Bridge Company vs. The United States, that sections 892 and 893 of the Code of the District, limiting the hours of daily service for laborers and mechanics employed by contractors for public works to eight hours in any one calendar day, and providing a penalty for the violation of its provisions, are constitutional and valid; that under those sections it is unlawful for a contractor upon public work to require or permit a laborer or mechanic employed by him to work more than eight hours in any one calendar day except in case of extraordinary emergency, and that the terms "extraordinary emergency," as used in the statute, import a sudden and unexpected happening, an unforeseen occurrence or condition calling for immediate action to avert imminent danger to health or life or property; an unusual peril, actual and not imaginary, suddenly creating a situation so different from the usual and ordinary course in the prosecution of the work that the court may and must conclude that Congress contemplated excepting it from the operation of the law. The court further held that the question as to what constitutes an "extraordinary emergency" within the meaning of the statute is one for the court to determine.

BUSINESS NOTES.

Industrial Importance of Duluth.

Duluth has always laid claim to a superior position as an industrial and shipping center, so it is with interest that we read the following: "In Duluth building is going ahead rapidly," says the Duluth *Herald*, "the number of permits showing an increase of 18 per cent. over the previous year, and the estimated cost shows an increase of 66 per cent. This is exclusive of large enterprises going on just outside of the city limits. Additional enterprises are projected that will swell the rate of progress. Among these is a $7,000,000 plant to be established by the United States Steel Corporation, which it is estimated will add 10,000 to the city's population. Four additional railroad lines are heading for the city. Duluth claims to have the greatest coal docks in the world, and it needs them, as the total receipts last year were 5,358,293 tons. It is a great center of white-pine lumber production, a leading market for wheat, and is the chief flaxseed market of the world. With vast mining, forest and agricultural resources to draw upon in the country around it, and standing at the head of the navigation of the Great Lakes, Duluth has solid ground for its present prosperity and an assured basis of continuous growth."

Expenditures by American Railways.

The Chicago *Record-Herald* states that "American railways will spend close to $1,000,000,000 during the present year in an extraordinary effort to secure sufficient equipment, power and track, including new road, to make it possible to handle the great amount of traffic being offered to them. If the car and locomotive builders and the steel-rail makers do their part, the year will be a record one in the three industries mentioned. It is estimated that, if the manufacturers are equal to the test, between 340,000 and 350,000 freight cars will be added to the total equipment of the railways of the United States, fully 5,000 passenger cars will be built, and more than 6,000 locomotives will be added to the steam power which is now available. It is estimated that the railroads will pay fully $92,000,000 for steel rails during the present year. If this proves true, the steel mills will have to turn out about 3,300,000 tons of that product. The output last year was about 3,250,000 tons. It is said the western roads will use fully 1,600,000 tons of rails and that nearly 1,000,000 tons of this will be rolled in the eastern mills."

Reduced Efficiency of Labor.

The financial editor of the New York *Sun*, writing of the reduced efficiency of labor, declares that "the railways and manufactories of the country have been trying in the last year or so to do 30 per cent. more business with labor 20 per cent. less efficient than before. It seems to be the old story over again that where wealth accumulates men decay. For a few years after the distress and penury of the years from 1892 to 1897 the laboring men of the country were willing to work gladly when they could get work; and when later their wages were increased as the enlarging prosperity of the country began to make itself felt, they did not at all abate their cheerfulness, nor was the efficiency of their work diminished. But as all this prosperity became more pronounced, as men at work in every department of a great industry began to taste the pleasures of larger pay and lower hours of labor, and began to realize that all over the country there were practically two jobs offering for every man that could be found to fill them, their discontent with their lot appeared to be heightened instead of being allayed, and they began to work when they did work in a more lazy and less efficacious manner."

Celery Culture.

Celery culture in the United States on an extensive scale is limited to comparatively recent years. Many persons to-day can recall the time when it was considered a novelty and appeared on the table only for garnishing or flavoring purposes. Celery has become to-day one of the common garden crops. So rapidly has the commercial demand for it increased that the product in the United States is now reckoned by hundreds of carloads. It is no longer classed as an expensive luxury. It has become a wholesome, palatable addition to the fare of the people generally. Discussing the various forms in which celery appears on the table to-day, a horticulturist of the Bureau of Plant Industry says that while celery may not possess much actual food value, it is very attractive and its use is an important one, from the fact that it furnishes an essential vegetable ingredient of a well-regulated diet. "Coming, as it does, at a time of the year when large quantities of meat are consumed and green foods are not plentiful," says this authority, "the use of celery makes other foods more palatable and greatly aids digestion." Celery growing on a commercial scale in this country received special attention and made its greatest progress after the opening and draining of the "muck-bed" areas of the Great Lake region. In Michigan, Ohio and New York several thousand acres of celery are grown annually. In California and Florida celery growing to-day is an important industry. New fields for the production of this crop are developing from time to time, and celery is found on the market throughout almost the entire year. In Florida and California the growing of celery presents a different business proposition from its culture in the northern and eastern states. In the warmer climates it matures between Christmas and Easter. The crop does not, therefore, come into competition with that of the northern and eastern territory to any extent; it serves to lengthen the season of celery consumption.

Old Ore Mines Being Reworked.

According to the *Iron Trade Review*, "the high prices now ruling for Lake Superior ores are having a natural effect in reviving the iron-ore industry of eastern Pennsylvania, which was once highly prosperous, but has waned since the discovery of the richer and more easily mined ores of Minnesota. Note was made not long ago of the purchase by the Bethlehem Steel Company of the Boyertown mines, which were first opened nearly 200 years ago. The Richard Heckscher & Sons Company, which operates the blast furnaces at Swedeland, about fifteen miles from Philadelphia, has resumed the mining of ore from old mines lying within half a mile of its plant, and the owner of an adjoining mine, which has not been worked for fifty years, is said also to contemplate the resumption of work. The Hecksches are also interested in a plan to reopen the old Hopewell mine, distant some fifteen or twenty miles from their furnaces, which has not been worked in a long time and is full of water. If these operations prove successful and Lake Superior ores continue at their present level or advance, there is little doubt that scores of other abandoned mines in eastern Pennsylvania will gradually become active again. Their ores, when blended with richer ores brought in from Cuba, Spain, Sweden and other foreign countries, produce excellent iron. With these local supplies to draw on, supplemented by foreign ores, the furnacemen of eastern Pennsylvania and New Jersey feel that they occupy a stronger and more independent position than those producers of the middle west who are entirely dependent upon Lake Superior ores."

Sea-Island Cotton.

C. A. Gordon, of Savannah, Ga., in a recent address to the International Cotton Ginners' Association, said that "at the present time sea-island cotton is spun by only a small number of spinners. Yet the spinner who looks to the future and is determined to succeed is likely to be constantly saying to himself, 'spin finer, and then finer, and yet again finer.' In order to do this, however, he must have the proper raw material. Cheap cotton will produce poor yarn; you cannot fool the machinery, and therefore it is likely, as time goes on, that an increasing number of you will be seeking sea-island cotton, and will wish to have a regular, abundant, properly classed and reasonably priced supply. The territory where sea-island cotton is now raised is capable of producing twice, or even three times, the amount of sea-island cotton now grown. Not one-third of the available land is under cultivation. A year ago the crop reached a total of 125,000 bales, the largest on record. This year, owing to reduced acreage and unfavorable weather, it will not reach 60,000 bales; but, given an abundant supply of labor, a crop of 300,000 or even 500,000 bales, weighing 400 pounds each, could be produced. There is another feature in this connection which will probably appeal to spinners whose mills are at a distance from the cotton fields. The cost of the raw material is so small an item in the total cost of goods manufactured from sea-island cotton that transportation charges have very little effect upon the price which the spinner can pay. It therefore follows that the competition of the mills situated in the south, while it may prove injurious to northern mills, which attempt to spin coarse numbers, is not likely to hurt the mills spinning fine numbers."

CURRENT BUSINESS NEWS.

Commercial.

Madras is the fourth largest port of India. In the fiscal year 1905-06 its imports amounted to $25,915,791, of which the United States furnished $310,239. Kerosene is the most important article imported from the United States, its value being $281,954 in the fiscal year just named. There is not a single American engaged in trade in Madras. There are ninety-eight Americans living in and near Madras, all of whom are missionaries. The city contains nearly 600,000 population and has a coast frontage of nine miles. The total exports from Madras during the fiscal year 1905-06 were valued at $51,983,790. The exports to the United States during this period amounted to $4,226,763.

Deliveries of coffee in Europe for ten months of the trade year were 8,659,810 bags and in the United States 5,719,754 bags. Comparisons for two years are as follows:

	Europe		*United States*	
	1906-07	1905-06	1906-07	1905-06
July	779,135	671,293	426,517	376,925
August	861,470	796,061	602,079	532,545
September	858,461	895,569	463,763	505,248
October	1,034,279	898,209	712,832	641,395
November	923,348	1,016,776	712,936	578,769
December	771,614	782,257	561,295	626,044
January	860,968	780,968	747,288	688,336
February	711,148	785,077	558,614	583,980
March	931,474	938,547	610,058	689,681
April	927,913	787,928	567,997	502,831
May	....	841,048	....	548,205
June	....	740,599	....	538,924
Total	8,659,810	9,934,332	5,963,409	6,806,883

The Michigan state report places the May 1 condition of wheat at 74, against 83 last month and 75 last year, with the crop 12,000,000 bushels. Eight per cent. of the area has been plowed up, against 7 per cent. a year ago.

The Weather Bureau at Washington, Tuesday, gave out the following weekly summary of weather in the crop states: "While the temperature conditions in the southern states were more seasonable than in preceding weeks, rains proved generally unfavorable. Northern and central portions of the country have continued to experience abnormally low temperatures, but the deficiency has been less marked than for several weeks. Light to heavy frosts were general in the upper Missouri, upper Mississippi and Ohio valleys, lake region and middle Atlantic states. Absence of rain in the upper Missouri valley is beginning to be felt, while drought conditions in Oregon have been wholly or partially relieved. Damaging hailstorms occurred in portions of the west gulf and south Atlantic states during the fore part of the week. There was much cloudiness in the Atlantic coast and gulf districts until the latter part of the week, but in the central valleys and western states sunshine was generally ample. While generally cloudy weather prevailed on the Pacific coast during the latter part of the week, conditions in that region, as a whole, were favorable."

This table of index numbers gives the trend of English commodity prices as measured by the London *Economist's* compilation:

End of	*Index No.*	*End of*	*Index No.*
April, 1907	2549	June, 1906	2362
March, 1907	2516	March, 1906	2306
February, 1907	2521	December, 1905	2342
January, 1907	2494	June, 1905	2163
December, 1906	2499	December, 1904	2136
November, 1906	2501	June, 1904	2130
October, 1906	2458	December, 1903	2197
September, 1906	2355	December, 1902	2003

Statistics of alcoholic consumption, obtained from the office of the British Chancellor of the Exchequer, have enabled some of the London papers to make a per capita exhibit for various countries over a series of years. The latest figures are for 1905, and from them we extract the following comparison (per capita consumption in gallons):

	Beer	*Distilled spirits*	*Wines*
Belgium	48.8	1.10	1.02
United Kingdom	27.7	.91	.32
Germany	26.3	1.43	1.45
Denmark	20.5	2.42	..
United States	16.8	1.26	.43
Austria	14.3	1.99	3.90
France	7.5	1.37	30.80

Italy comes next after France in wine-drinking with twenty gallons per capita, and Spain next with eighteen and one-half gallons.

Consul H. A. Conant, of Windsor, states that it will be of interest to American manufacturers and merchants who are sending catalogues and other advertising matter into Canada to know that under the new postal regulation, effective on May 8, 1907, the former rate of 1 cent a pound for bona fide newspapers, with a special rate for publications classed as advertising matter, is replaced by a uniform rate of a cent for four ounces, applying to all classes of publications.

Statistics given by the *Publishers' Circular* show that the English export of books is increasing at the rate of about half a million dollars a year. The exports in 1906 were of the value of $47,910,525. The United States was the largest customer, taking printed matter to the value of $16,234,195 in 1906 and in return sending printed matter to the value of $7,561,315. Both the import and export trade are on the increase.

It is estimated that Cuba's sugar crop will approximate 1,300,000 tons, against 1,200,000 last year; but next year's crop promises to be very short. The tobacco crop is short owing to lack of rain, but the quality is excellent.

Foreign crop conditions as published Tuesday in Broomhall's Liverpool *Corn Trade News:* United Kingdom—Warm, dry weather is still wanted. France—The outlook for the crops is generally favorable. Supplies are still scarce. Germany—The weather is favorable and the crops have shown some improvement. Hungary—The heat and drought still continue, which is causing further deterioration to the crops. Roumania—Drought is still causing apprehension to the crops, and the outlook for corn is bad. Russia—Dry weather now extends in the direction of the southeast, but there are no serious complaints heard from as yet. Supplies are very light. Bulgaria—Thirty per cent. of the winter crops have been abandoned, the same being replaced with spring grain. Rain is urgently needed. Turkey—The outlook for the crops in European Turkey is unfavorable, while in Asia Minor the outlook on the whole is bad. Italy, Spain and North Africa—The outlook for harvest, on the whole, is satisfactory. Argentina—The strike situation still continues and is slightly hindering the loading of grain. The market is firm and prices are advancing rapidly. India—The weather still continues favorable.

According to the *Mexican Herald* of May 9, Yucatan, Mexico, is suffering financial stress, and as a result three commercial houses failed during April for over $6,000,000. Two of these houses have, however, liquidated their indebtedness. The primary causes for the stress is attributed to drought, losses by fire, the tightness of the local money market, and low price of heniquen, which brings only 6⅞ cents per pound in the United States, the chief market.

The Agricultural Department reports that the Bureau of Entomology has distributed hundreds of thousands of insect parasites in Oklahoma, Texas and Kansas to combat the green bugs. The green bug is being overtaken and controlled by its natural enemy and has practically disappeared in many places. It is said that 50 per cent. of the bugs in Kansas are infested with the destructive parasite.

Interviews with a number of leading grain merchants and members of the produce section of the Berlin Bourse indicate that a feeling of great uncertainty prevails in connection with the international grain situation. The dealers generally are disposed to regard the present wave of speculation as exaggerated. All admit, however, that the United States holds the key to the international situation, but the tendency is to believe that the situation and the reports of crop shortage are exaggerated so far as Europe is concerned. The merchants add that it is also premature to predict a heavy shrinkage of production at so early a period in the season, the spring sowing being too little advanced to be estimated as a factor in the general yield. All things considered, the dealers expect that high prices will be maintained, in view of the growing population in comparison with the grain supplies, Germany, in particular, demanding larger and larger quantities every year, through the addition of 800,000 to her population annually.

The statistics of the British Board of Trade for the United Kingdom in 1906 show that the total imports from foreign countries and British possessions during the year amounted to $3,039,442,500, as against $2,825,099,585 in 1905, while the exports were $1,877,876,690 in 1906, as compared with $1,271,170,300 in 1905. The total value of the imports from British possessions and protectorates in 1906 was $710,826,200. The total exports to British possessions and protectorates were valued at $606,706,390.

The aggregate value of the cotton crop in 1906 has, according to the Bureau of the Census, been placed at $721,647,237, or nearly $1,000,000 above that of 1905. This total includes both upland and sea-island cotton, as well as cotton seed, the latter item being given at $81,335,699. It is noteworthy that sea-island cotton has declined to half the quantity of 1905, when the crop was 43,973,904 pounds, compared with that of 1907, of only 21,706,389 pounds. Another change is seen in the value of cotton seed. The lowest value occurred in 1905, which was seriously impaired by the gulf storms east of Texas, causing a loss in the quality of the oil and in the feeding value of the meal. Total value of the crop and seed is given below:

	Crops	*Cotton seed*	*Total*
1906	$640,311,538	$81,335,699	$721,647,237
1905	556,833,817	75,464,515	632,298,332
1904	561,100,386	90,931,250	652,031,636
1903	576,499,824	84,049,406	660,549,230
1902	421,687,941	80,209,194	501,897,135

Estimates of the California prune crop make the 1907 output 25 to 35 per cent. less than last year. It is figured that the Santa Clara valley will produce only 42,000,000 pounds, against 120,000,000 pounds last year. It is but fair to state, however, that some observers are more optimistic as to final returns.

The statement is made by the Bureau of Statistics of the Department of Commerce and Labor that the amount of canned beef exported from the United States during the present fiscal year will be only one-fourth what it was last year. The decrease is noted in the trade with nearly every country that uses American canned beef.

Financial.

According to the *Wall Street Journal*, outgoing steamers to Europe are now filled with American tourists, and probably $100,000,000 to $200,000,000 of tourists' money will be spent abroad this summer.

The Homestake Mining Company announces that for the first time in over twenty-eight years it has been deemed advisable to temporarily discontinue the payment of the monthly dividend. This action is due to the fact that there is a fire in the mine, which prevents operation underground, and the mills are hung up in consequence. Pending the resumption of operations, the management decided to maintain its financial position by temporarily discontinuing the dividend.

A new Missouri law which goes into effect on June 16 forbids the sale of any commodity or stock that the seller does not actually own and possess at the time the transaction is made.

The official statement accompanying the budget estimates of France for 1908 announced that it is the purpose of the government next year and thereafter to live strictly within its income and thus avoid recourse to short-term loans. The budget for 1908 will be kept down to the amount raised by taxation, $15,200,000 being deducted from the estimates of the ministries. About $4,600,000 will be saved by the introduction of a new system of paying military and civil pensions and $4,000,000 by spreading the subsidies of the merchant marine over a period of years.

The Massachusetts Anti-Bucket Shop bill became a law Wednesday, when Governor Guild signed it.

The common and preferred stocks of the Federal Sugar Refining Company have been admitted to quotation in the unlisted department of the Stock Exchange, and the shares of the Federal Sugar Refining Company of New Jersey have been stricken from the list.

Announcement was made Wednesday that the directors of the Delaware & Hudson Railway Company had authorized an issue of $10,000,000 equipment notes. These are to be issued in their discretion.

Directors of the Standard Oil Company on Wednesday declared a quarterly dividend of $9 a share, the same as declared at this date last year and in 1905. In 1904 the rate was $8; in 1903, $7; in 1902, $10; in 1901, $12; in 1900, $10. The dividend declared on March 15 last was $15.

The report of the Anaconda Copper Company for the year ended December 31, 1906, shows an increase of $3,234,667 in total receipts, which amounted last year to $26,968,870. Total disbursements increased only $238,220, to $18,384,701, leaving net income of $8,584,169, to which was added interest amounting to $258,500, making a total of $8,842,669. These net profits, which are 29.47 per cent. on the company's $30,000,000 of stock, remain after the deduction of all expenses of development, depreciation and depletion of coal and timber lands. Dividends totaling $6,900,900 were paid, being double the disbursements in the previous year. The increased earnings were made despite a decrease in the output of copper from 95,443,730 pounds in 1905 to 94,963,835 last year, and were due to the high price obtained for the metal, which, though not stated in the report, has averaged several cents a pound above the market of 1905.

Directors of the National Lead Company on Thursday declared a quarterly dividend of 1¼ per cent. on the common stock, placing the stock on a 5 per cent. annual basis. Since dividends were resumed in July, last year, quarterly payments have been 1 per cent. From 1898 until 1900, when the dividend was passed, 1 per cent. was also paid. Nothing was distributed in 1896 or 1897. In 1895, 1 per cent. was paid, and in 1894, 3 per cent. As a result of the increase in the price of lead during the past year, the company's earnings have been increased, this being given as the reason for the larger dividend. The regular 1¾ per cent. dividend was declared on the preferred stock.

Directors of the General Electric Company have voted to offer stockholders $13,000,000 of 5 per cent. ten-year debenture bonds, equal to 20 per cent. of their present holdings of stock, the proceeds to be used to meet the demands of increasing business. The bonds will be dated June 1, 1907, and will be convertible into stock at par after June 1, 1911. After that date they will be redeemable at 105. The subscription price will be par and interest.

Railroads.

It is reported that the Southern Railway has abolished the positions of twenty-nine traveling passenger agents throughout eastern states.

An American company intends to construct an electric railway between Vienna and Buda-Pesth, the trains to run hourly. The prospects for the success of the enterprise are favorable.

After clearing up the indebtedness of the Chicago, Indiana & Eastern Railroad, forty-three miles long, which has been operated for some time by a receiver, the Pennsylvania Company has secured all the stocks and bonds of the road and has made it a part of the Logansport division of the Panhandle system, thereby providing for the Pennsylvania system a second entrance into Muncie, Ind.

Estimated earnings of the Union Pacific system for the year ending June 30, 1907, compare with the actual figures of previous years as follows:

	1907	1906	1905
Net earnings	$32,465,000	$30,317,769	$27,462,235
Chges and sinking fd	9,564,000	8,882,911	11,173,487
Balance	22,901,000	21,434,858	16,288,748
Other income	13,370,000	10,329,816	6,496,759
Totali ncome	36,271,000	31,764,674	22,785,507
Dividends	24,100,000	19,532,424	11,087,060
Surplus	12,271,000	12,232,250	11,698,447

The estimated statement of the Southern Pacific for the year ending June 30, 1907, compares with the actual figures of previous years as follows:

	1907	1906	1905
Net earnings	$44,697,020	$37,742,618	$31,546,962
Charges	18,929,000	18,549,971	19,114,989
Balance	25,768,000	19,192,647	12,431,973
Dividends	12,661,000	7,716,125	2,769,431
Surplus	13,107,020	11,476,522	9,662,542

Kuhn, Loeb & Co. have arranged to float in the United States a $40,000,000 loan of the Southern Manchurian Railway. The loan is probably to be in the form of 4 per cent. first mortgage bonds, but the details have not yet been determined on. The negotiations were carried on here through M. Soyeda, who has since gone to Europe. The exact amount of the loan is 80,000,000 yen. The Southern Manchurian Railway has been recently turned over by the military authorities to the regular management of the road.

Governor Stokes on Thursday signed the bill creating a state railroad commission in New Jersey.

The Pennsylvania Railroad Company has 45,496 shareholders, the largest in its history, and twice as many as it had ten years ago. In 1906 the dividend paid by the Pennsylvania amounted in volume to three times that paid in 1897. The increase in wages granted by the company in the last few months amounts annually to more than the total dividend, something over $12,000,000, paid in 1902. With the semi-annual dividend of 3½ per cent., payable May 31, the Pennsylvania Railroad will have paid out $132,913,392 in dividends in the last ten years.

Wm. A. Read & Co.

STATE OF TRADE.

[A Summary of Special Telegrams to BRADSTREET'S.]

Unseasonably cold or rainy weather is a subject of complaint throughout a wide area, checking retail trade, dulling reorder business with jobbers, retarding collections, and, in connection with reports of damage to crops, forcing values of all agricultural produce to high levels. Except on a few days when a warm wave stimulated distribution in some sections, complaints were well-nigh universal, the only section sending optimistic reports being the Pacific northwest. The southwest, central west, south and leading eastern centers all send reports of backward retail trade, which find reflection in advices of smaller than expected reorders for light summer-wear goods, cloaks, suits and millinery from jobbers and wholesalers, and of a disappointing business for fall in men's-wear clothing from manufacturers. Taken as a whole, crop reports are a trifle more encouraging, insect damage to wheat being reported checked in some states and fair progress being made in planting spring wheat in the northwest. The cold weather, however, prevents best growth in winter wheat and oats and cotton and retards planting of corn, the last of the great crops to be seeded. The general consensus of reports is that warm, growing weather is now imperatively necessary if good results are to be looked for in crop matters, and there is a more marked disposition to await definite information as to this before heavy commitments are made as to the future in many lines.

There are many lines, however, in which signs of hesitation are looked for in vain. The iron and steel situation as a whole is really stronger both in crude and finished lines, despite current record outputs. Steel rails are being bought freely for 1908 delivery, and pig iron sells briskly for the last half of the year at higher prices. Another strongly situated line is that of cotton goods, which feel the impetus of current demand still exceeding deliveries, of higher prices for raw cotton, and of widespread advances in wages of mill help, which is still in insufficient supply north and south. There is also more doing in wool at the west, where the deadlock between dealers and producers has been broken. Prices have been paid which, indeed, indicate that eastern quotations must advance to show profits for the dealers. The April report of gross railway earnings, given in another column, is a truly remarkable one, pointing to a total aggregate increase over April, 1906, larger than in any month for over a year past, and fully 16 per cent. larger than in April a year ago. The money situation is not materially changed, because while money on time is apparently a trifle firmer, banks are more disposed to lend freely on commercial paper. Call money is easy. Speculative interest has neglected securities, and a wide public speculation in wheat and other grains and cotton has been accompanied by higher prices all around. These are partly based on crop damage at home, but in wheat poor European crop reports are also a feature. There are reports that unfavorable weather has checked building in some sections; incidentally materials are easier in some localities, but large primary lumber markets report good demand and firm prices.

The public got in the wheat market this week on a large scale, continuing the excitement developed last week and causing the broadest market for that cereal since the spring of 1898, when the Leiter boom culminated. Two great bursts of buying developed, one on Monday, May 13, when prices at Chicago opened 5 cents higher than the Saturday close, and the other on Thursday, May 16, when July wheat advanced 6 cents in one hour, holding most of the gain to the close. Poor crop reports, cold weather and snow in the northwest and west, and light world shipments were the moving features in the Monday advance, while the Thursday gain was apparently a result of enormous buying or predictions of very bullish crop estimates. The net advance on quotations from Friday to Friday was 10 cents, while the advance from the low point of the year was 24¾ cents. Compared with a year ago cash wheat is 12 cents higher. Abroad poor crop reports are quite general, but the advance here has outstripped foreign markets, New York being higher than either Liverpool or Berlin, and export trade has been checked. Wheat, flour, corn and oats are all higher than a week ago, the advance in wheat and reports of damage or of retarded seeding operating to stiffen quotations. Cotton is 30 to 50 points higher on futures, and spots are 15 points up, with a rise from the low point of the year of 115 points. Cotton-seed oil has also gained 3 cents, pork is 25 cents up and lard is firmer.

Poor crop and weather conditions for the past two months are reflected in very high prices for all kinds of vegetables, with the quality of offerings poorer than usual.

Wheat crop reports to BRADSTREET'S are a trifle more optimistic, but the situation demands good weather from now on. Green bug damage has been stayed in southern Kansas, but is reported in Nebraska. Cold weather makes the plant small and late. Improvement is claimed in Ohio, Illinois, Missouri and Kansas. Corn planting is being retarded by cold weather and ground. Good weather is demanded if increased area is to be seeded. Spring wheat seeding is late in the northwest. Minnesota and South Dakota will finish this week. North Dakota, the largest producer, is still backward. Perfect weather is needed if crop is to turn out well. Red River Valley prospect is best in years. Planting in Canada is very late, and 10 to 20 per cent. decrease from a year ago may be shown in Manitoba and Saskatchewan, all depending on weather from now till June 1. Oats are badly spotted, but show some gain this week. Crops in Oregon, Washington and Idaho are in good shape. Some improvement is noted in California. Cotton is three weeks to a month late. Some land has been planted three times in Alabama, Georgia and Louisiana. Average conditions are reported in Texas, which needs warmth. The crop is being chopped out in South Carolina, where condition equals a year ago. Better outlook for late crops is reported in Florida.

Leading lines of export trade contributed little to the 9 per cent. increase shown in all exports for April over the same month a year ago. Breadstuffs, mineral oils and cotton show gains, but provisions and animals showed decreases, and the five classes of exports combined show a gain of only 5 per cent. over a year ago. Other exports show gains more than double the increases shown by leading exports, gaining 13 per cent. over a year ago. Imports for April gained 20 per cent. over the same month a year ago. For ten months the exports show a gain of 8 per cent., while imports gained 17 per cent.

In the east foundry pig iron is quite active, but at other points the markets are comparatively quiet, as was to be expected after the recent heavy buying movement. At the same time basic pig iron has been ordered rather freely by eastern steel-making interests. Foreign irons are still being ordered for shipment to this country, notwithstanding the higher prices overseas. The undertone as regards quotations is firmer in all markets. However, the preëminent feature of the week was the heavy buying of steel rails for 1908 delivery, the leading southern interest having booked orders for over 157,000 tons, while the Illinois Steel Company received contracts for 155,000 tons, and the Pennsylvania Railroad has allotted its order for 142,600 tons for 1908 delivery. Additional tonnage is pending, and it is figured that the mills have upward of 500,000 tons booked for 1908. Structural material is in fair demand, merchant pipe is up $4 a ton, fairly large contracts for riveted pipe have been placed, good business in plates is looked for, specifications on tinplates and sheets are heavy, and implement makers are ordering steel bars more freely. Bar iron and coke are still weak in price, while old material is irregular. Copper is a little lower; business is quiet, demand being for immediate requirements only, while production is increasing.

The New York stock market is exceedingly dull, speculative interest having been very largely diverted to wheat. Adverse crop reports are also calculated to restrict interest in stocks, and nervousness regarding the agitation against railroads was illustrated by a selling movement in Union Pacific on the appearance of a rumor that the Interstate Commerce Commission had adopted a report severely condemning the policy of that corporation. Bonds were affected by continued liquidation in Lake Shore 4s, presumably by members of the recently dissolved syndicate. Foreign exchange continues strong at figures but little under a point at which gold could be shipped to Paris from New York. Demand sterling is 4.86.85.

Bank clearings for the week ending May 16 aggregate $2,817,502,000, 1 per cent. under last week and 4.7 per cent. below this week last year. Outside of New York exchanges amount to $1,161,576,000, four-fifths of 1 per cent. over last week and 17 per cent. over the corresponding week last year.

Business failures for the week ending May 16 number 184, against 154 last week, 161 in the like week of 1906, 191 in 1905, 215 in 1904 and 155 in 1903.

Wheat, including flour, exports from the United States and Canada for the week ending May 16 aggregated 2,800,177 bushels, against 2,994,419 bushels last week, 2,716,783 bushels this week last year, 1,512,550 bushels in 1905 and 5,172,634 bushels in 1902. For the past forty-six weeks of the fiscal year the exports are 149,595,083 bushels, against 118,464,994 bushels in 1905-06, 56,004,979 bushels in 1904-05 and 225,602,907 bushels in 1901-02. Corn exports for the week are 1,906,908 bushels, against 1,744,800 bushels last week, 1,089,706 bushels a year ago and 1,688,299 bushels in 1905. For the fiscal year to date the exports are 65,079,645 bushels, against 106,500,789 bushels in 1905-06 and 73,095,684 bushels in 1904-05.

IN CANADA.

The cold, late spring affects Canadian retail trade, and in turn is reflected in slower wholesale trade and collections. The slackness of reorder business gives less concern, however, because manufacturers and wholesalers were and are so generally behind on deliveries. A fair business is being done on fall account, and prices are firm. The wheat crop will be seeded very late, and a decrease in area is probable. Uniformly good weather is a requisite from now on. Montreal reports the farmers busy on the land, and retail trade in Quebec is affected thereby. The longshoremen's strike affects shipping. Toronto reports retail trade light, but fall trade is good. Western collections are slow. In Manitoba farmers are busy seeding. Collections drag, and real-estate speculation is reported attracting money. Failures for the week numbers 22, as against 18 last week and 15 in this week a year ago. Clearings for the week aggregate $85,866,000, an increase of a fraction of 1 per cent. from last week, and a gain of 12 per cent. over this week a year ago.

THE CROPS.

WHEAT-CROP OUTLOOK MORE OPTIMISTIC. SLIGHT IMPROVEMENT IN WINTER WHEAT NOTED LAST WEEK CONTINUES. WEATHER STILL RETARDS GROWTH. INSECT DAMAGE REPORTS IRREGULAR. FAIR PROGRESS WITH SPRING SEEDING. MINNESOTA AND SOUTH DAKOTA NEARLY FINISHED. MUCH SEEDING TO BE DONE IN NORTH DAKOTA. EXCELLENT OUTLOOK IN RED RIVER VALLEY. IN CANADA 10 TO 20 PER CENT. DECREASE POSSIBLE. ALL DEPENDS ON WEATHER. CORN PLANTING RETARDED. OATS SPOTTED. COLD, WET WEATHER RETARDS COTTON PLANTING AND GROWTH. CROP RESEEDED THREE TIMES IN PLACES. TEXAS COTTON ONLY AN AVERAGE ONE.

IN THE NORTHWEST.

ST. PAUL.—In North Dakota only 50 per cent. of the land set for wheat has been planted, and only 75 per cent. of last year's acreage will be planted with wheat, on account of the backwardness of the season. Lack of help will also lessen the acreage. Oats, barley and flax will be substituted. The large amount of fall plowing has greatly benefited the soil, which is in fine condition, and is workable between 10 and 4 o'clock daily. In Minnesota conditions are more favorable, 85 per cent. of the wheat has been planted, and growing grain has not been injured by cold weather, though it has been greatly retarded. With good growing weather from now on, the indications are for a 75 per cent. crop in the northwest.

MINNEAPOLIS. — Considerable progress has been made in agricultural operations during the past week. Wheat seeding is all done in South Dakota and most of Minnesota, except in some northern localities. In North Dakota at least 80 per cent. of the wheat crop is in, and seeding will be completed in two or three days. In the Red river valley conditions, on the whole, are more favorable than for some years at this time. Decreased wheat acreage has been expected, but higher prices may offset the loss in that respect. Conditions, on the whole, are favorable now, but much depends on future weather.

DULUTH.—The outlook for spring wheat is, on the whole, good. Seeding has been retarded somewhat by cold weather, but by the end of this week seeding will be all finished, except in northern North Dakota. The crop has been a failure in the Red river valley for several years past, but the outlook this year is excellent. It is probable that if cold weather continues much longer other crops will be planted in those sections not already seeded, but the area sown will be about the same as last season.

SIOUX FALLS.—Crop conditions show some improvement, and there is yet time to mature a crop, provided seasonable weather is had from now on. Seeding of wheat is finished throughout the state, and the plant is up in the southern portion and shows good color. Seeding of oats and barley is finished in the southern half and well advanced in the northern portion. Night frosts and heavy snow on the 14th caused little damage, except on the lowlands. Some corn has been seeded. Warmer weather now prevails.

DAVENPORT.—While the weather has been too cold for crop growth, no especial damage is reported.

DES MOINES.—Spring-wheat acreage in Iowa is increased over last year 25 per cent., but damage from cold weather will place the yield at about former figures. The season is very backward for cereals. General rains and warmer weather are essential to a fair, average season.

IN CANADA.

WINNIPEG.—The late spring has delayed seeding operations very much in Manitoba and Saskatchewan, and sowing did not become general until about one week ago. Fine weather has since prevailed and farmers are busy. Indications, however, are that this year's acreage

will not equal last year's, and opinions vary as to the shortage, it being estimated at from 10 to 20 per cent., though with continued fine weather the shortage may be smaller. Most land not sown in wheat by June 1 will be seeded with oats and barley.

IN THE WINTER-WHEAT BELT.

CHICAGO. — Winter - wheat conditions are slightly improved. Warmer weather has prevailed, but unusually low temperatures have generally retarded growth. Frosts over a good part of the southwestern and western wheat belts have not helped the plant where it is jointed, and with ice forming in parts of Kansas, there are assertions that the crop has been injured more or less. Green bugs are said to have disappeared from southern Kansas owing to the activity of parasites, but are spreading over other parts of the state, and are becoming more active in Nebraska and Missouri, and are claimed to have been discovered as far east as Pennsylvania. Army worms have appeared in parts of Missouri and Kentucky. Reports from all sections of the wheat belt do not indicate a crop of over 400,000,000 bushels, and perfect conditions till harvest are necessary to maintain this estimate. Spring-wheat seeding in the northwest has progressed as fast as weather conditions would permit, but is late, and a decreased area is expected. Plowing for corn has progressed well, but planting is delayed by rains and cold weather in some sections. Oats are doing fairly in Illinois and Indiana, but rather poorly in Oklahoma, Kansas and Nebraska, the crop, on the whole, being spotted.

INDIANAPOLIS.—Unfavorable reports regarding the wheat crop continue to come in from all parts of the state, only a few localities reporting good prospects. Good weather from now on would probably bring about an improvement. Considerable oats have been planted and the condition of the crop at this time is said to be good.

CINCINNATI.—Wheat has improved in spite of seemingly adverse conditions. Oats are coming along all right. Corn planting is delayed by continued rainy weather. Apparently, about 10 per cent. of the wheat sown has been plowed up.

ST. LOUIS.—Reports from country correspondents and special personal investigation on the part of our representative indicate that winter wheat is in almost as good a condition as last year, though it is from two to three weeks late. Up to the present there is practically no damage to wheat in Missouri and very little in Kansas. However, the crop south of that section has been injured to a considerable extent. Corn planting is much retarded, but with good weather there is still ample time for that crop. Receipts of wheat, which have largely swelled the visible supply throughout this section, would hardly indicate much damage to the growing crop.

OMAHA.—Cold weather has retarded growing crops. Some damage has been done to wheat by the green bug in the southern part of the state. On account of the late season, corn seeding has been delayed considerably.

KANSAS CITY.—Conflicting reports as to the condition of growing crops are received, but it is conceded that the green bug has made no further headway in Kansas, and winter wheat in that state, while retarded by cold weather, shows improvement. The weather has interfered with plowing and spring seeding.

WICHITA. Wheat damage is now estimated at over 50 per cent. Growing oats are in a worse condition. Corn is threatened.

ST. JOSEPH.—Wheat in this territory is backward, but with future favorable conditions, prospects for an average crop are considered good.

OKLAHOMA.—Crop prospects are much improved by the advent of fair weather. Peaches promise an enormous crop, and excellent prices are assured.

PORTLAND, ORE.—Crop prospects are good.

SAN FRANCISCO.—The outlook for fruit, especially in the upland sections, has improved.

SPOKANE.—Reports continue to give promise of a large wheat crop.

AT THE SOUTH.

CHARLESTON.—Farmers are actively engaged in chopping cotton, and prospects are much more favorable than at this time last year. Corn is doing well.

RICHMOND.—In eastern North Carolina the early crop of strawberries was less than one-half of the average, but this shortage was offset in a large measure by higher prices. Conditions are favorable for the late crop, which, from present prospects, will exceed that of last year. Insects and cold weather have wrought considerable damage to tobacco plants, and reseeding has been necessary in some instances.

JACKSONVILLE.—With drought well broken, the crop outlook is much improved.

ATLANTA.—Continued cold and wet weather is retarding the cotton crop, and in some sections farmers have replanted two or three times and have been unable as yet to obtain a good stand.

MONTGOMERY.—Excessive rains have prevented farmers from replanting, their first being destroyed by cold weather, and at present cotton is three weeks to one month behind. In many sections scarcity of seed is being felt, and a great many will not be able to plant a full crop.

MEMPHIS.—Crops of all kinds are retarded by cold weather and excessive rains. In many instances cotton has been planted three times. Some planters are experiencing difficulty in securing seed for planting.

LITTLE ROCK.—Unseasonable weather, with heavy rains, retards farm work, and the outlook is the worst in many years.

NEW ORLEANS.—Frequent rains, with unseasonable temperature, have had an unfavorable effect on crops. In places the damage has been severe, but, on the whole, the crop is in better condition than exaggerated reports would indicate. Clear, warm weather would soon bring about promising conditions. Rice and sugar cane are doing rather well, though cane fields need working.

DALLAS.—The corn crop is looking fairly well, and while the cotton crop is in fair condition, there will be a considerable amount of replanting. Warm weather is absolutely essential at this time.

FORT WORTH.—Texas crop prospects this spring are not up to the usual average. Cotton is small and late, and many acres have had to be replanted. Wheat and oats will be very short, but the corn crop is promising. The indications are the corn crop will also be considerably supplemented this year through the general planting of Mexican June corn.

WACO.—Dry and hot weather is needed to bring cotton and corn forward fast. The cotton season is an average one.

TRADE REPORTS.

At New York a good, steady business in most departments of the dry-goods trade is being done. Dress goods and silks are in good request. Cottons are active and prices well maintained. There has been a slight falling off in woolens, but the clothing trade is fairly good. The cold season has very seriously affected the shirt-waist trade, and business in that line is poor. Collections generally are good. Wholesale dealers in cotton yarns report a difficulty in obtaining goods from both foreign and domestic spinners. Demand continues greater than the supply, and prices of all grades are high and firm. Woolens and worsted yarns are also in request. Raw silk is quiet but has an upward tendency. The cloak and suit trades are somewhat inactive; orders for future delivery are light and collections slow, but unseasonable weather is believed mainly responsible. The millinery trade is also affected by the same cause, and business generally is poor. There has been some diminution in orders for knit goods and hosiery, but most dealers do not complain of this and say that it will only relieve the market, some grades of goods being still scarce. Manufacturers of gloves and shirts are finishing up the season with increased sales. Wholesale grocers continue to complain of dull trade and that business is not equal to that of last year. Retail trade is somewhat quieter, and high prices at first hand reduce profits. Butter has fallen 3 cents on heavy receipts. Eggs, which are being received in large quantities, are unchanged in price, the excess supply being placed in storage instead of being put on the market. Flour receivers report a fairly active trade for the week, the sharp advance in wheat making some demand, which was supplied at an advance in price. Business in hard fiber cordage shows some improvement, but it is not so good as in May, 1906. Prompt shipment of cotton cordage is reported to be almost impossible, with no relief in sight. The anthracite coal trade is fairly active. In tinware, enameled ware, woodenware, china and glassware trades there has been a considerable falling off in the volume of business and in orders for future delivery received. In the hardware and cutlery trades, although the season has been unfavorable, the volume of business keeps up remarkably well, and manufacturers report sufficient orders to keep them busy. In all the above trades collections have been rather difficult for the past month or more. Pig iron is in better demand, and structural steel is in fair request. Spelter is weak and lower, and copper is also in less demand. In the electrical goods trade collections are slow, but the volume of business is fairly large. The real-estate market is quiet. Conditions in the lumber and building materials trades are not satisfactory. Building operations have been curtailed, collections are slow, and much paper is being renewed. Cement is in active demand for many uses outside of the purely building line; the output is large, and prices are being held up to former figures. Manufacturers of cigars are doing a fair business, but collections are backward. The leaf-tobacco market is quiet; prices are firm and stocks low. In paper a very satisfactory business is being done so far as the securing of orders is concerned, but difficulty is experienced in having these orders filled by manufacturers. Collections are fair to good.

The following telegrams show trade conditions at the cities mentioned for the week ending May 17:

BOSTON.—Retail trade in dry goods is disappointing, owing to cold weather. Stocks are large. Collections are slow from dealers dependent on sales for money to pay accounts, but after a day or two of good shopping weather there has been improvement. Cotton goods are firm, with demand active for staple lines and supplies scant. Wages of 85,000 operators in Fall River, New Bedford and Rhode Island have been advanced 10 per cent. This and the high cost of cotton are elements which are expected to sustain a high level of prices for goods. Prints are active and higher. Drills, sheetings and ducks are strong and tend upward. In dress goods for spring, voiles, panamas, mohairs and novelties, there has been some slowing up in demand, owing to a prolonged strike of garment makers and to backward retail business. Prices of staples are firm, while novelties have declined materially. Shoe jobbers are still holding back some of their fall orders, but whether from lack of confidence in the extent of business in sight, or in hopes of obtaining some advantage in prices, is not clear. The aggregate volume of business is good, but not up to hopes or reasonable expectations, particularly in the cheaper lines of footwear. A good fair demand is apparent for the different kinds of paper, and the tone is firm. The market for news paper is noticeably strong. Demand for paper stock is only moderately active. During the past week trade in furniture, carpets and upholstery goods increased, but collections continue slow. Trade in electrical goods is of good volume, and collections are fair. Pig iron, structural steel, sheet metal and iron pipe are very active. All lines of painters' supplies are active. Brick, lime and cement are in brisk demand. Retail coal trade continues good on account of continued cool weather. Wholesale liquor dealers report good trade. Retail dealers are inclined to place good orders. Leaf-tobacco dealers report ordinary trade. Manufacturing confectioners are busy.

PROVIDENCE.—Business in cotton goods is in excellent condition. Manufacturing jewelers are quite busy. The lumber trade reports a fair amount of business. Collections are slow

PORTLAND, ME.—The season is backward, which is retarding distribution of goods in the country. Wholesalers report an average volume of spring business. Very few sardines have yet been packed.

NEW HAVEN.—Business has been more or less affected by unsatisfactory weather. Dry-goods and clothing dealers are expressing considerable dissatisfaction owing to the material falling off in their sales. In some instances a slight lull is found in manufacturing lines, although conditions in this direction are quite satisfactory on the whole. Some apprehension is being expressed by fruit and produce dealers owing to low temperatures prevailing. Considerable complaint is heard owing to slowness in collections, although money appears to be obtainable at fair rates.

PHILADELPHIA.—Wool continues quiet, spinners having supplies sufficient to carry them till the new clip comes in. Manufacturers have nothing new to report, and cotton yarns are still in demand, fine numbers particularly. Dry-goods jobbing has not been very active and collections are reported, as a rule, rather tardy. Chemicals and dyestuffs are slow, but prices are firm for staple grades. Paints and glass are disappointing, and the movement of merchandise is not up to expectations, but prices continue firm. Lumbermen say there is a little more activity, especially in retail lines, since the labor dispute settlement, building operations now being in full swing. There is no quotable change in prices. Collections are not improved. Hides and skins have a little better tone, due to better quality of skins coming into the market. The volume of business is fair. Leather is unchanged, with spasmodic business and continued high prices. Wholesale boot and shoe dealers report improved business, with unusually heavy demand for tan goods, the supply of which is not overly heavy. Tobacco users have stocks of most lines, and are looking for jobbers to tire of carrying what they have. There is some inquiry for goods, but sales are moderate; collections being slow. Liquors sell more slowly than usual at this season and collections are hard to make. There is no abatement whatever in the demand for pig iron. Finished material, however, is slightly less active. The drop in price of anthracite coal April 1 prompted many to anticipate their winter's supply, with the result that demand for domestic coal has since been good.

PITTSBURGH.—Pig iron is quiet but very strong, There have been a good many inquiries for third and fourth quarter iron, but owing to the scarcity could not be considered. Present quotation for both Bessemer and basic iron for last-half delivery is $23.50 at the furnaces. The furnaces recently out of blast in the valley are now in operation, and all are being operated to full capacity, and there is no abatement of activity with the finishing mills. Coke has now reached a level that will probably be maintained for some time. Nominal quotations at valley furnaces for pig iron for immediate delivery are as follows: Standard Bessemer, $24; chilled basic, $24; No. 2 foundry, $24 to $25, and gray forge, $22.15. Standard Connellsville furnace coke is quoted at $2.25 to $2.40 and foundry coke $3.

BUFFALO.—General trade tends to increase owing to the settlement of strikes. Collections are good, and the live-stock market remains active, with prices steady.

BALTIMORE.—Sales have increased with more seasonable weather for the first time in several weeks. Jobbers in dry goods and notions report a fair amount of filling-in business, though fall orders are not so large as anticipated. Shoe dealers report a good fall trade, but immediate sales are only moderate. In millinery, jobbers are rounding up a very successful season with a satisfactory filling-in business. Clothing manufacturers report a good fall order business, with spring business about over. Business in hardware is good. In paper business is good. In woodenware business is fair, with prospects of an advance in price owing to scarcity of raw material. Due to suburban residential building, there is an increased demand for building material. Collections are better in many lines.

CINCINNATI.—General trade continues brisk. Demand for money has increased.

CHICAGO—Trade conditions have not changed materially, although somewhat moderated by unfavorable weather. Retail business has slightly enlarged the last few days on more springlike temperatures. Sales of dry goods for fall delivery continue good, but house trade is only fair. Clothing and shoes are having a moderate sale. Northern pig iron is up 50 cents per ton on fair sales. Business in steel rails and plates is fair. Lumber is selling freely locally, but shipments to the interior are only fair. Groceries are less active. Receipts of

cattle and hogs increased, but sheep decreased. Prices are slightly lower on hogs and cattle and steady on sheep. Money is easy. Deposits are increasing, and loans are decreasing. Country banks are large buyers of paper. Collections are fair.

PEORIA.—Warmer weather has stimulated trade and both jobbers and retailers report satisfactory sales the past week. Collections are fair.

LOUISVILLE.—Fair weather, lasting only a few days, greatly stimulated retail trade. Business in all jobbing and manufacturing lines is good. Dry-goods merchants report business fully up to the average of this time last year. Clothing manufactures say their fall business is coming in nicely. Hat jobbers claim a large increase over last fall's business. Whiskey is advancing in price and demand is strong. Drugs and grocery wholesalers report business good at firm prices. Collections are improving somewhat.

ST. LOUIS. -- Unseasonable weather affects retail trade, and jobbers are suffering, as it has retarded filling-in orders. However, orders for future delivery of shoes and dry goods are still ahead of last season. Collections are better than were anticipated, which is an indication of the good condition of country merchants. Country banks report a comparatively light demand for money and may continue to loan on commercial paper falling due in the early fall.

KANSAS CITY.—Wholesalers in leading lines feel the effects of unfavorable weather in the country, particularly in sales for immediate shipment and in collections. Orders for future delivery, however, compare favorably with a year ago. Unseasonable weather retards retail trade. Demand for lumber and building material is active.

MILWAUKEE.—Trade is unsatisfactory, due to weather conditions. Collections are fair.

SIOUX CITY.—Business is still affected by the weather, and collections are slow.

DAVENPORT.—Retail trade is very quiet and below last year's, owing to cold, disagreeable weather. Manufacturers are busy. Jobbing trade is fair. Collections are a trifle slow.

ST. PAUL.—Trade in all lines is in excess of last year's. Collections have been good with lines having the 10th as discount date, and other lines find collections fair.

CHARLESTON. — Wholesale trade is a little quiet, though jobbers are receiving a fair number of orders for fall shipment. Collections are slow.

RICHMOND.—Lumber is active throughout Virginia and North Carolina. Building is active. Manufacturers of boxes, shooks and similar articles are doing an active business. Dealers in timber lands find ready sales at satisfactory prices. Jobbing business in most lines is fair, but not so active as it would be with more favorable weather. Retail trade shows some improvement. Collections are backward.

AUGUSTA.—Trade is good and collections are fair.

ATLANTA.—Wholesale dry-goods houses report a fair volume of business, but there is a tendency to curtail orders among some of the trade until the cotton crop is further advanced. Building continues active in the city.

JACKSONVILLE.—Shipments of vegetables are smaller but demand is better than usual. Real estate values are increasing; building is unabated; trade is normal and collections are fair.

BIRMINGHAM. — Southern foundry No. 2 pig iron is strong at $23. The supply is almost sold through the fourth quarter. The weather continues rainy and cool, which is affecting both wholesale and retail trade. Collections are a little slow.

MOBILE.—More favorable weather conditions are causing jobbers to send out salesmen for fall trade. Sales are up to expectations, but collections are only fair. Retail trade is light. Owing to shortage of home-grown fruits importers of bananas are making quick sales at good prices. Lumber for export is almost at a standstill.

MONTGOMERY. — Inclement weather retards business. Collections are slow.

CHATTANOOGA.—Business continues good, and collections are fair.

MINNEAPOLIS.—While general business is very good, considering the weather, being in excess of last year, settled seasonable weather is needed. Collections are better. Higher prices of wheat make for smaller sales of flour, but mills are still busy filling past orders. Demand for lumber is excellent, though building operations in the country are being curtailed by the weather.

LINCOLN.—Cold weather checks trade. Collections are fair.

OMAHA.—Unseasonable weather retards retail trade, but jobbers in leading lines report business in excess of last year. Collections are only fair.

SIOUX FALLS.—Warmer weather is needed to promote seasonable trade. Much complaint in dry goods and clothing lines is heard. Sales of groceries are fair. Collections are fair to good.

MEMPHIS.—Cold, wet weather prevailed up to Tuesday night and delayed wholesale and retail business. Two days of warm, clear weather created a more hopeful feeling. Collections are slow.

NASHVILLE.—Unsettled weather continues and trade is dull. Collections are fairly satisfactory. Retail trade is fair.

LITTLE ROCK.—Trade shows some improvement over last week, but is still below that of a year ago.

OKLAHOMA.—Retail trade, which has been dull, shows marked improvement.

NEW ORLEANS.—Retail trade is not up to expectations, and jobbers report less business than a year ago, but collections are good.

FORT WORTH.—Trade is dull.

DALLAS.—Heavy rains, with cold and unseasonable weather, have greatly restricted trade in all lines. Retail trade in the country is especially quiet. Collections are slow.

WACO. — Business is good and collections are fair.

SAN FRANCISCO.—Industrial unrest still hampers reconstruction and commerce. Street car and telephone facilities are still crippled, and a scarcity of labor exists in agricultural and mining districts.

SEATTLE.—Alaskan business has given some impetus to the local jobbing trade, but local demand is only fair. Collections are fair.

SPOKANE.—Business is good and collections are fair. Real estate is active.

TACOMA.—Trade is very satisfactory. Collections are fair. Real estate is active.

PORTLAND, ORE.—Jobbing trade continues to increase. Collections are good. Speculation in real estate is not so noticeable, but home building continues unabated.

TORONTO.—Trade activity has received a setback from unseasonable weather. Retail movement has been light. The unfortunate delay in wheat seeding operations has also helped to unsettle general conditions. Manufacturers' deliveries are still slow, and the business done so far this season has been exceedingly heavy. This being the case some quiet in trade at present is not very serious. Travelers out with fall lines report that they find business men generally hopeful, and that there is no sign of falling off in consumption. In most lines of business the season was opened with very light stocks in retailers' hands, and although buying was heavy during the first quarter of the year, there were many factors which tended to prevent any dangerous overpurchasing. The grocery trade is active, heavy shipments being made by water. The demand for goods in the west is large and it is equally so in northern Ontario. All lines of hardware are in brisk demand, a natural result of the industrial activity in all parts of the country. Money is little easier than it has been for some weeks. Collections from the east are fair to good, while those from the west are still slow.

MONTREAL.—The late spring has had the effect of quieting trade. The farmers are still busy, having been delayed at the start. The result is retail trade has been quiet in tone, and this has acted upon the demand for wholesale goods. The sorting trade in dry goods has been quiet, a circumstance which has been rather welcome than otherwise, owing to the fact that trade earlier in the season was of unprecedented volume. Values in all lines hold firm. Carpet prices are expected to go higher. Stocks of millinery trimmings are light. The hardware trade is brisk. The demand for metals is exceedingly active, railroads finding difficulty in securing needed rolling stock. Mills and foundries have plenty of work ahead for at least a year. The demand for shipping room is active, but trade is to some extent affected by the 'longshoremen's strike which is now in progress. The supply of cheese offering is still light, while butter is coming in freely and is easier in price. Collections are generally fair.

VANCOUVER-VICTORIA.—There is a fairly good tone to wholesale and retail trade here, and collections are generally fair. Provincial industries continue very active, and the demand for labor exceeds the supply. Collections are generally fair to good. The Pacific shipping trade is opening out well.

WINNIPEG—Trade is showing some improvement here and throughout the west, although the retail movement is not yet brisk. Farmers are now generally busy seeding. Wholesale sorting trade is a little quiet, but a good business is being done on account of fall. Collections do not show great improvement. From some districts they are fairly good, but from others they are still slow. It is reported that in many places westerners are still putting into real estate money that should go to creditors.

FINANCIAL.

Money Market.

Something of a deadlock has apparently existed in the Wall street loan market this week. Borrowers are not exhibiting any eagerness to obtain accommodation on time, this being due not only to the fact that stock houses are not carrying large lines of securities, but to their unwillingness to pay the rates demanded by banks and other institutions. Lenders, on the other hand, exhibit as a rule an indifference in respect to making long time commitments, and a 5¼ per cent. rate is firmly adhered to in respect to arrangements running over the beginning of 1908, while six months' money is quoted at 5 per cent. The attitude of the banks is attributable largely to the uncertainty as to whether the Secretary of the Treasury will call in government deposits largely in advance of the maturity of the 4 per cent. bonds on July 1, and the redemption of the remaining portion of the issue in question. Some attention has also been given to the renewed firmness of the foreign exchange market, leading to some talk of gold exportations to Paris. Throughout the week call money was in plentiful supply, and the renewal rate eased off to 2¼ per cent. Commercial paper was rather quiet, there being a fair amount of offerings, but the buying was of a limited character. The banks apparently gained some $3,000,000 cash this week, making it probable that to-day's Clearing House statement will be a favorable one.

New York Banks.

Trust companies and other institutions seem to have come back into the loan market last week. At the same time there was, apparently, a certain amount of speculative liquidation in stocks, and the decrease of over $14,000,000 in the average loans shown by the New York Clearing House statement published on last Saturday was attributed to these causes. The decrease in the average cash, amounting to $2,383,000, was very much in excess of the estimated losses to the Treasury and the interior, the occasion for this decrepancy being hard to find. The reduction in the deposits of $16,180,800 was, however, in pretty close agreement with the changes in the loans and cash, and the reserve requirements were consequently $4,045,000 less than the week before, so that the surplus increased by the sum of $1,661,600. The figures of the statement compare as follows with those of the preceding week:

	May 11	*May 4*	*Changes*
Loans	$1,126,223,600	$1,140,320,300	D. $14,096,700
Specie	212,484,800	212,884,500	D. 399,700

Foreign Exchange.

Conditions in the foreign exchange market at New York this week were, on the whole, rather quiet. There was no change in the rates of either the Bank of England or any of the leading continental institutions. The supply of commercial bills coming out here was rather restricted, and there was a pretty fair inquiry for remittances, although it seemed to be of a somewhat irregular character. The market was accordingly dull in the main, but manifested a rather firm tone, posted rates being steady at 4.84@4.87, and transactions in bankers' demand sterling varied very little at between 4.86.25 and 4.86.40. Later in the week, however, there was a better inquiry, and the actual rates for demand sterling advanced to as high as 4.86.55. At the same time there seemed to be some urgent buying of cables, which sold up to as high as 4.86.90. Continental bills were dull and, on the whole, featureless.

POSTED RATES OF LEADING DRAWERS FOR LONG AND DEMAND STERLING.

May 11	*May 13*	*May 14*	*May 15*	*May 16*	*May 17*
4.84 @ 4.87	4.84 @ 4.87	4.84 @ 4.87	4.84 @ 4.87	4.84 @ 4.87	4.84½ @ 4.87½

ACTUAL BUSINESS BANKERS' DEMAND STERLING.

4.86.20 @ 4.86.30	4.86.20 @ 4.86.40	4.86.25 @ 4.86.35	4.86.25 @ 4.86.40	4.86.40 @ 4.86.55	4.86.75 @ 4.86.90

ACTUAL BUSINESS BANKERS' SIXTY-DAY STERLING.

4.83.40 @ 4.83.45	4.83.40 @ 4.83.45	4.83.35 @ 4.83.45	4.86.40 @ 4.86.45	4.83.45 @ 4.83.50	4.83.75 @ 4.83.85

Closing quotations on Friday for actual business in other classes of bills were: Cables, 4.87.20@4 87.25; commercial bills, 4.83¼@4.83¾; francs, 5 20@5.16¼ less 5-64; reichsmarks, 94⅜ plus 1-32@95 3-16.

The Bank of England's discount rate remains unchanged at 4 per cent. Its return for the week ending Thursday showed a decrease of £636,201 in its gold, but the proportion of reserve to liability was 46.97 per cent., against 46.70 per cent. last week. The loss of gold was almost entirely to Paris, which is continuing to draw on London,

and as a result the Bank of France this week showed a gain of 8,575,000 francs in gold. Its discount rate is unchanged at 3½ per cent., the Paris market quotation being 3 7-16 per cent. At Berlin the bank rate is still 5½ per cent. and the market 4½ per cent.

New York Securities Market.

Apart from demonstrations in a few stocks, which were affected by special developments or influences, the New York stock market has been exceedingly dull during the whole week. Speculative attention has naturally been diverted from Wall street to the Chicago grain market, the wide fluctuations accompanying the rise in wheat prices and the enormous trading in that cereal making it the central point of interest. At the same time the adverse reports concerning crop conditions, even though there was some disposition in stock-market circles to consider them as involving exaggeration, have had a rather depressing influence upon sentiment in regard to railroad properties. The money market was also slightly firmer in tone this week. Lenders seem unwilling to put out funds on time at any concessions in rates, and while call money remains easy and brokerage houses as a rule are carrying only limited amounts of stocks, there is little inducement on the part of the latter to borrow at current rates on time. Some attention has also been paid to the chances for a reduction in the government deposits in the banks in order to provide for redemption of the remaining 4 per cent. bonds which fall due on July 1. It is to be noted that foreign exchange continues firm, rates being very close to the level at which London might cause gold to be shipped from New York to Paris. The latter market is still drawing rather heavily on the Bank of England, while it might be mentioned that recent developments here, including the unceasing emission of new securities and the anti-railroad agitation, seem to have altogether stifled any tendency on the part of foreign interests to participate in the American stock market.

In the early part of the week a certain amount of strength developed in Union Pacific and the other Harriman stocks, based on the news that a banking syndicate had been organized to underwrite the convertible bond issue which was brought out last week. On Wednesday, however, an unfounded statement that the Interstate Commerce Commission had completed a report on Union Pacific affairs, involving a sweeping condemnation of its management for the acquisition of the Southern Pacific property, as well as for its investments in other stocks, and the practical suppression of competition throughout a large territory, caused very heavy selling of Union Pacific and a marked depression in the Harriman group, which naturally had an effect upon the entire list. When it became known, however, that the story was without foundation, there was something of a recovery in Union Pacific, although the street continues to think apparently that some adverse action on the part of the commission, based on the investigation of the Harriman corporations and their methods, may ultimately develop. The local franchise properties were quiet and neglected, notwithstanding the fact that more or less unfavorable talk is heard about them, based on the probable passage of the public utilities bill at Albany. Delaware & Hudson was heavy on an attack upon its management made by certain stockholders at the annual meeting, and the later announcement of a coming issue of $10,000,000 equipment bonds also had an unfavorable effect. The General Electric Company has joined the ranks of the concerns which are seeking additional capital, the matter in this case taking the form of a $15,000,000 convertible bond issue. There was some bearish manipulation in Reading, American Smelting and Canadian Pacific, while National Lead developed unexpected strength. As a rule, however, the movements of prices were narrow and unimportant. On Friday the market was weak on the continued rise in wheat and the further strengthening of foreign exchange rates.

Bank Clearings.

[By Telegraph to BRADSTREET'S.]

BRADSTREET'S Bank Clearings Report for the week ending May 16 shows an aggregate of $2,817,502,000, as against $2,855,497,000 last week and $2,956,096,000 in the corresponding week last year. Canadian clearings for the week aggregate $85,866,000, as against $85,366,000 last week and $76,595,000 in this week a year ago. Following are the detailed returns by cities for this week and last, with percentages of increase or decrease as compared with this week in 1906:

Total	3,708,000	4,035,000	4,337,000

Statistical Situation of Cotton.

The aggregate world's visible supply of American and other cotton last week, as made up by the New Orleans Cotton Exchange, is shown, with comparisons:

Week ending	*May* 10, 1907	*May* 3, 1907	*May* 11, 1906
American	3,191,069	3,368,197	2,537,774
Other kinds	1,422,000	1,455,000	1,550,000
Total	4,613,069	4,823,197	4,087,774

Of the world's visible supply, as above, there were afloat for or held in various countries on the dates given the following quantities:

	May 10, 1907	*May* 3, 1907	*May* 11, 1906
Great Britain and continent	2,762,000	2,888,000	2,010,000
Egypt	144,000	166,000	118,000
India	804,000	812,000	1,070,000
United States	903,000	957,000	890,000
Total	4,613,000	4,823,000	4,088,000

Following will be found the movement of cotton into sight for the week and season, as compiled by the New York Cotton Exchange:

	This week	*Last week*	*Last year*
Week	82,074	81,660	109,026
Season	12,833,218	12,748,144	10,259,495

Boston Shoe and Leather Market.

Hemlock sole leather is well sold up, inferior grades finding ready sale and desirable lines being sold in advance of receipts. Prices are very firm. Middle-weight union sole backs have been advanced 1 cent a pound. Light union sole is in better demand. Oak sole is sold ahead. Rough leather is weaker, conditions favoring concessions to buyers. Grain leathers are more active. Some large sales have been made in satin and kangaroo grain. Although this is supposed to be between seasons for patent and enameled leather, sales of very satisfactory amounts are reported. Hides are showing an upward tendency. Ohio buffs have sold at 11 cents for No. 1 quality. Calfskins are unsteady. Reports from Russia foretell a shortage from that source of supply. More orders for fall footwear are coming along each week, but from all reports, shoe manufacturers are still hoping for more business than they have received. Manufacturers of the cheaper shoes appear to be doing less than their usual amount for the season, and the statement is made that the tendency everywhere is to buy more of the better grades. Brockton factories are said to have all that they can attend to in the better grades of men's wear. Wholesalers bring up the matter of prices, but no recessions are in sight with leather and findings at present figures. Shipments are in good volume, but not quite up to last year. The *Shoe and Leather Reporter's* figures this week are as follows: Last weeek, 104,716 cases; preceding week, 98,472; total for 1907, 1,814,415; total for 1906, 1,863,848; decrease, 49,433.

Boston Wool Market.

The deadlock between buyers and growers in the west has been broken to a certain extent, and the new clip is being moved in fair-sized quantities, especially in Wyoming and Idaho. Transactions are being made, however, at prices which mean that the Boston market must advance moderately to show a fair profit to dealers. In Wyoming sales have been made at 19@21 cents, costing 63 cents and upward scoured and laid down in Boston; the average condition of the clip in this state is lower. The Idaho clip is in good condition and has sold at 18@18½ cents. Eight months' new Texas has sold at 18@20 cents, costing 60@62 cents, scoured, in Boston. Northern California spring wool brought 24@24½ cents, about the same as last year. The new Arizona wools are bringing 23@24 cents for fine and fine medium and 26@27 cents for half blood. In the Boston market trade is very quiet and there is an oversupply of clothing wools, as scoured territories, quarter blood fleeces and super pulled are not cleaning up well. The improvement in the woolen goods market and the firm closing of the London sales, however, has strengthened the position of the dealers, and they are less inclined to let their wools go till they show a profit. Quarter blood fleeces are not selling, but are holding firm; low B supers have sold at 42 cents; combing wools are in fair demand. The London sales closed very firm Wednesday, with sales of 4,000 bales for America; fine merinos and fine crossbreds were fully sustained, and low crossbreds recovered a little from the weak opening. The confidence of holders in England and Australia in the future of the market is shown in the withdrawal of nearly 10 per cent. of the total offerings.

Trade Openings Abroad.

A mercantile firm, the identity and location of which may be obtained from the Bureau of Manufactures, Department of Commerce and Labor, has a sample set of brass dishes which purport to be the table dinner set of a Korean gentleman. The concern writes to the Bureau of Manufactures that it has a tentative order for fifty sets of these dishes to be made in aluminium, and desires to hear from manufacturers in the United States who would be interested in supplying them. The sample set weighs about fifteen pounds and consists of fifteen pieces, each with a tight-fitting cover. The firm in question states that it will submit sample and details to any manufacturer interested.

CLOTH FROM PAPER.

Several months ago there appeared in American trade papers a brief description, taken from a German newspaper, of the appearance of garments for men and women the principal constituent of which was paper. At the request of the Department of Commerce and Labor, American consular officers in Saxony, in which section of the German empire the paper fabrics were located, were instruced by the Department of State to inquire into the correctness of the reported discovery. In response the following report has been furnished by Consul Carl Bailey Hurst, of Plauen, who also furnished the Bureau of Manufactures with samples of the paper textiles:

"Paper yarn, termed 'Xylolin,' has been successfully used in a wide range of textile fabrics. The utilization of paper wood fiber in this new and practical way and the extreme cheapness of the new material compared with other yarns now in use is really a remarkable achievement. It should be said that this is not a haphazard discovery, but rather the logical result of years of painstaking study and experimentation. After the final development of the theory at first in mind into tangible material for all manner of uses in textile industries, the paper thread and yarn, loose or tightly spun, of all thicknesses, have since been woven into almost every conceivable fabric and tested and retested, until the invention has become an important commercial success. The paper yarn has extraordinary wearing properties, and as the full scope of its usefulness has probably not been determined, it will, in all likelihood, lend itself to other purposes yet to be discovered.

"It should be understood that xylolin is wood fiber spun into a paper thread or yarn, and may be woven into any desired fabric. Although of the same material as paper, xylolin is not used in sheets and has nothing whatever of the nature of papier-maché or any substance such as may be molded or cut in blocks. It is primarily a thread or yarn and is employed exclusively in weaving. The looms used in the manufacture of most textiles do not have to be especially constructed for this substance, although they may have to be slightly adapted for its readier manipulation. A carpet loom of almost any kind can employ this new yarn. A loom that is used for weaving linen or cotton fabrics of fine or loose mesh can readily take the finer kinds of the paper thread. The thread is not brittle, it does not have a hard surface, and it neither shrinks nor stretches to any appreciable extent. Having certain resilient qualities, it cannot be readily crushed or dented like paper, and on it moisture has practically no effect. It is a serviceable substitute for cotton, jute, linen and even silk. When bleached the yarn or thread is of a snowy whiteness, and at a first glance cannot be distinguished from cotton. It can be woven to appear as homespun linen. It combines the good qualities of cotton and linen at one-third of the price of cotton and one-tenth of the price of linen.

"Being paper, it can be more readily dyed in delicate shades, far outmatching the range of colors to which cotton or silks are susceptible and vastly more than those of linens. The process of dyeing the thread or yarn is patented, and appears to be of such perfection that no colors, from the daintiest nuances to the richest hues, are affected by strong light. If it should be the wish of a manufacturer to combine the paper thread or yarn with other materials to gain the cheapness of the new substance, it can be readily done. It can be run in greater or less quantity as may be desired. Ninety-five per cent. of the material used in the thread is cellulose, such as is used for newspapers, and 5 per cent. cotton, but, of course, subjected to entirely novel treatment before spinning. The crude materials in this proportion are consequently very cheap compared to other vegetable fibers used in weaving, and this alone will make its place in the textile market permanent. Already factories are busily at work in England and in Bohemia, as well as in Saxony, turning out the paper thread and yarn, which is bought by textile manufacturers for use in their mills. It is the business of the inventor to supply the spun paper and not, with the one exception of floor coverings, to make up the multitude of articles which can be woven from xylolin.

"Among the various fabrics in which the greatest amount of work has thus far been accomplished is the making of rugs and carpets, and at the factories of the inventor paper floor coverings are woven in great quantities, and are already being exported to the United States and elsewhere with marked success. Here the yarn of heavier quality, woven into beautiful designs, is found to possess advantages over certain classes of floor coverings. They can be turned out in any thickness as rugs, mats or carpets. They are elastic to tread, do not retain dust readily, and are easily cleaned by beating or washed without fear of injury. Unpalatable to moths, they are not eaten by these insects. The paper floor coverings naturally do not possess the properties of rich Persian carpets, but are adapted to uses to which oriental rugs can be ill put. Although they can be made in pile, they are at present manufactured chiefly after the manner of an ingrain carpet, but in finely wrought, artistic patterns. They are clean and fresh, and particularly suited to summer homes and veranda use.

"Another great field for the paper yarn is in the manufacture of bagging, being a practical substitute for the more expensive jute. It has been found best, however, in making sacks to mix one thread of jute with two of paper. The combination secures the advantages of jute gunny cloth and the lightness and cheapness of wood paper. Closer woven, equally strong and at one-half of the cost, it can replace with advantage the jute sacking now in general use. Inasmuch as the production of jute is localized and the demand for it steadily increases, xylolin used in place of jute for sacks will make those who have hitherto used jute sacking in large quantities more or less independent of the jute market, with the high prices now prevailing. Sacking made of the combination of xylolin and jute seems to be a cleaner and a neater fabric and not as heavy. The output of this combination paper sacking is already of great proportions, and it is estimated that in the near future the new

sacking will be a formidable rival of the jute now in use the world over.

"The spun paper fiber has been woven into outing hats for men and women. 'Canvas' shoes and slippers have been made of it at nominal cost. Some idea of its adaptability for towels may be gathered from the fact that last year alone 7,000,000 pieces were made and sold, and it is likely that not one purchaser in a hundred but thought he was buying linen toweling at bargain prices. These are wholesaled at about 24 cents a dozen, medium size. It should not be thought that the new fiber is put upon the market as a crafty imitation, but makers of many sorts of textiles have found it so serviceable that they use it for mixing with other thread and yarn or weave it alone.

"Wonderfully successful have been the essays in making wall hangings and furniture coverings. When used for mural decoration, the material may be either nailed or applied with paste, and the delicate coloring that the paper fiber takes renders the effect of the tapestries singularly effective. For upholstering veranda furniture the material has an unusual advantage beyond its merits of decoration, because it is not subject to injury by light or dampness or even by rain.

"For certain grades of wearing apparel the new paper fiber has in itself an important sphere. The readiness with which yarn can be made up into cloth of any design or shade makes its use in this regard easy and successful. One peculiar feature when the paper thread is used in garments for clothing of medium thickness is the resultant warmth. It possesses the advantage of lightness in comparison with an equal bulk of linen or even cotton. The cost of the material for a full three-piece suit of clothes of average weight is not over $1. In lighter weights it is particularly adapted to outing costumes. It can be made to look like a good grade of ducking, and is an excellent material for wear in the tropics. For workmen's jackets and blouses and overalls it can be made up in brown and blue at half the cost of the material usually employed."

BRADSTREET'S

ADVERTISING DEPARTMENT.

BRADSTREET'S is issued every Saturday, and goes to the better class of business and professional men of this country and Europe—including bankers, lawyers, railroad and insurance officials, merchants, manufacturers and public men. It has a larger and choicer paid subscription list than any similar periodical in the world.

SUBSCRIPTION, FIVE DOLLARS A YEAR.

ADVERTISING RATES, SINGLE INSERTIONS, DISPLAYED, 25 CENTS A LINE, AGATE MEASURE.

INSURANCE

1850—1906.

The United States Life Insurance Co.

IN THE CITY OF NEW YORK.

JOHN P. MUNN, M. D., - PRESIDENT.

FINANCE COMMITTEE:

JAMES R. PLUM, - - - - - - - Leather.
CLARENCE H. KELSEY, - Pres't Title Guarantee and Trust Co.
WILLIAM H. PORTER, - Pres't Chem. Nat. Bank

Good men, whether experienced in life insurance or not, may make direct contracts with this Company, for a limited territory if desired, and secure for themselves, in addition to first year's commission, a renewal interest insuring an income for the future. Address the Company at its Home Office, No. 277 Broadway, New York City.

SPECIAL NOTICES

"You cannot get something for nothing."

Our motto has always been the lowest price consistent with quality. In

Carter's Ribbons and Carbons

the prices may vary, the quality never. **A penny more here** means a **dollar saved there.** There are **cheaper** Ribbons and Carbons. There are no **better.**

Use Carter's.

The Bradstreet Press,

Printing and Bookbinding,

49 Lafayette Street.

WITH one ribbon and its new three-color device

The New Tri-Chrome Smith Premier Typewriter

is virtually three typewriters in one. It produces indelible black, purple copying or red typewriting at the will of the operator. One ribbon and a small, easily operated lever do it all.

This machine permits not only the use of a three-color ribbon, but also of a two-color or single color ribbon. No extra cost for this new model.

THE SMITH PREMIER TYPEWRITER CO.
SYRACUSE, N. Y.

FINANCIAL

THE CITIZENS CENTRAL NATIONAL BANK

OF NEW YORK

Is able and willing to meet the demands of its customers, and offers a service which is proving highly satisfactory to merchants and manufacturers.

St. Louis, Mo. 302 Broadway, N. Y.

Union Pacific Railroad Company.

TREASURER'S OFFICE, 120 Broadway.

New York, N. Y., May 10, 1907.

To the Stockholders of the Union Pacific Railroad Company:

Pursuant to a resolution of the Board of Directors, adopted May 9, 1907, and subject to the approval of the stockholders, for which purpose a special meeting has been called to convene June 15, 1907, the privilege will be given to the holders of the Preferred Stock and Common Stock of the Company to subscribe upon the terms and conditions hereinafter stated **on or before July 10, 1907,** for an amount of the Convertible Bonds, hereinafter described, equal to twenty-five per cent. (25%) of their respective holdings of the stock of the Company **as registered on its books at 3 o'clock P. M. on May 29, 1907.** The bonds referred to will be Twenty-Year Four Per Cent Convertible Gold Bonds of the Company, of an authorized issue not exceeding $75,000,000. **The bonds will be convertible at the option of the holder at any time after issue and prior to July 1, 1917, into paid-up shares of the Common Stock of the Railroad Company at $175 per share.** The entire issue, but not any part thereof, may be called for redemption by the Company on July 1, 1912, or on any semi-annual interest day thereafter, on ninety days' notice, at a premium of 2½ per cent. and accrued interest, but if so called during the conversion period, may be converted up to thirty days prior to the date named in any notice for redemption. Adjustment of accrued interest and current dividend will be made at the time of conversion

The bonds will be repayable on July 1, 1927, and will bear interest from July 1, 1907, at the rate of four per cent. per annum, payable January 1st and July 1st. Both principal and interest will be payable in gold coin of the United States of or equal to the present standard of weight and fineness, without deduction for any tax or taxes which the Railroad Company may be required to pay thereon or to retain therefrom under any present or future law of the United States of America, or of any State, county or municipality therein. They will be issued as coupon bonds each for the principal sum of $500 or $1,000, with privilege of registration as to principal and exchangeable for registered bonds without coupons, each for the principal sum of $500 or any multiple thereof that may be authorized by the Board of Directors. The registered bonds will be exchangeable for coupon bonds.

Warrants signed by the Treasurer or an Assistant Treasurer will be issued to each stockholder as soon as possible after the closing of the books on May 29, 1907, specifying the amount of bonds in respect of which the stockholder is entitled to a subscription privilege. Subscription warrants, entitling the holder to subscribe as hereinafter stated, will be issued only for amounts of $500, or multiples thereof. For each fraction of a $500 bond in respect of which a stockholder is entitled to a subscription privilege, a fractional warrant will be issued which, if presented on or before **July 5 1907,** with other fractional warrants aggregating an amount of $500, will be exchangeable for a subscription warrant for a $500 bond; and, if the surrendered fractional warrants include a fraction in excess of $500, a new fractional warrant will be issued for such fraction.

On the back of these warrants will be two forms: the first to be filled out and signed by the stockholders in case they desire to subscribe or by their assigns; the second form which is an assignment, is to be filled out and signed by the stockholders only in case they desire to dispose of their privilege.

Stockholders who may wish to subscribe for a portion of the bonds covered by a warrant and dispose of the balance, or who may wish to dispose of a portion of the bonds covered by a warrant to one person and the balance to another, should return their warrants to this office on or before **July 5, 1907,** to be exchanged for other warrants, specifying in writing the number of warrants desired in exchange and the number of bonds to be covered by each.

The price of subscription, payable in New York funds, is:

$900 together with a sum equal to the accrued interest per $1,000 bond;
$450 together with a sum equal to the accrued interest per $500 bond.

The price will be paid in instalments as follows:	Per $1,000 Bond.	Per $500 Bond.
At the time of making subscription, on or before July 10, 1907	$200	$100
On or before August 9, 1907	200	100
On or before Sept. 10, 1907, (which includes adjustment of accrued interest)	505.42	252.71

Subscriptions may be paid for in full at the time of making subscription, on or before July 10, 1907, in which case the amount payable will be $901 per $1,000 bond, including accrued interest, or $450.50 per $500 bond, including accrued interest.

The warrants must be returned to this office by the stockholders, or by the persons to whom assigned, on or before July 10, 1907, accompanied by the payment of the first instalment; and all warrants not so returned with such payment on or before said date shall be void and of no value.

Failure to pay the second or third instalments when and as payable will operate as a forfeiture of all rights in respect of the subscription and the instalments previously paid.

The Treasurer will, on surrender of the warrants and payment of the first instalment, issue receipts which will be transferable by delivery and which must be returned on or before **August 9, 1907,** accompanied by the payment of the second instalment, for endorsement thereon of the payment of said second instalment, and again on or before **September 10, 1907,** accompanied by the payment of the third instalment.

Fractions desired by stockholders, to complete full bonds or fractions which stockholders desire to dispose of, must be bought or sold in the market as the Company cannot buy or sell fractions.

Full-paid receipts for bonds will be exchangeable for the engraved bonds as soon as issued.

No subscription or assignment of this privilege will be recognized unless made on the forms of the Company.

No holder of stock of the Company shall be entitled to any of the above-mentioned bonds unless the terms of subscription herein specified are fully complied with.

The subscription and respective instalment payments must be made at the dates and in accordance with the provisions stated above. Checks or drafts in payment of subscriptions must be drawn in favor of Union Pacific Railroad Company, in New York funds, and for the exact amounts covering the respective instalments.

By order of the Board of Directors,

FREDERIC V. S. CROSBY, Treasurer.

DIVIDENDS.

NEW YORK OFFICE OF

The American Cotton Oil Company,

27 Beaver Street, New York City.

The Board of Directors of The American Cotton Oil Company on May 7, 1907, declared a semi-annual Dividend of Three Per Cent. upon the Preferred Stock of the Company, payable June 1, 1907, at the Banking House of Winslow, Lanier & Company, 59 Cedar Street, New York City.

The Preferred Stock Transfer Books of the Company will be closed on May 16, 1907, at 3 P. M., and will remain closed until June 3, 1907, at 10 A. M.

JUSTUS E. RALPH,
Secretary.

DIVIDENDS.

UNION PACIFIC RAILROAD CO.

A Quarterly Dividend of $2.50 per share on the Common Stock

of this company has been declared, payable at the Treasurer's Office, 120 Broadway, New York, N. Y., on July 1, 1907, to stockholders of record at 3 P. M. on Wednesday, May 29, 1907.

The stock transfer books will be closed at 3 P. M. on May 29, 1907, and will be reopened at 10 A. M. on Jun 17, 1907.

Stockholders who have not already done so are requested to promptly file mailing orders for dividends with the undersigned from whom blank orders can be had on application.

FREDERIC V. S. CROSBY, Treasurer.

ENTERED AT THE POST OFFICE AT NEW YORK, N. Y., AS SECOND-CLASS MATTER.

SATURDAY, MAY 25, 1907.

After having displayed persistent strength for more than a fortnight, the foreign exchange market of New York during the latter part of the present week eased to a certain extent, the decline in rates being, in fact, regarded in banking circles as sufficient to negative for the time being any expectation of shipments of gold from this country to France. That there was considerable danger of such a movement has been generally admitted. In fact, the absence of any gold exports was to some extent attributed to the unwillingness of international bankers to engage in such operations at this time, on the ground that they would tend to destroy the equilibrium of the money markets, their attitude in this respect being similar to that which they adopted during the autumn and winter, when, although the exchange situation and the money market at New York would have justified them in withdrawing gold from London, they refrained from doing so, apparently, for fear the stringency at the last named center would be aggravated to an extent which would exercise a bad influence all around. It is furthermore to be noted that the Bank of France is generally understood to have made known its willingness, early in the present week, to allow interest upon gold consignments while in transit from New York to Paris, thus offering an inducement to take gold here which could hardly be resisted. A further deterring influence, however, seems to have been furnished by the general belief that if gold went out from New York the Secretary of the Treasury would promptly reduce the government deposits in national banks.

Developments have taken place this week in the legal controversy over the so-called 80-cent gas law passed by the New York legislature last year. It may be remembered that shortly after the passage of the law the Consolidated Gas Company instituted a suit in the United States Circuit Court to test its validity, and a special master was appointed to take testimony regarding the value of the company's property as bearing upon the reasonableness of the rate fixed by the legislature. On Monday the special master, Mr. Masten, made his report, in which he sustained substantially the contentions of the company, both as to the value of its property and franchises and the cost of gas in the burners. This report will come up for confirmation next week. Yesterday the attorney-general of the state applied to a justice of the New York Supreme Court for leave to begin an action to procure a judgment annulling the charter of the gas company on the ground that the franchises of the companies that were merged to form it have expired, and also upon the ground that the company was organized for the purpose of creating and now constitutes a monopoly and an unlawful restraint of trade and competition. A hearing upon this application will also be had next week.

Minister Dawson's arrival at Washington has set at rest the report that the treaty with Santo Domingo was amended by the Congress of that republic. It was, in fact, disposed of as already indicated in these columns; that is, it was adopted in the form in which it was ratified by the Senate, and certain explanatory paragraphs were added. The new minister of the United States to Santo Domingo was received very cordially by both the President and the people when he presented his credentials to the former on Saturday, a circumstance which would seem to reflect a feeling of satisfaction at the results of the American handling of the republic's affairs. That the administration of the revenues of Santo Domingo by United States officials has been most advantageous for the republic and its creditors is made sufficiently clear by some figures given out by the insular bureau of the War Department, and covering the period from April 1, 1905, to March 31, 1907. These figures show that the general fund available for distribution among the various creditors of the republic, and now on deposit in New York, amounted on the latter date to $2,636,048.63, representing 55 per cent. of the revenues. There has been paid to Santo Domingo $2,312,962, an amount which, though representing less than one-half of the receipts, is yet greater than the total revenue properly accounted for under the native administration for any two years before.

The strike of the longshoremen in the harbor of New York still continues and the prospects for a speedy settlement are by no means bright, the two contending forces, employers and employees, being apparently as firm in their attitudes as at any time since the inception of the strike. In the meantime ships are leaving with inward bound cargoes only partly unloaded, and considerable tonnage destined for over-sea ports is held on the docks, while large quantities are being diverted to other nearby domestic ports. That the strike is responsible for practically all of the decline in the volume of exports proceeding from the port of New York is beyond cavil. The weekly figures of exports measure the damage in this respect better than any words can. Thus in the week ending April 13 the value of foreign shipments consigned from New York was $14,897,719; for the subsequent week the figures were $12,957,725, while for the week ending April 27 they were $14,859,398, and in the week prior to the strike the total was $13,400,963. In short, shipments for the five weeks preceding the trouble on the docks averaged $13,494,000, but the first full week of the strike wrought quite a transformation, the total of exports for the week ending May 18 amounting to only $6,456,067, a drop of nearly 52 per cent. in one week.

It is thought that the bill pending in the Massachusetts legislature, which authorizes savings banks of the state to establish industrial life-insurance departments, will become a law. In that event the progress of the new idea will be watched with interest. The scheme is not designed to make money in the generally accepted sense; in fact, the plan is to furnish insurance at a low cost, relatively and actually when compared with the rates quoted by the standard life-insurance companies. The central idea of the new scheme is conceived in the belief that wage earners and others of comparatively small means will seek insurance, thus rendering solicitors unnecessary. Whether the proposed scheme will prove successful, only time and a trial of the experiment will tell. Long experience in the insurance world has proved that while a relatively small number are voluntarily applicants for insurance, the vast majority become policy-holders only after the most persistent canvassing. Of course the new idea may be so meritorious that the people of Massachusetts will see things in a different light, but it is difficult for one to fall in with the belief that a new order of self-sacrifice and economy will come to the fore without the interested efforts of agents, who expect to profit from the increasing of the number of those sharing in the benefits of the system.

The status of the New York Cotton Exchange was involved in a suit instituted by Mr. Theodore H. Price against that organization a short time ago, in which a referee appointed by the New York Supreme Court filed a report this week. The plaintiff's complaint was based mainly upon alleged improper classifications of cotton made by the committee of the Exchange having those matters in charge. The counsel for the Exchange moved for the dismissal of the complaint and the denial of an application for an injunction on the ground, among others, that there was no duty owing by the Exchange to the plaintiff, who was not a member thereof, and that the plaintiff had shown no irreparable damage to himself, if any, because of the alleged acts of the Exchange officials. The referee declared in favor of the position taken by counsel for the Exchange, holding that that body was not a public nor even a quasi-public corporation in the sense contended for by the plaintiff, for the reason that it held no franchise which clothed it with the power of eminent domain, but was only an association of merchants dealing in the products of the country, who solely for their own convenience provided a room where they met to transact business.

A conference which was in session at Washington recently, dealing with matters connected with weights and measures, brought its meeting to a close on Monday. The conference, which comprised representatives from a number of states, made several recommendations that may find expression in legislation later on. It was suggested, for example, that each state should have a commissioner in charge of weights and measures; that suitable quarters and equipment should be provided at the expense of the state; that the commissioner should make an annual report to the governor covering the extent of his services, and showing the number of weights, measures and balances tested, sealed or condemned, and that all weighing or measuring devices used in trade should be approved by the national bureau of standards, subject to local inspection for defective operation. It was also urged that the bureau of standards should prepare a set of model regulations for the guidance of local inspectors. Thus far the states have dealt with matters connected with weights and measures in the absence of action by Congress. It would not, however, occasion any surprise if the national legislature should in the near future take some action upon the general subject. Its competence to do so cannot be questioned, in view of the fact that it is given power in the Constitution to fix the standards of weights and measures.

THE REPORT ON THE STANDARD OIL COMPANY.

A report of no little interest has just been submitted to the President by Mr. Herbert Knox Smith, the Commissioner of Corporations, in which the latter presents some of the results of his investigation into the operations of the Standard Oil Company. The report is accompanied by a letter in which the point is brought out that certain information gathered by the bureau is not divulged for the present, owing to the apprehension that the publication of it might interfere with the government's proceedings against the company at St. Louis. Much of the material presented deals with the extent of the company's business, a matter which in a general way has been often brought to public attention before, though perhaps not expressed with the same statistical precision as in the documents now given out. Much space in the report is devoted to criticisms of the methods of the company in extending its operations in the period since its formation.

As a period to which to refer the general study of conditions, the year 1904 has been selected. In that year the Standard Oil Company and its affiliated concerns refined over 84 per cent. of the crude oil run through refineries; produced more than 86 per cent. of the country's total output of illuminating oil; maintained a similar proportion of the export trade of illuminating oil; transported through pipe lines nearly nine-tenths of the crude oil of the older fields and 98 per cent. of the crude oil of the mid-continent or Kansas territory field; secured over 88 per cent. of the sales of illuminating oil to retail dealers throughout the country and obtained in large sections as high as 99 per cent. of such sales. It also controlled practically similar proportions of the production and marketing of gasoline and lubricating oil. The Standard had as its only competitors in the refining business about seventy-five small refineries, whose total consumption of crude oil was less than a fifth of that of the Standard. A number of these companies are dependent for their supply of crude oil upon the Standard's pipe lines In the eastern and mid-continent fields it has but one competitor of any significance, namely, the Pure Oil company, whose pipe-line business is not more than one-twentieth of that of the Standard. The outstanding stock of the controlling New Jersey company is about $98,000,000. It controls at least ten refining companies, four lubricating-oil companies, three crude-oil producing companies, thirteen pipe-line and other transportation companies, six marketing companies and fifteen foreign companies, besides having close affiliations with a considerable number of other concerns.

The present report is largely devoted to a consideration of the relation borne by its control of pipe-line transportation to the ascendency of the Standard. Mr. Smith says that that ascendency has never rested on ownership of the sources of supply of crude oil. According to his statement, not over one-sixth of the total production of crude oil in the country in 1905 came from wells owned by the Standard interests. Its growth and present power rest primarily on its control of transportation facilities in one form or another. In a preceding report attention was given to certain railway discriminations, which greatly aided this great organization, and which in the course of the last year have been generally abandoned. One of the greatest sources of the company's present power is declared to be derived from its control of pipe-line transportation. This naturally gives it great advantages in the marketing of its own product. It is, however, alleged in the report that the Standard's charges for the transportation of the products of others are unreasonable, and some statistics of the cost of transportation are adduced to support this view.

It is upon this feature of the report that its special interest hinges. It will be recalled that the rate law approved by the President on June 29 of last year brought within the jurisdiction of the Interstate Commerce Commission corporations owning pipe lines engaged in the transportation of oil or any other commodity except water and natural gas. It is charged by Commissioner Smith that the Standard pipe lines have thus far substantially failed to comply with the requirements of that act affecting common carriers by failing to file tariffs as directed by the act, and by refusing to transport oil for others, or by not naming in tariffs filed by them rates to many important and desirable destinations, or by requiring unreasonably large amounts of oil to be shipped at a single time. The rates filed are declared to be enormously higher than the cost of transportation. It is understood that this feature of the report will form the subject of inquiry by the Interstate Commerce Commission in the near future. Indeed, one phase of the matter has already been brought to its attention in an application made by an organization of independent operators for an order requiring the reduction of rates for the shipment of oil through pipes.

FURTHER STOCK-MARKET DECLINES.

Although the stock market at New York had been depressed in tone ever since the crop situation in the wheat-producing states assumed an unfavorable aspect, it displayed fair steadiness, despite the total disappearance of speculative interest, until the present week. Beginning with last Monday's market, there was a decided change. Inactivity gave place to a fairly large volume of dealings at the Stock Exchange, attended by ample evidence of liquidation on an extensive scale and renewed pressure on prices by bearish professional operators, with attending declines which brought prices close down to the low quotations of last March, and in some cases to below the figures which were recorded in that semi-panicky situation. It is true that the movement was finally stayed, the liquidation having exhausted itself by the middle of the week, whereupon the customary covering by the shorts set in and created a recovery in the price list. Nevertheless, the demonstration has undoubtedly tended to create additional discouragement on the part of the stock-market public, while instead of attracting bargain-hunting purchases by outside holders of capital, there was little activity of that kind, compared with what is usually developed under such circumstances.

Wall street has apparently been somewhat at a loss to explain the matter, as there was no particular reason connected with the money market calculated to bring on liquidation in stocks. In fact, the money situation improved this to the extent that the threatened withdrawals of gold from New York to Paris were averted by a timely decline in exchange rates. Nor was any serious disaster apprehended, the one failure of a New York brokerage house, which actually occurred, being insignificant. In default of anything of this kind, the market paid some heed to explanations which in instances were almost fantastic. In reality, however, the course of the market in this instance was normal and easily understandable. It had a very good rally from the break which occurred in March. The improvement in prices did not, however, bring in any outside public support, either at home or abroad. The agitation against corporations continued with such striking results of what it could accomplish in the field of legislation, as the Public Utilities bill just adopted at Albany. Add to this the uncertainty about the crop outcome and its possible effect on the prosperity of railroad and industrial corporations, and a situation was created in which the waiting attitude of the share market would be replaced by actual selling, representative of the desire of some large holders of stocks to drop their burdens.

It is accordingly interesting to compare the range of prices for the present week with those which were touched during the course of the March slump, and also with the high prices of the year, which, without exception, were attained, so far as the leading stocks are concerned, at its very beginning, and also with the higher range of values reached when the market rallied during the latter part of March and to some extent during April. These figures are accordingly displayed in the following tabular form:

	High, 1906	Low, Mar. 14 or 15	Recovery, April and May	Low, present week	Close, May 24
Atchison	110½	82⅝	98	86¼	88⅝
Baltimore & Ohio	125⅝	95	102½	94½	95

U. S. Steel pfd	113¼	95½	102⅛	97⅜	98½

* Ex rights. † Ex dividend.

Of the above twenty-seven active trading stocks, no less than nine have sold during the present downward movement at lower figures than they did on March 14 or 15, when the market was fairly panicky. It may also be noted that in one case, to wit, New York Central, the figures of the present movement brought it to the lowest price at which the stock has sold for several years. Furthermore, in a number of instances the low prices just seen were only slightly above those of last March.

RAILWAY GROSS AND NET EARNINGS FOR MARCH.

It is a well-known fact that the railways of the country are favored with a very large volume of business and that their gross earnings are exceptionally good, relatively and actually, the increases in this item over last year's figures being quite marked, but the investor, while interested in gross receipts, is especially anxious about the trend of net revenue. This anxiety is, of course, very natural, seeing that these are days when labor is more fully compensated, and that materials, and in fact everything that enters into the operation of a railway, are higher in price. These higher costs are reflected very clearly in the recent trend of net earnings, developments in this respect since last November being either toward small ratios of increase or actual decreases, as for instance in January and February, when the losses from the corresponding months in 1906 amounted to 2.4 per cent. and 5.9 per cent. respectively; but weather conditions in the two periods mentioned were especially adverse as regards economical operation of the railroads. By March, however, a slight change for the better came about, the volume of gross receipts expanding 10.2 per cent. over those reported for the like month in 1906, while net revenue decreased but a fraction of 1 per cent. as compared with the corresponding figures for March, 1906. Operating expenses were considerably augmented, however, for the increase over last year amounts to 15 per cent., a figure that is much above the ratio for February. The volume of increase in gross earnings for March was quite heavy, being $12,613,885 on a total of $136,122,236, whereas the loss in net receipts amounted to only $85,505. There is little use in delving into the subject any further, for the entire trend of earnings may be summarized by saying that the primary factors in the income-producing situation are large business but high operating costs. This table gives the results on gross and net receipts for March, that being the latest month for which conclusive returns are available:

	1907	1906	Inc.
Gross earnings	$136,122,236	$123,488,351	10.2
Operating expenses	96,706,624	83,787,134	15 4
Net earnings	39,415,612	39,501,117	*0.2

*Decrease.

Now this exhibit shows what proportions the various sections of the country have contributed to the grand total of gross receipts:

	1907	1906	Inc.
Northwestern	$8,543,122	$7,211,304	18.4
Central-western	11,277,083	10,862,574	3.7
Trunk lines	30,469,523	29,133,518	4.5
Eastern	2,821,023	2,637,174	6.9
Coal roads	10,572,735	10,343,372	2.2
Southern	25,445,130	23,455,719	8.6
Southwestern	23,924,998	20,230,472	18.2
Pacific	23,068,622	19,634,218	17.4
Total	136,122,236	123,508,351	10.2

Thus it will be seen that the heaviest ratios of gain are reported by the southwestern, the northwestern and Pacific roads, their gains being 18.2 per cent., 18.4 per cent. and 17.4 per cent. respectively. The other gains are of moderate proportions, the largest being that returned by the southern roads—8.6 per cent. Net earnings for March are shown by sections in the following:

	1907	1906	Inc.
Northwestern	$2,387,303	$2,063,682	15.7
Central-western	3,418,715	3,154,355	8.3
Trunk lines	7,476,849	8,520,700	*12.2
Eastern	592,563	792,866	*25.2
Coal roads	3,647,262	4,032,883	*9.5
Southern	6,474,163	7,346,534	*10.5
Southwestern	8,115,786	6,282,903	29.1
Pacific	7,302,971	7,307,254	*0.6
Total	39,415,612	39,501,117	*0.2

* Decrease.

Only three divisions return increases, the southwestern, northwestern and central-western—29.1 per cent., 15.7 per cent. and 8.3 per cent. respectively. The remaining five groups report losses ranging from 25.2 per cent. in the case of the eastern roads down to three-fifths of 1 per cent. in that of the Pacific lines.

The swings in gross and net earnings for fifteen months back are shown in the following table:

	Per cent. inc. Gross	Net
	1907	1907
January	8.2	*2.4
February	7 7	*5.9
March	10.2	*0 2
	1906	1906
January	20.3	44.0
February	26.8	70.9
March	12.0	14.0
April	5.2	4.3
May	9.3	11.8
June	11.0	13.0
July	13.1	17.1
August	12.5	11.9
September	8.0	5.0
October	11.3	9.7
November	7.2	3.2
December	8.9	2.0

* Decrease.

The principal changes in net earnings for the month of March, compared with the corresponding month last year, are as follows:

INCREASES.	
Atchison	$580,327
Canadian Pacific	401,072
Rock Island	396,874
Missouri Pacific	347,098
St. Louis & San Francisco	280,610
Illinois Central	242,986
Pennsylvania, west of Pittsburgh and Erie	204,800
Denver & Rio Grande	192,960
Mexican Central	174,631
Union Pacific	150,616
Pittsburgh, Cincinnati, Chicago & St. Louis	145,013
Wabash	130,582
Kansas City Southern	114,822
DECREASES.	
Baltimore & Ohio	$869,438
Southern Pacific	608,909
Southern Railway	498,338
Pennsylvania, east of Pittsburgh and Erie	464,400
Chesapeake & Ohio	129,162
Central Railroad of New Jersey	124,968
Hocking Valley	116,189

Preliminary reports for April indicate that operating conditions have improved, and therefore one may look for betterment in net revenue.

THE DEARTH OF LABOR.

All reports, public and private, seem to point to employment at good living wages being offered more generally than ever before in this country's history. It is true that this is a condition not confined to this country. Canadian advices are that something very similar exists north of our border, and nearly every European country notes scarcity of skilled labor in many lines. For instance, the only limit to setting up of new cotton-mill machinery in Lancashire is reported by BRADSTREET'S Manchester correspondent to be the scarcity of labor both to install and to afterward operate producing spindles and looms. In Germany the superior attractions of city life in manufacturing centers are said to have drained the rural districts of that empire of its supplies of agricultural hands. In Italy the government is reported to be concerned at the immense emigration which is stripping that country of its rural labor. It might be thought that with the immense immigration into this country the problem of obtaining a full labor supply would be an easy one, but it is said that a large part of the present immigration that comes from central Europe especially tends to gather in the coast cities, and whatever complaints come of inadequate employment in these cities is due simply to congestion of supply in the larger cities, to the detriment of the market in the smaller centers and in the rural districts. The complaint of scarcity of labor at the south is one of several years' standing, consequent upon the gathering to new industrial centers of the rural population, but it is noted that notwithstanding higher wages offered and paid, mill labor is scarce now in both southern and New England cotton mills.

The help-wanted columns of the papers of a large city like New York testify to the pressure of demand for labor. One popular medium for this class of labor carries daily three times as many advertisements of help wanted as it does of situations wanted, and there have been instances of advertisements of boys wanted to run errands not eliciting one response. Another instance of this kind was afforded this week in the hanging up of a sign by a large New York business house of a "boy wanted," for four days not bringing one satisfactory applicant. There may, perhaps, be something said as to the improper distribution of the supply of such labor, and there is also something probable in the theory that increased facilities of education and regulations as to the employment of children under school age limit the floating supply, but these hardly cover all the ground. There is, in fact, a dearth of labor, despite the large immigration and the immense yearly increase of population; and to return to the matter of employment of boys, there is no doubt that a boy wanting a position expects to start at double the wages paid when men now of middle age were boys. No doubt these conditions may be modified if trade and industry quiet down, but so far as can now be seen, the labor market has shown few signs of the industrial reaction predicted for some time past.

THE IRISH ADMINISTRATIVE COUNCIL BILL.

Another effort to satisfy the demand for Irish autonomy has to all appearance come to grief in its inception. The unanimous rejection by a representative Irish convention of the bill introduced by Chief Secretary Birrell, not quite three weeks ago, seems definitely to dispose of the fate of that measure almost in the hour of its birth. The plan proposed by Mr. Birrell, it may be said, was not, in the sense in which the words have been generally understood in Ireland, one of "home rule." Under it a system of local administration was proposed as contrasted with one for local legislation. The bill provided for the establishment of an administrative council consisting of one hundred and six members, of whom eighty-two were to be elected for a term of three years on the basis of the local government board franchise, and twenty-four were to be appointed for the first year by the King and thereafter by the Lord Lieutenant of Ireland. The Under Secretary for the latter official was to be an ex officio member of the council.

The powers of that body seemed to be limited to the control of eight departments, namely, the Local Government Board, the Department of Agriculture, the Congested Districts Board, the Commissioners of Public Works, National Education and Intermediate Education, the Inspectors of the Reformatory and Industrial Schools and the Registrar-General's Office. It was also proposed to establish a new department to have the oversight of primary and secondary education, which department also was to be placed under the control of the council. That body was to have the power to appoint and remove the officials of the departments mentioned, though with a proviso reserving the rights of existing officers. For the financial purposes of the departments under the control of the council it was proposed to set aside a certain annual sum to be fixed by Parliament every five years and charged to the consolidated fund, but to be paid into a separate Irish fund. In all, this fund was estimated at about $20,000,000 a year, of which a certain proportion was required to be spent for public works and the general development of the country. In the distribution of powers, the Supreme Court of Judicature, the Royal Irish Constabulary, the Dublin Metropolitan Police, the Land Commission and the Prisons Board were left under the control of the imperial authorities, and the Lord Lieutenant was given the power to reserve his consent to any resolution of the council or of any of the departments subject to it—in other words, he had the right of veto.

When the measure was introduced, the leader of the opposition, Mr. Balfour, declared that the proposals contained in it would not satisfy the English nor the Scotch, and still less the Irish. This forecast has been borne out in a striking way within the week as far as the people immediately affected are concerned. On Tuesday a convention of 2,000 delegates which met in Dublin to consider the provisions of the bill declared unanimously against it, on the ground that it was utterly inadequate in scope and unsatisfactory in details. The convention further called upon the Irish members to oppose the bill in the House of Commons and to urge the government to introduce a measure for the establishment of a native parliament, with a responsible executive having power over all purely Irish affairs. It seems to be recognized on all sides that this action of the Irish convention has not only disposed of the specific measure under discussion, but has dealt a severe blow to the prestige of the present Liberal administration, which will scarcely venture to take any other step in the direction of satisfying the Irish demand for home rule during the life of the existing Parliament.

THE INFLOW OF PRECIOUS METALS.

If the movement of precious metals is to be taken as a guide to the real balance of trade, the current this year has set strongly in favor of this country. In fact, the present fiscal year, ending in June, promises to show a larger movement of gold into this country than ever before. This is all the more notable in view of the fact that there have been other years when the excess of exports over imports has been greater than in the present one, and that the present year has shown a greater relative gain in imports than in exports. In the silver movement, too, there seems to be a smaller relative movement of exports than in recent years, and the imports are likely to be record ones, this being perhaps explainable by the increasing imports from Mexico of ores to be refined in this country. The tables following show the imports, exports, and excess of imports or exports of gold and silver, respectively, from 1896 to 1906, and for the ten months of the fiscal year 1907 for which figures are available:

	GOLD. Imports	Exports	Excess of imports
Fiscal year—			
1896	$33,525,065	$112,400,947	*$78,834,882
1897	85,014,780	40,361,580	44,653,200
1898	120,391,674	15,406,391	104,985,283
1899	88,954,603	37,522,086	51,432,517
1900	44,573,184	48,266,759	*3,693,575
1901	66,051,187	53,185,177	12,866,010
1902	52,021,254	48,568,950	3,452,304
1903	44,982,027	47,090,595	*2,108,568
1904	99,055,368	81,459,986	17,595,382
1905	53,648,961	92,594,024	*38,045,063
1906	96,221,730	38,573,591	57,648,139
1907 (ten months)	109,616,707	23,003,407	86,613,300

* Excess of exports.

	SILVER. Imports	Exports	Excess of exports
Fiscal year—			
1896	$28,777,186	$60,541,670	$31,764,484
1897	30,533,227	61,946,638	31,413,411
1898	30,927,781	55,105,239	24,177,458
1899	30,675,056	56,319,055	25,643,999
1900	35,256,302	56,712,275	21,455,973
1901	36,389,521	64,285,180	27,898,659
1902	28,232,254	49,732,390	21,410,136
1903	24,163,491	44,250,259	20,086,768
1904	27,768,814	49,472,702	21,703,888
1905	27,484,865	48,848,812	21,363,947
1906	44,442,540	65,869,063	21,426,523
1907 (ten months)	35,858,023	47,052,258	11,194,235

The ten months' exports of gold, it will be seen, are smaller, with one exception, than in any year since 1895, and imports are larger than in any year since 1896, except 1898. The excess of imports for the present year is second only to the excess shown in the latter year. It is possible that with a lively gold-export movement in the next month, possible in view of present international money conditions, the excess of the present year in imports may be reduced, but the fiscal year 1907 seems likely still to be a notable one in the import movement of the precious metals.

STATISTICS OF THE GREAT REPUBLIC.

The "Statistical Abstract of the United States," which recently made its annual appearance, is a veritable mine of information. The volume contains over 700 pages of statistics, and while one would hardly care to handle it for the sake of diversion, it is nevertheless well calculated to develop a knowledge of material facts. The work will prove a valuable addition to the working library of the busy man of affairs, the scholar, the student, or, for that matter, any one inclined to statistical research. It readily furnishes the exact facts as to the population of the country at various periods, the share that has been contributed by immigration, the sources of government income, the amount of its indebtedness, the volume of money in circulation, and indeed practically everything that enters into the economic affairs of the nation. Figuratively speaking, the book furnishes many interesting statistical sermons regarding the progress of the country during the last century or so. Thus area has grown from less than 1 million square miles in 1800 to 3 millions at the present time, and more than 3½ millions if Alaska be included, or about 3,775,000 if the islands are included. At the same time the population has increased from 5 millions to 85 millions, and if all of the area under the American flag be included, to nearly 100 millions. The population per square mile in continental United States has grown from 6.5 persons in 1800 to about 8 in 1850, 25 in 1900, and nearly 28 at the present time. In 1850 the wealth of the country was placed at 7 billion dollars, whereas by 1904, the latest year for which figures are available, the figures had increased to 107 billion dollars. The per capita wealth, which in 1850 amounted to $307, was in 1904 $1,310.

In 1864, the civil war period, the public debt was 2,675 million dollars, but it now amounts to only 964 million dollars; and the per capita indebtedness, which in 1864 was $76.98, is now only $11.46.

The money in circulation, which in 1880 was 26 million dollars, in 1850 278 millions, and in 1880 973 millions, was in 1906 2,736 millions; and the per capita circulation, which in 1880 was $5, and in 1850 $12, was in 1906 $32.32.

Bank deposits, for which no record is available earlier than in 1875, were in that year a trifle over 2 billion dollars, in 1900 7¼ billions, and in 1906 12¼ billions. Deposits in savings banks show a complete record from 1820 to date. In 1820 they amounted to 1 million dollars, speaking in round terms; in 1850 they had reached 43 millions, in 1875 924 millions, in 1900 2⅓ billions, and in 1906 3¼ billions; while the number of depositors, which in 1820 was only 8,635, in 1850 251,354, in 1875 2,359,864, and in 1900 6,107,083, was in 1906 8,027,192, or nearly a thousand times as many as in 1820, while the deposits were more than 3,000 times as much in 1906 as in 1820.

Imports of merchandise, which in 1800 amounted to 91 million dollars, were in 1906 1,226 millions; while exports, which in 1800 were 71 millions, were in 1906 1,744 millions. The per capita of importations, which in 1800 amounted to $17.19, was in 1906 but $14.42; while the per capita of exportations, which in 1800 was $13,37, was in 1906 $20.41.

In the matter of production and manufacture the picture of progress is equally interesting. Cotton production, which in 1800 amounted to 155,556 bales, had by 1850 reached 2⅓ millions; in 1875, 3¾ millions; in 1900, a little less than 10 millions, and in 1906, 11⅓ millions.

In 1866 the production of wheat was 151,999,906 bushels, by 1886 it had grown to 457,218,000 bushels, and in 1906 the yield was 735 million bushels. Corn production, which in 1840 was 377 million bushels, touched the billion-bushel line in 1870, the 2-billion-bushel mark in 1889, and in 1906 was 2,927,416,091 bushels. The sugar production of the United States, which amounted to less than 14,000 tons in 1825, 111,000 tons in 1850, and 270,000 tons in 1900, was in 1906 582,414 tons; beet-sugar production, which began in the "seventies," having grown from 446 tons in 1877 to 2,800 tons in 1890, 82,736 tons in 1900, and 300,317 tons in 1906. Meantime consumption grew even more rapidly, the total number of tons of sugar consumed having been 40,612 in 1822 and 2,864,013 in 1906, and the quantity consumed per capita having increased from a little less than 9 pounds in 1822 to a little more than 76 pounds in 1906.

In 1870 the expenditures for education amounted to $63,396,666, ten years later they were $76,192,375, and by 1905 the total was $291,616,660.

In the great manufacturing industries evidences of progress are equally apparent. The page devoted to this subject shows that the number of people employed in manufacturing has grown from less than 1 million in 1850 to 5½ millions in 1905; the wages paid, from 237 million dollars in 1850 to 2,611 millions in 1905; and the value of products, from 1 billion dollars in 1850 to nearly 15 billions in 1905.

THE GREEN BUG IN KANSAS.

To the Editor of BRADSTREET'S:

SIR—I am thinking that we here have been greatly underestimating the damage done to the Kansas wheat crop. This year, while drought and late frosts have done some damage, the chief harm has come from the green bug. The efforts to import parasites to prey upon the bugs have been hampered both by lack of funds and by the opposition of those who have not believed in the efficacy of the parasite. Hence the bugs are merrily at work, and thousands of acres have been ruined. The western third of the state and the northern half are not affected. A section bounded by the state lines and a line drawn through the western border of Barber county, intersecting one drawn through the northern border of Reno county, is affected. In this section wheat in the eastern portion is a total loss. The western half will show about 50 per cent. loss, greater even in the banner county of Sumner; but the western half will ordinarily raise five or more times that raised by the eastern half of this section. As the bugs are still working, the loss may be much larger. Oats are apparently doomed, and some say the bugs are now damaging the corn. Corn is certainly threatened, but what damage the bugs will do to it remains to be seen. The scientists are doing good work with their parasites and have a fair chance of checking the plague before corn can be much hurt; but I fear the area mentioned can be disregarded in making up the wheat crop reports for 1907.

Last year, you will recall, the wheat was heavily damaged by the incessant rains. There is still considerable old wheat in farmers' hands, but the grade is poor, and millers of this section have all along had difficulty in securing enough No. 2 to supply their own needs. This has resulted in a greater resort to mixing than usual, the effect upon the manufactured product being, of course, not very beneficial.

Wichita, May 18, 1907.

EDITORIAL NOTES.

Not a little interest continues to attach to the position of the Tennessee Coal & Iron Company and the ultimate disposition of that property. In fact, the approaching dissolution of the firm of Charles G. Gates & Co., of New York, and the announcement that Mr. John W. Gates, its leading member, intends to retire, temporarily at least, from further activity in Wall street, has stimulated a good deal of talk and rumor in regard to both Tennessee Coal and the Republic Iron & Steel Company, as the Gates interest was generally credited with being a prime mover in the formation of the pool which about two years ago acquired practical control of the enterprises in question. It will also be recalled that there was a general impression in stock-market circles that the capitalists who had gained control of the companies intended to bring about their consolidation, and that the Sloss Iron & Steel Company might also be included in such a deal, thus forming a gigantic combination of the principal iron and steel concerns operating in the south. The fact that such an arrangement was not effected has, furthermore, been ascribed to adverse money and stock market conditions, which would have rendered the successful working out of such a plan rather doubtful. The recent developments to which reference is made above accordingly gave occasion for a revival of the story that the holdings of the Gates party in Tennessee Coal have been turned over to bankers identified with the United States Steel Corporation, with a view to its absorption by the latter. Prompt denials of any deal have, however, been forthcoming, and it is stated on what might be deemed official authority that the United States Steel Corporation has determined to keep out of the southern territory altogether.

The final cotton ginning report for the season of 1906 shows that the crop grown in the latter year was 13,595,498 bales of 500 pounds, this including 322,064 bales of linters, and comparing with a total output of 10,804,556 bales in 1905 and 13,679,954 bales in the record year 1904. It will be seen that last year's yield was, therefore, only 85,000 bales less than the greatest yield ever gathered. Just for the sake of comparison, it might be noted that the actual yield of 13,273,434 bales, not including linters, contrasts with an estimated production, as figured out by the Agricultural Department last fall, of 12,546,000 bales. The production in different kinds of bales for five years past compares as follows:

	Bales in linters	*500-lb. bales*	*Run'g bales*
1906	13,305,263	13,595,498	13,439,374
1905	10,725,602	10,804,556	10,865,520
1904	13,697,310	13,679,654	13,845,385
1903	10,105,721	10,045,615	10,400,825
1902	10,784,473	10,827,168	11,275,105

The production of the different states in 1906 compares as follows:

	Rank	*Bales*		*Rank*	*Bales*
Texas	1	4,281,824	Indian Ter.	10	419,476
Georgia	2	1,626,330	Tennessee	11	317,641
Mississippi	3	1,569,530	Florida	12	57,135
Alabama	4	1,284,421	Missouri	13	56,472
Louisiana	5	1,012,573	Virginia	14	13,866
Arkansas	6	963,790	Kentucky	15	3,848
S. Carolina	7	895,130			
N. Carolina	8	594,387	Total		13,595,498
Oklahoma	9	498,899			

An interesting contribution was made this week to the discussion regarding what may be termed the steel-rail question, by the head of one of the largest concerns engaged in the manufacture of steel outside of the United States Steel Corporation. In an interview with Mr. C. M. Schwab, president of the Bethlehem Steel Corporation, that gentleman is quoted as stating that some years ago he came to the conclusion that a better rail would be an absolute necessity on account of the constantly increasing speed and weight of railway trains. In fact, he went so far as to express the opinion that the day is not far distant when the railroad companies will pay three times the present price of Bessemer steel for rails on which to carry their trains, and producing mills must be specially equipped to meet the demand. In his opinion the final solution of the problem will not be found in the use of rails manufactured by the open-hearth process, in spite of its superiority to Bessemer steel for railway purposes. While frankly admitting that results were not altogether satisfactory in connection with a test of nickel steel rails upon the Pennsylvania Railroad lines, he advances the idea that rails made in a way similar to armor plate, to which use nickel steel has heretofore been mainly applied, will surpass all others. At the same time it is stated in the interview that the head of the rails in general use is too heavy and the flange too light, while the imperfections, which cause the breakage of Bessemer rails, are there principally because the rail must be rolled while very hot, thereby increasing, as was pointed out in these columns a week ago, the liability to inherent defects, which cannot be detected until the rail is subjected to the practical test of the strain of wear and tear.

The "Manual of Statistics" for 1907 has just made its twenty-ninth annual appearance. A large proportion of those engaged in banking and commercial circles are well acquainted with the chief features of this useful work, but it is probable that these will be even more pleased with the current issue than they have been with any of the past volumes, for a number of valuable features have been added to this year's edition. As usual, the book contains in concise and yet full form information regarding railroad and industrial corporations of the United States and Canada, government securities and mining stocks. The edition for 1907 is made up of 1,064 pages. The volume is not unwieldy and will no doubt prove to be a handy and valuable desk companion for the journalist, banker or business man. The Manual differs in many respects from other works of its general character, in that while it gives detailed information regarding the historical aspects of railroad and industrial corporations, it also gives quotations and general statistical data on securities, cereals, and the like. The present edition devotes much attention to the newer mining securities.

Rumors of an impending issue of new securities by the Interborough-Metropolitan Company, the holding concern which controls the subway, the elevated lines and the Metropolitan Street Railway system of New York, have been current for some little time past. The intimations on this subject have, in fact, been responsible for the heaviness displayed in the securities of the parent company and its subsidiary organizations. The news which came out last Monday, however, to the effect that the Interborough-Metropolitan management had arranged to issue $15,000,000 of short-time 6 per cent. notes, was, however, received with even greater disfavor than has attended similar announcements by different railway and industrial companies during the last few months. The matter, in fact, was taken as positive proof that the company was in need of fresh capital, and doubts have been expressed as to whether the management could or would continue the payment of the 5 per cent. dividends upon the Interborough-Metropolitan preferred stock. Views of this kind seemingly find support in the report of that company for the year ending March 31, which made its appearance only a few days ago, showing, as it does, that after the payment of fixed charges and the aforesaid preferred dividend, there was a deficit of $1,347,489. On the other hand, it may be pointed out that, as compared with the results of all the properties in the system for the year ending March 31, 1906, the gross earnings of $43,353,000 display an increase of $2,660,000, while the net, which is given as $21,511,000, made a gain of $1,862,000, the above deficit for the year just ended comparing with one of $2,341,879, which is a gain of $984,000.

RECENT LEGAL DECISIONS.

[*Prepared for* BRADSTREET'S.]

Life Insurance—Assignment—Interest.

The Supreme Court of Georgia sustained, in the case of Rylander vs. Allen, the right of a person to procure insurance on his own life and to assign the policy to another who has no insurable interest in the life insured.

Homestead—Exemption—Note—Purchase.

In Kentucky a homestead exemption does not exist as against a note executed for money advanced to pay the purchase price for the land claimed as a homestead, according to the decision of the Court of Appeals of that state in the case of Hensley vs. Webb.

Bill of Lading—Delivery—Estoppel.

The Supreme Court of Washington held, in the case of Ray et al. vs. Northern Pacific Railroad Company, that a carrier might not be estopped, even as against a bona fide holder for value, to deny the validity of a bill of lading issued by its agent on the ground that the goods were never delivered to it for shipment.

Subscription—Contract—Performance.

The Supreme Court of Louisiana held, in the case of Milling et al. vs. Sulphur Timber & Lumber Company, that the fact that money subscribed for a particular purpose is used by the representatives of the subscribers for the purposes of a contract, by which such representatives alone, but not the subscribers, are bound, does not entitle the latter to the specific performance of such contract.

Sale—Timber—Contract—Title.

The Supreme Court of North Carolina held, in the case of Dennis Simmons Lumber Company vs. Corey, that an instrument reciting the receipt of a certain sum in part payment of all timber of a certain kind and dimensions on certain described land, which had been sold to the purchaser for a certain amount, to be paid within a certain time, together with a right to enter the land and build tramways to remove it within a certain term of years, passed title to the timber.

Railroad—Killing Animals—Negligence.

In the case of Chicago, Indianapolis & Louisville Railway Company vs. Ramsey, decided by the Supreme Court of Indiana, it appeared that appellee's steers broke out of his pasture and wandered upon the appellant's right of way where it was not fenced, and after following it to a small stream passed under a bridge, and leaving the right of way went into an inclosed field, from which they passed over private grounds to a place where the railroad right of way was properly fenced, and reëntered upon the right of way through an open gate at a farm crossing, where they were killed by a train. The court held that the railroad could not be held liable under the statute relating to killing animals that enter on the right of way where it is not fenced.

Mortgage—Assignment—Blank.

The Supreme Court of Minnesota held, in the case of Casserly vs. Morrow et al., that an action to set aside a mortgage foreclosure and sale of the premises and to redeem from the mortgage is a local action which must be brought in the county in which the land is situated; that a party claiming to be the assignee of a mortgage must have a recorded legal assignment thereof before he can foreclose it by advertisement, and that an instrument purporting to be an assignment of a mortgage in which no assignee is named, but a blank space is left for his name, is until the blank is legally filled a nullity, but that if the name of the assignee is afterwards inserted in the instrument by the authority of the mortgagee, either expressor implied from circumstances, and then recorded, it is a valid assignment, and the assignee may foreclose the mortgage by assignment.

Corporation—Dividends—Capital.

The New Jersey Court of Errors and Appeals held, in the case of Siegman vs. Electric Vehicle Company et al., that the prohibition of section 30 of the General Corporation act of that state, that "no corporation shall make dividends except from the surplus or net profits arising from the business, nor divide, withdraw or in any way pay to the stockholders or any of them any part of its capital stock, or reduce its capital stock, except according to this act," is to be read in connection with the provisions of sections 27 and 28, respecting a decrease of capital stock, and deals with the payment of a dividend out of capital, amounting in effect to a reduction of capital stock. The court said that while it is a function of the board of directors of a corporation to determine whether net earnings or surplus exist applicable to the payment of dividends, they cannot by an erroneous determination of this point confer either upon themselves or upon the corporation the power to make dividends out of capital; that the approval of a majority of the stockholders does not validate the declaration of dividends out of capital, and that neither the directors nor a majority of stockholders can waive the right of the company under section 30, above mentioned, to recover from the directors the amount of dividends paid out of capital.

Stock Yards—Rates—Regulation.

The Supreme Court of Kansas held, in the case of Ratcliff vs. Wichita Union Stock Yards Company, that the carrying on of stock yards at a commercial center with which all the railroads entering the city connect, and which is the only available market in the city, and for a large stretch of country around it, for the selling, feeding, resting and shipping of live stock, is a business affected with a public interest and subject to public regulation and control in respect to rates.

Accident—Damages—Personal Earnings.

In a case recently decided by the New York Court of Appeals, the question was involved whether the damages of a person, who was rendered unable to attend to his business by reason of an injury from the negligence of a street railway company, should be measured by the loss of his personal earnings or by the loss of his profits in business. It appeared that he conducted a lunch business in one room, with sittings for six or eight people, and employed two or three men to help him, and it was not shown that he possessed any particular skill in the business, which was principally selling oysters and clams, opened as ordered. The New York Court of Appeals held (Weir vs. Union Railway Company of New York) that the value of the plaintiff's personal services in connection with his business was the true measure of damages, and that it was error to permit him to prove the profits of his business.

Contract—Timber—Payment—Deposit.

In the case of Yanish et al. vs. J. Neils Lumber Company, recently decided by the Supreme Court of Minnesota, it appeared that the plaintiffs had deposited with the Treasury Department of the United States a sum of money as security for the performance of a contract given them for cutting certain standing pine timber upon government land. They assigned the contract to the defendant, in consideration of which he agreed to repay them the amount of such deposit whenever the government should permit the same to be applied in payment for timber cut under the contract. The proper department of the government adopted a rule that money so deposited might be applied annually, in proportion to the amount of timber cut, upon procuring the consent of the contractors' surety. The court held that the contract properly construed imposed upon the defendant the obligation of repayment to plaintiffs as soon as the deposit could by rule of the goverment be resorted to, in whole or in part, for the purpose stated, and that it was the defendant's duty to obtain the consent of the surety to such application.

Insurance—Declaration—Deceased.

The Supreme Court of Minnesota held, in the case of Taylor vs. Grand Lodge of the Ancient Order of United Workmen of Minnesota, that declarations and admissions of a person since deceased, made ante litam motam respecting the date of his birth, were admissible in evidence against his beneficiary in an action to recover upon a mutual benefit certificate issued to him in his lifetime, in which action the defense interposed was that a false date of birth was given in the application for membership, the basis for the insurance, and that in such an action a prior application for life insurance in another company made under circumstances of a nature to vouch for the truthfulness of the statements and representations therein contained, in which the date of birth was different from that given in the application involved in the action, was competent evidence as tending to establish the true date. The court further held that it would take judicial notice of the uniform and generally known custom of life-insurance companies to require as a condition precedent to the issuance of an insurance policy a properly signed and executed application therefor, together with an authenticated medical examination of the applicant.

BUSINESS NOTES.

Camphor Industry.

Secretary James Wilson, of the Department of Agriculture, in a recent address delivered before the Americus Club, of Pittsburgh, declared that the United States was successfully experimenting in the production of camphor. He said, in part: "For years the department has been distributing camphor-tree seed, and thousands of trees are now growing throughout the south and in the Pacific coast states. Two years ago a serious effort was made to develop the manufacture of camphor from these trees. By improvements in manufacturing processes satisfactory results have been accomplished, and a large manufacturing concern is now building up a camphor grove of 2,000 acres in Florida, from which it hopes to make its camphor. This firm uses more than $500,000 worth of camphor every year." A Japanese newspaper states that the Tokio government has on foot a project for the extensive planting of forests of camphor trees. The demand for camphor increases, having now reached over 10,500,000 pounds annually, and it will not be long until it reaches 13,000,000 pounds, says the Japanese authority.

Commerce of the "Soo" Canals.

This table, taken from the *Marine Review*, shows the freight tonnage of the "Soo" canals in the seasons set forth, three figures being omitted from the first three items:

	Total freight, net tons	*Valuation of freight*	*Freight charges*	*Av'ge haul, miles*	*Ft. chgs per mile-ton, mills*
1897.....	18,982	$218,235	$13,220	841.3	.83
1898.....	21,234	233,069	14,125	842.6	.79
1899.....	25,255	281,364	21,959	827.2	1.05
1900.....	25,643	267,041	24,953	825.9	1.18
1901.....	28,403	289,906	23,217	823.3	.99
1902.....	35,961	358,306	26,566	827.4	.89
1903.....	34,674	349,405	26,727	835.6	.92
1904.....	31,546	334,502	21,552	843.5	.81
1905.....	44,270	416,965	31,420	833.3	.85
1906.....	51,751	537,463	36,666	842.4	.84

The largest single item passing through the canals last season was wheat, the value of which was 24.80 per cent. of the total; iron ore furnished 22.69 per cent., copper 6.81 per cent., manufactured iron 5.58 per cent., coal 4 68 per cent. and lumber 3.69 per cent., the remainder, 31.75 per cent., being made up of a variety of miscellaneous products.

Leather Goods Manufactures.

The *Census Bulletin* on manufacture of boots, shoes and other leather goods covering the year 1905, says: "In 1905 there were 1,316 establishments engaged in the industry, having $122,526,093 capital, 149,924 wage earners, wages amounting to $69,059,680, cost of materials amounting to $197,363,495, and products valued at $320,107,458. All of these items, except the number of establishments, show increases for the five-year period since the twelfth census. Capital and value of products increased at practically the same rate, the per cent. of gain in the latter being 23.6, as compared with 22.7 in the former. The advance of 80.8 per cent. in the miscellaneous expenses, which is nearly four times that in any other item, is doubtless due in part to the heavy amount paid for advertising. The fact that the gain in wage earners, 5.7 per cent., was so slight in comparison with the gain in value of products, is due principally to the increased use of machinery, and in a measure to the large increase in the use of cut stock made by factories devoted exclusively to that kind of work. The number of establishments in 1905 was less by 283, or 17.7 per cent., than in 1900. Many concerns went out of existence in these five years, while others increased largely their equipment and their output."

Canadian Bounties.

Consul-General J. G. Foster writes from Ottawa that the Canadian government, with a view to the encouragement of the smelting of domestic iron ore by electricity and the manufacture of steel by electric process, has made special provision to the payment of bounties as follows: Pig iron manufactured from ore, on the proportion from Canadian ore produced during the calendar years 1907, $2.10 per ton; 1908, $2.10; 1909, $1.70, and 1910, 90 cents. Pig iron manufactured from ore, on the proportion from foreign ore produced during the calendar years 1907, $1.10 per ton; 1908, $1.10; 1909, 70 cents, and 1910, 40 cents. On puddled iron bars manufactured from pig iron made in Canada during the calendar years 1907, $1.65 per ton; 1908, $1.65; 1909, $1.05, and 1910, 60 cents. Rolled round wire rods not over three-eighths of an inch in diameter, manufactured in Canada from steel produced in Canada from ingredients of which not less than 50 per cent. of the weight thereof consists of pig iron made in Canada, when sold to wire manufacturers for use, or when used in making wire in their own factories in Canada, or such wire rods made after December 31, 1906, $6 per ton; steel manufactured from ingredients of which not less than 50 per cent. of weight thereof consists of pig iron made in Canada, on such ingots made during the calendar years 1907, $1.65 per ton; 1908, $1.65; 1909, $1.05, and 1910, 60 cents. No bounty shall be paid on iron or steel made in Canada by the electric process after December 31, 1908. On pig iron and steel manufactured in Canada for consumption therein, when such pig iron and steel is the product of Canadian iron ores smelted in Canada by electricity, viz, on pig iron manufactured from Canadian ore by the process of electricity smelting during the calendar years 1909, $2.10 per ton; 1910, $2.10; 1911, $1.70, and 1912, 90 cents. On steel manufactured by electric process direct from Canadian ore, and on steel ingots manufactured by electric process from pig iron smelted in Canada by electricity from Canadian ore, during the calendar years 1909, $1.65 per ton; 1910, $1.65; 1911, $1.05, and 1912, 60 cents.

Cuba's Tobacco Trade.

A comparison of Cuba's tobacco trade during the year 1906 by Consul Max J. Baehr, of Cienfuegos, reveals the fact that although 469,882 pounds less of leaf tobaccos were shipped to the United States in 1906 than in 1905, the difference in value of the two crops is but $29,893. Mr. Baehr reviews the tobacco trade as follows: "These figures show that although Cuba may have had a bad crop of tobacco, the increase in the price almost offsets the loss of production. In the United States especially there is a demand, apparently, for Cuban tobacco that must be supplied, let the cost be what it may, but other countries are rapidly increasing their tobacco production. The Netherlands, for instance, in 1905 exported to the United States 371,656 pounds, and last year increased it to 561,317. Canada almost trebled her tobacco trade with the United States in one year, and Asia in 1906 sent 118,737 pounds, as against 94,198 in 1905. Germany last year shipped to America 285,170 pounds, an increase of 81,322. The gain of other European countries, however, is enormous, having in one year jumped from 61,066 to 364,985 pounds. The Mexican tobacco industry is just beginning to grow beyond the confines of that country. Mexico exported in 1905 to the United States only 1,621 pounds, while last year she exported 42,779. While the exportation of leaf tobacco in 1906 fell considerably short of that of the preceding year, yet Cuba exported 253,404,493 cigars, which shows an increase of 22,763,692 over 1905."

The German Meerschaum Pipe Industry.

Consul Ifft, of Annaberg, reports that "the German meerschaum pipe manufacturing industry is facing a situation for which there seems to be no remedy. Inability to secure anything like an adequate supply of raw material is the cause. In the last three years prices of raw meerschaum have about doubled. Recently a small shipment has been received in Germany from Asia Minor—the first in some time. An advance of about 30 per cent. in price followed immediately. Practically all known deposits of meerschaum have been exhausted, it being now found only in the mines of Eski-Schehir, in Asia Minor, and the output there is very small. Agents of American and English manufacturers have secured control of this entire output, and German manufacturers can count on no more supplies from that source. In the last five months the price of raw meerschaum has advanced 50 per cent. The manufacturing town of Ruhla, in the Thuringian forest, will be the most affected. There from 3,000 to 4,000 workmen have for years past been employed in this industry. A Ruhla specialty is the meerschaum pipe, and with it goes hand in hand the manufacture of pipe stems, pipe lids and mountings, cigar holders and mouthpieces. The annual output averages about 27,000,000 pipe lids, 19,000,000 pipe cases, 15,000,000 pipe stems, 10,000,000 mouthpieces, 10,000,000 porcelain pipe bowls (covered), 5,500,000 imitation and 540,000 genuine meerschaum pipes with amber mouthpieces, 5,000,000 wooden pipe bowls and 15,000,000 completed pipes—a production of the value of about 6,000,000 marks ($1,428,000) per annum. The first meerschaum factories were founded in Ruhla in 1767, and practically the entire population is dependent upon this industry."

CURRENT BUSINESS NEWS.

Commercial.

Jones, the crop reporter, estimates the winter-wheat crop at 325,000,000 bushels, against 492,000,000 last year, and says the total yield of spring and winter will not exceed 560,000,000 bushels.

According to the governor-general of Netherlands-India, the government's Java coffee crop for this year is estimated at 52,000 pounds. In the colonial budget this crop was estimated by the minister at 167,000 pounds. The reports from private estates are also very disappointing, and the exports of Java coffee generally promise to be very small this year. It is not yet known whether the government will reduce the number of auctions or whether a smaller quantity will be offered at each sale.

The Weather Bureau's weekly summary, issued Tuesday, follows: "While there was well-marked deficiency in the mean temperature in the central valleys and the southern states in the week ending May 20, as compared with the normal, conditions were more favorable than in any week since April 1. In New England, the middle Atlantic states, the lower lake region and on the north Pacific coast, the week averaged warmer than usual and was generally favorable. Light to heavy frosts occurred in the lake region, central valleys, and light frosts as far south as Arkansas, Tennessee and the interior of the middle Atlantic states. Minimum temperatures much below freezing occurred throughout the central and northern Rocky mountain districts, the upper Mississippi valley and over the northern portion of the upper Mississippi valley and upper lake regions. Portions of the central and lower Mississippi valley and east gulf states have suffered from excessive rains, while droughty conditions exist in western Texas valley. A light fall of snow occurred in the lower Missouri valley and portions of the central Missouri valley on the 14th. There was much cloudiness over the northeastern Rocky mountain slope and in the central Missouri valleys. Throughout the Atlantic coast and gulf districts the sunshine was generally above the average."

Foreign crop conditions as published Tuesday in Broomhall's Liverpool *Corn Trade News*: United Kingdom—The outlook for the crops is favorable, although warmer weather with sunshine is needed. France—Conditions on the whole for the crop are favorable, still sunshine and dry weather is desirable. Supplies continue scarce. Germany—The weather is favorable, but crops are not doing well. Native supplies are almost exhausted. Hungary—The outlook for crops is favorable, some improvement having been noted during the past week. Roumania—Drought still continues, and if there is not rain within a week the situation will become critical. Bulgaria—Owing to the unfavorable conditions existing here, there is some talk of a prohibition of exports. Russia—In the southwest supplies are very light, while in the southeast offerings of hard winter wheat are liberal. Italy, Spain and North Africa—Crop conditions continue satisfactory. Asia Minor—A moderate improvement is noted in crop conditions. India—Mail advices confirm a bad harvest outlook. The exportable surplus is estimated at 29,600,000 bushels, against 28,000,000 bushels last year.

Special reports to the New York *Journal of Commerce* regarding spring-wheat conditions indicate that while the crop is late and the acreage reduced, its condition is good. The outlook for an average crop, if the weather in June and July proves favorable, is fair. The crop is two to three weeks late. These reports, which cover 75 per cent. of the spring-wheat crop, do not confirm the very unfavorable reports recently circulated.

The Fargo *Forum* says there is practically as large a wheat acreage in the southern half of North Dakota and in central counties; seeding is completed and well advanced in northern. Allowing for all the hard-luck stories, the North Dakota acreage will be within 15 per cent. of last year.

The State Department on Tuesday received dispatches from Consul-General Straight, at Mukden, giving the interpretation which he has agreed upon with China under the treaty of 1903, as to the rate of taxes to be charged on foreign goods destined to "open cities." Such cities are those which have been or may be designated as open to foreign settlement, and shipments of foreign goods to them can be made on payment of a 5 per cent. ad valorem duty in the case of coast cities, and an addition of 2½ per cent. when the goods are designated to open cities inland. The payment of this duty carries with it the issuance of exemption certificates, which are in reality passes through the many interior tax barriers, which are maintained in the interior of China, known as likin taxes. The only two open cities so far established are Mukden and Antung. The settlement is regarded as of some importance, as making conditions more certain and less burdensome for foreign residents in Manchuria.

The Chicago *Bulletin* figures the probable wheat surplus carried over in the United States next July to be about 150,000,000 bushels, or 50,000,000 more than last year. Commenting on the foregoing, Russell's circular says: "The reserve at the end of the short crop year 1904, when wheat advanced to $1.25 on the rust damage, was 57,000,000 bushels in farmers' hands and in the visible supply, so that of the 150,000,000 mentioned, 90,000,000 bushels might possibly be spared for export, even if the crop of wheat in the United States was only 535,000,000 bushels, which is the estimated consumption and seed requirements, and which is 30,000,000 bushels less than the Jones approximate estimate."

According to the Des Moines *Register-Leader*, "between $2,000,000 and $2,500,000 worth of binding twine has been ordered to harvest the grain crop in Iowa in 1907. This represents between 20,000,000 and 23,000,000 pounds. Much of this has already been shipped to the retail dealers in various parts of the state, and the remainder will be within the next sixty days. This is, of course, estimating that there will be the usual crop of grain. Twine is always ordered several months before harvesting time. Practically all of the twine used now is either sisal or standard. Some years ago manila was the principal grade used. However, it has become scarce, and the price has advanced so much that only a few cars will be used this season, where millions of pounds were used in days gone by. Formerly standard was made by mixing sisal with manila, and the price was about midway between manila and sisal. Now there is practically no manila in standard and the price is about the same as sisal. Sisal hemp is secured in Mexico."

The following table shows our postal growth since 1880 by quinquennial years:

	Post offices	*Postal routes, miles*	*Revenue*
1880	42,989	343,888	$33,315,479
1885	51,252	365,251	42,560,844
1892	62,401	427,990	60,882,098
1895	70,064	456,026	76,983,128
1900	76,688	500,990	102,354,579
1905	68,131	486,805	152,826,485
1906	65,600	478,711	167,932,782

Cost of mail transportation in 1906 was:

Domestic	$72,944,352
Foreign	2,895,756

Comparison—	*Total revenue*	*Total expenditure*
1906	$167,932,782	$178,449,779
1880	33,315,479	36,542,804
Increase	134,617,303	141,906,975

The Minneapolis *Market Record's* crop report says the season is one month late. The Minnesota wheat acreage is 73.1 per cent. of the average, South Dakota 94 5 per cent. and North Dakota 75 per cent. The report sees poor prospect for a satisfactory crop this year.

J. J. Golden, Deputy Minister of Agriculture for Manitoba, states that "if the farmers of the province continue to sow their wheat up to June 1, which they should do, and do not stand by any hard and fast rule of not sowing later than the 15th or 20th, they may nearly reach the acreage of last year and get nearly as good a crop. They will make up in oats and barley. There is considerably more ground prepared for immediate seeding this year than last. The ground is in excellent shape for forcing growth and will give a good harvest. The usual time required to ripen wheat is from 100 to 111 days, but this will give plenty of time before the frosts of September will come, as the offset in the weather rarely comes till September 15."

For the first time in the history of the postal service, the receipts for a quarter have exceeded the expenditures. The excess is $1,800,315.

The Royal Statistical Bureau of Prussia estimates the conditions in the Monarchy as follows:

	May 15, 1907	*April 15, 1907*	*May 15, 1906*
	Per ct.	*Per ct.*	*Per ct.*
Oats	80	..	80
Winter wheat	64	60	82
Winter rye	70	72	76

The acreage abandoned under winter wheat amounts to 34.3 per cent., indicating a loss of 1,200,000 acres, or 32,000,000 bushels. This deficiency, however, is offset by a slightly increased acreage under spring wheat. The amount of winter rye abandoned equals 3.4 per cent. The winter-wheat crop in Germany last year was 131,234,000 bushels from 4,358,000 acres. The winter-rye crop was 372,954,000 bushels from 14,265,000 acres, and spring rye 5,994,000 bushels from 31,700,000 acres.

Secretary Root and Mr. von Swinderen, the Netherlands minister, have concluded an agreement under section 3 of the Dingley tariff act by the terms of which, in return for an abatement of 25 per cent. in the duties imposed in America on imports of Dutch spirits, the most favored tariff rates are accorded to American goods entering the Netherlands.

The following are Sauerbeck's index numbers of the prices of forty-five English commodities, the average of the eleven years 1867-77 being 100:

Average		*Monthly Nos.*	
1878-87	79	December, 1889	73.7
1887-96	68	February, 1895	60.0
1890-99	66	July, 1896	59.2
1897-1906	70	July, 1900	76.2
1883	82	December, 1901	68.4
1896	61	April, 1906	76.5
1900	75	June, 1906	76.9
1901	70	September, 1906	77.5
1902	69	December, 1906	79.7
1903	69	January, 1907	80.0
1904	70	February, 1907	80.7
1905	72	March, 1907	80.0
1906	77	April, 1907	80.7

Recently Latham, Alexander & Co., bankers, addressed 6,000 letters to various interests in every cotton-growing county in the south, asking acreage estimates. Thus far 4,562 replies have come to hand, the average date being May 16, and the following table is the result:

	Acreage, 1907	*Acreage, 1906*	*Dec., per ct.*
Alabama	3,525,600	3,750,000	6
Arkansas and Missouri	1,744,200	1,938,000	10
Florida	229,080	249,000	8
Georgia	3,974,880	4,056,000	2
Louisiana	1,434,600	1,594,000	10
Mississippi	3,193,180	3,397,000	6
North Carolina and Virginia	1,201,860	1,211,000	1
South Carolina	2,276,540	2,323,000	2
Tennessee	703,430	773,000	9
Texas and various	9,392,000	9,392,000	..
Total	27,674,770	28,686,000	..

The total estimated decrease of cotton acreage in the United States for 1907 is 3.52 per cent., or 1,011,230 acres less than last year, and the average planting of the crop is two to four weeks later than normal. Weather conditions during April and the first half of May have been abnormal over the entire cotton belt. Temperatures have been unseasonably low, and rains have been constant and excessive. Farm work has been greatly interfered with and replanting has been generally necessary. Much of the contemplated acreage is yet to be planted. Sunshine has been deficient and there has been no growing weather, and poor stands have been the rule. Many correspondents complain of the scarcity and poor quality of the seed. The outlook for the crop is very unfavorable; it is, in fact, in a critical condition, and is dependent more than usual on favorable weather conditions for the balance of the season.

Whiskey, in bulk, has been advanced 2 cents per gallon, the high price of corn being given in explanation. This is the first advance in a year.

The misunderstanding over the Dominican treaty has now been cleared away, and, in the opinion of Secretary Root, there is nothing to prevent a speedy exchange of ratifications.

The French government has succeeded in sidetracking the bill before Parliament to increase the duties on American oil seeds. This action of the Cabinet gives fresh proof of the desire of the government to avoid tariff complications with the United States pending an attempt to arrange an agreement through a joint commission.

Financial.

A well-known European expert writer on foreign exchange and currency questions has lately estimated the stock of gold and silver money per capita. Rendered into American values, this per capita supply would be $35.60 in France, $25 in the United States, $16 in Germany, $15 in England, $8 in Austria, $7.60 in Russia, $5.20 in Italy. Circulation of fiduciary paper is figured at $22.40 for France, $16.80 for the United States, $16.60 for Spain, $8.20 for Italy, $7.60 for Germany, $7.20 for Austria, $5 for England and $4.80 for Russia.

Issues of new securities in England during April amounted to $81,446,000, the smallest, with the exception of January, of the year. Two-thirds of the total was made up of public loans.

All arrears of back dividends on the preferred stock of the Republic Iron & Steel Company, amounting to about 13⅜ per cent., have been satisfied.

Announcement was made on Thursday that the Delaware & Hudson had sold $10,000,000 4½ per cent. fifteen-year equipment notes to Kuhn, Loeb & Co. and to the First National Bank. The notes will be secured by a first mortgage on equipment valued at $11,000,000, and will have an annual sinking fund of $650,000.

The Comptroller of the Currency on Wednesday issued a call for a statement of the condition of national banks at the close of business on Monday, May 20.

The Mackay Companies preferred stock of $50,000,000 and common stock of $41,380,400 were listed on the London Stock Exchange Wednesday.

The Washington Terminal Company has applied to the New York Stock Exchange to list $10,000,000 first mortgage 3½ per cent. forty-year bonds, due 1945.

The New York Central system has sold to J. & W. Seligman & Co. and Moffat & White $5,000,000 four-year 5 per cent. gold notes of the Cleveland, Cincinnati, Chicago & St. Louis. The notes are dated June 1, 1907, and interest is payable semi-annually. They will be offered to investors at 96½. At this price they will return an investment yield of about 6 per cent.

The New York Produce Exchange has stricken Balaklala Copper from its trading list. This stock was listed on the New York Stock Exchange Thursday.

Internal receipts for April, 1907, were as follows:

	April	*Increase*
Spirits	$11,940,886	$1,364,775
Tobacco	4,279,901	508,291
Fermented liquors	4,627,868	225,341
Oleomargarine	94,580	57,017
Adulterated butter	200	*361
Process or renovated butter	12,009	3,670
Miscellaneous	74,359	6,101
Total	21,029,806	2,164,836

* Decrease.

Receipts from July 1, 1906, to April 30, 1907, amounted to $224,003,911, an increase of $17,706,537 over the preceding period.

Railroads.

Estimates furnished the railroad commissioners by the Boston & Providence give an idea of the expense of constructing a single mile of double-track interurban line, the total cost being $23,683 a mile. Different items are as follows:

251 tons 80-pound steel rails at $30.50 per ton	$7,768
64 kegs of spikes	332
704 sets of joints	1,302
5,280 ties	3,960
Laying, spiking, etc.	2,000
Ballasting and ditching	7,920
Drilling	500

It is said that Africa now has 15,000 miles of railroad, and is increasing mileage at the rate of 30 per cent. a year.

Industrial.

According to figures furnished by the *Marine Review*, the amount of ore on Lake Erie docks May 1 was 1,976,988 gross tons, as against 1,791,090 tons in 1906, an increase of 185,898 tons.

The *Iron Age* declares that the reasonable expectation for the future of pig iron is a moderate increase in both merchant furnace and steel works production in the next few months, culminating in important additions of steel-making iron in the latter part of the year. "It may turn out, however," says our contemporary, "that these developments within the trade may prove to be less important as determining factors than some originating from without which will have an important bearing on the volume of consumption."

It is stated by manufacturers of freight cars that all previous records for the manufacture of cars will be eclipsed during the year 1907. The months of May, June and July will be the busiest ever known, and there is no expectation of being able to supply the cars as fast as they are wanted.

The Allis-Chalmers Company has issued a circular giving some interesting facts regarding the lumber industry in the southern states. It says that one-half of the standing timber of the United States is below the Mason and Dixon line. The lumber products of the south in 1880 were valued at $39,000,000. In 1900 the value was increased to $90,700,000, and in 1905 the value of lumber products was $250,000,000.

STATE OF TRADE.

[A Summary of Special Telegrams to BRADSTREET'S.]

Crop and trade reports are irregular, but there is a slight improvement visible as a whole, owing to higher temperatures. This is most marked in the grain-growing sections of the west, southwest and northwest, where warmer weather with needed rains has helped crop sentiment and encouraged buying. Except in Texas, which reports seasonable weather, southern reports are mixed, owing to a few days of warm weather being followed by heavy rains which were not needed. Leading eastern markets report retail trade lagging, and, as a whole, the country's distributive trade needs steady warm weather to allow of the heavy retail business of the spring of 1906 being equaled. Agricultural conditions generally are backward, and here also best of weather conditions are needed for average development on planted acreage. Winter wheat has been helped by warm, growing weather and rains, but is still backward. Spring-wheat seeding has been finished, with a probable decrease of 10 per cent. in acreage from a year ago, which latter will go into flax, barley and oats. Corn planting, retarded for some time, is now general. Oats are a spotted crop at best, and vegetables are backward, scarce and dear. Cotton is now, apparently, the least favorably situated of all the great crops, replanting having been widely necessary, with seed scarce and high-priced. Compensating influences helpful to trade have been higher prices paid in recent weeks for grain and cotton, but this week's crop advices have induced liquidation of speculative wheat holdings, and for the first week in two months, wheat, corn and oats prices are lower at the close than at the beginning of the week, though midway therein the highest prices of the year have been touched. Cotton prices have gone higher on crop-damage talk. Collections, like retail trade, are backward as a whole. Money is easy, with country banks free buyers of commercial paper, but sentiment as to the future favors hardening of quotations. Railway earnings reports are rather better, gross gains for May being 17 per cent. ahead of 1906, with net returns for March showing a slight decrease. The car situation has improved and congestion complaints have about disappeared. Bank clearings at most cities outside of the metropolis and the south are in excess of a year ago. Export trade from the country's leading port has been greatly reduced by the dock laborers' strike, which still hampers shipments. Labor is well employed, strikes as a whole being few in number, and scarcity of help is a source of complaint in widely separated sections of the country.

Relatively, the best reports as to retail and wholesale trade come from the Pacific northwest. In the central west, southwest, northwest, east and south the volume of retail trade is behind a year ago almost without exception. As to jobbing trade, it is to be noted that reorder business has been also backward, but this week has seen a fair trade in this line east and west. A few western and most large eastern markets report good fall orders, but the general disposition is to await a clearer view of crop development before ordering heavily for fall. At leading eastern centers the demand for cotton goods is a feature of activity, and high raw material and cost of manufacture is reflected on advanced quotations for staple cottons of many kinds. The men's-clothing trade is rather quiet at retail and the demand at wholesale for men's-wear fabrics is not brisk for nearby delivery. Outside of the metropolis trade in building materials is fair to good, best reports coming from the west. There is reported some overstocking of cement, due to backward weather and checked railroad work.

The first week of good growing weather has made for a more optimistic feeling in the grain-producing regions. Damage to winter wheat by hot winds has been averted by timely rains in Kansas and Nebraska; corn planting, retarded by cold weather, has been made possible; spring-wheat seeding has been finished, with a decrease of 10 per cent. in the area from a year ago, and the Canadian acreage will perhaps equal 1906. A large area will go into corn, flax, oats and other crops in the northwest. Vegetable growth has been slow and high prices rule the country over. At the south conditions are irregular. A few good days gave rise to more optimistic feeling, but renewed rains cause fear for small, sickly plants, because seed is very scarce. The crop is three weeks late and the acreage will probably be smaller. Cool nights arrest growth.

Wheat was weak early in the week, with enormous dealings on heavy liquidation to take tempting profits, but rallied again, and on Wednesday touched the highest prices of the year, with July delivery at New York selling at $1.08⅞. Reports of warm weather and heavy rains in Kansas caused a heavy break on Thursday, and the close on that day was one-half cent below the price on the preceding Friday. Foreign crop reports were poor, special features being drought in southeastern Europe and reports of an abandonment of one-third of the Prussian winter-wheat area, and a condition of 64 against 82 a year ago. Exporters came in and bought freely on the break on Thursday. Corn was high early on cold weather retarding planting, advancing 1 cent, later lost in sympathy with the break in wheat, closing ½ to 1 cent lower on the week. Oats hardened slightly early, but eased later as regards futures, while the cash article rose nearly 2 cents from a week ago at New York.

Cotton has been irregular, breaking 28 to 30 points early in the week on liquidation to take profits, but regaining the entire loss later on renewed crop-damage talk and reports of heavy rains following a short spell of good weather. Spots are 1 point higher on the week.

Foundry pig-iron markets are firmer. Business for 1908 is appearing in various lines. Within the week 25,000 tons of malleable Bessemer were sold in Cleveland for delivery in the first part of 1908, the price basis being $22 per ton, valley furnaces. Some southern iron has also been disposed of for first-quarter shipment, the quotation being $18.50, Birmingham. Demand for basic pig for delivery in the last half of 1907 is quite heavy, with much business in sight. Large orders for steel rails for delivery in 1908 have been placed, the tonnage aggregating about 100,000 tons. Makers of farm implements have decided to wait no longer for price concessions, and they have ordered steel bars rather heavily—have taken more, in fact, than they did a year ago. Bar iron is weak. Business in structural material is good and specifications are heavy, but orders for shapes are not so large as for other finished lines. However, heavy business is pending. Western car builders are pushing plate mills for deliveries. Tin-plate, sheets, wire products, in fact all finished lines are in good demand. Old material, though still irregular, tends to improve. Cast-iron pipe is not so active as earlier in the season. Coke remains weak. In the east bituminous coal is quiet, and supplies not covered by contract are probably lower in price; but in the west the market is more active, purchases for future requirements being earlier than usual. Copper is slightly lower, offerings being larger, but business is light.

The New York stock market is nervous and rather more active than of late, having rallied to some extent from a severe depression early in the week, due to liquidation and renewed short selling, caused by a variety of unfavorable instances, among which crop conditions and anti-railroad measures, like the Public Utilities bill in New York, figured to some extent. Rumors of further impending borrowings by railroad companies were also effectual, and public interest is of the most limited kind. Foreign exchange has declined, thereby preventing gold exports to France, which seemed rather probable. Demand sterling is 4.86.70.

Bank clearings for the week ending May 23 aggregate $2,754,481,000, 2 per cent. under last week, but 6 per cent. over this week last year. Outside of New York exchanges amount to $1,116,516,000, 3 per cent. below last week, but 20 per cent. over the corresponding week last year.

Business failures for the week ending May 23 number 165, against 184 last week, 170 in the like week of 1906, 179 in 1905, 184 in 1904 and 181 in 1903.

Wheat, including flour, exports from the United States and Canada for the week ending May 23 aggregated 3,684,683 bushels, against 2,800,177 bushels last week, 4,334,373 bushels this week last year, 1,221,208 bushels in 1905 and 5,184,839 bushels in 1902. For the past forty-seven weeks of the fiscal year the exports are 153,279,766 bushels, against 122,799,367 bushels in 1905-06, 57,226,187 bushels in 1904-05 and 230,787,746 bushels in 1901-02. Corn exports for the week are 1,669,115 bushels, against 1,906,908 bushels last week, 818,097 bushels a year ago and 1,325,467 bushels in 1905. For the fiscal year to date the exports are 66,748,706 bushels, against 107,318,886 bushels in 1905-06 and 74,421,151 bushels in 1904-05.

IN CANADA.

Cool, backward weather still affects retail trade and filling-in orders from jobbers. Fall business, however, is good. Manufacturers and wholesalers are still busy making or shipping goods ordered earlier in the year. Cotton-mill employees' wages have been advanced. Strikes of longshoremen have affected exports. Better weather has made for more progress in spring-wheat planting, but good weather is needed for best results. The acreage, taken as a whole, may equal a year ago in the entire northwest. Less is heard as to railway congestion, and the situation is slowly approaching the normal. The strike of dock laborers at Montreal has failed. Toronto reports great activity in building in Ontario, and last year's record will be surpassed. Trade is of rather light volume in the northwest and collections are slow. Failures for the week number 19, as against 22 last week and 13 in this week a year ago. Clearings for the week aggregate $86,197,258, a gain of three-tenths of 1 per cent. over last week and of 38 per cent. over this week a year ago.

BACKWARD CROPS HELPED BY WARM WEATHER AND RAINS.

SOME LOST GROUND REGAINED IN KANSAS AND NEBRASKA. WINTER WHEAT BACKWARD BUT GROWING BETTER. CORN PLANTING, RETARDED EARLY, NOW GENERAL. SPRING-WHEAT SEEDING FINISHED. ACREAGE 10 TO 15 PER CENT. SMALLER. CANADIAN SEEDING LARGER THAN EARLIER EXPECTED. ACREAGE MAY EQUAL YEAR AGO. OATS SPOTTED, BUT MAY DO BETTER. GOOD GROWING WEATHER NEEDED. WHEAT CUTTING IN TEXAS NEXT WEEK. GREEN BUGS IN SOUTHERN KANSAS DO DAMAGE. ALL VEGETABLE CROPS LATE. COTTON REPORTS NOT GOOD. MUCH REPLANTING, SEED SCARCE AND HIGH, AND PLANT SMALL AND LATE.

WINTER WHEAT.

CHICAGO.—The winter-wheat crop in general has done well, holding its own and making a few slight gains the past week. Deterioration is, however, reported in parts of Nebraska, Kansas, Missouri, Ohio and Indiana. There are also spots in these states that show improvement. Dry weather with high, hot winds prevailed over Kansas and Nebraska until Thursday, when good rains fell in eastern, central and southern Nebraska and northern Kansas, with scattered showers in other sections. These rains will benefit the crop where it was not previously damaged by blight and freezing weather. Reports from Texas say that cutting wheat in southern districts will start by the end of next week. Seeding is about finished in the northwest, and the acreage in the states of Minnesota, North Dakota and South Dakota is estimated at 10 to 15 per cent. less than last year. High prices for wheat have induced farmers to seed later than usual, taking the risk of losing their crop, as perfect conditions from now on are necessary to insure a good yield. Oats are making a good stand in the central sections, but are spotted in Iowa and have been badly damaged in Kansas and Nebraska. Corn planting has progressed rapidly and a large acreage is being put in, the ground being in excellent condition, and in Iowa 80 to 90 per cent. is planted. Pastures are unusually short and the hay crop does not promise the possibility of an average.

OMAHA.—Crops will be greatly benefited by the recent heavy rainfall, which covered a large part of the state. Heretofore wheat and oats have not made satisfactory progress on account of the backward season. Corn planting has also been delayed.

WICHITA.—The wheat outlook is somewhat brighter, but bugs are still working and rain is needed.

ST. JOSEPH.—Reports on the condition of wheat are somewhat conflicting, but general reports indicate that the plant is less favorable than a week ago, due to lack of moisture. Good rain would improve crops greatly.

LINCOLN. — Recent rains, it is thought, will help crops.

KANSAS CITY.—Reports regarding wheat are more favorable, and the warm weather coming on has been of material benefit.

DAVENPORT.—Heavy rain fell on Thursday, stimulating the growth of backward crops.

SIOUX FALLS.—Slightly warmer weather the past week improved crop conditions. Wheat and small grain are backward, but the stand is good and healthy. Corn planting is now in progress.

ST. LOUIS.—In some sections corn planting is well under way.

SIOUX CITY.—Crop conditions have improved, the weather being warmer and some rain having fallen.

DES MOINES.—While the season is late as to crop growth, farming operations are in good progress, general rains and warmer weather having improved the situation. Small grains and hay indicate a smaller production than the average. A great portion of the corn acreage has been planted under excellent soil conditions.

DETROIT.—Market gardeners and farmers have been seriously handicapped in seeding and other work, with a resulting scarcity of, and high prices for, vegetables and kindred products.

INDIANAPOLIS.—Reports from different parts of Indiana are more encouraging than at any time in the past. Wheat in the most extreme southern part of the state is said to be in excellent condition; the central and eastern parts fair, but a little spotted; the northern district continues to report a poor crop prospect. Corn is being rapidly planted. The cold spell of a few days ago is reported to have done little or no damage, except in a few districts.

CINCINNATI.—Crop conditions continue to improve and prospects for small fruit are good.

SPRING WHEAT.

ST. PAUL.—The weather in Minnesota and North Dakota was better during the past week, but it was still cool and unfavorable for crops. In southern Minnesota wheat is up and is doing well, and seeding is practically completed in Minnesota and North Dakota. In northern

Minnesota conditions are only a little behind normal, and in places the crop looks better than for several years. In southern North Dakota about 80 per cent. of last year's acreage has been sown, which is the largest for any section of the state.

MINNEAPOLIS.—Crop conditions in the northwest have undoubtedly improved within the week, but more seasonable weather is much needed. Early sown wheat is making good progress in Minnesota and South Dakota, and wheat seeding in North Dakota is practically finished. It is hard to say what the acreage will be, but it seems likely to be less than last year's, though present high prices may induce more planting. Of other grains the acreage will undoubtedly be larger, and seeding of coarse grains is now being vigorously carried on. The ground is, on the whole, in excellent condition, and prospects based on conditions now may be safely counted as good.

SAN FRANCISCO. — Absence of rain and diminished acreage will reduce the wheat crop full 50 per cent. below the usual yield.

SPOKANE. — Crop conditions point to an abundant harvest.

PORTLAND, ORE.—Winter as well as spring sown wheat is in excellent condition.

IN CANADA.

WINNIPEG.—Wheat seeding will be finished this week and the crop put in good shape. Conditions were very favorable the past week. The acreage will nearly equal last year's. The weather is fine but cool, and not much growth has been made as yet, but this is owing to late seeding. The acreage sown to oats, barley and flax will probably exceed any previous year.

CALGARY.—Wheat seeding has been practically finished in Alberta. We expect 100 per cent. increase over last year in acreage. Condition first-class.

AT THE SOUTH.

NEW ORLEANS.—Weather conditions have been good the past week, but it is raining again, and as there has been an excess of rainfall this spring, the present storm breeds an extreme degree of pessimism. Warm, clear weather is a necessity from now on if there is to be a fair yield of cotton. Seed for replanting is almost out of the question. Sugar cane and rice are in good condition.

ATLANTA.—Gloomy reports come from some sections regarding cotton, the plant dying either from recent cold weather or from poor seed. Others are of the opinion that the hot, dry weather now prevailing will bring the plant back to a healthy condition, and the concensus of opinion is that the crop will not be off more than 25 per cent., provided future weather conditions are favorable.

MEMPHIS.—Replanting of cotton is well under way. Crop prospects have improved.

FORT WORTH.—The weather the past week has been more seasonable, and a brighter feeling exists

LITTLE ROCK.—Cotton is three weeks late and the acreage is 5 per cent. smaller. Rain is needed to bring up the last planting. A good fruit crop is now practically assured, and some shipments of peaches have already been made.

JACKSONVILLE.—Crop conditions are promising, and pineapples are moving to market.

MOBILE.—Favorable weather prevailed during the past ten days, and farming operations are making good progress.

CHARLESTON.—Cotton is in its first stage of growth, and in some sections of the state it is suffering from the unseasonably cold nights, and is not only small and backward but a great deal is dying in some sections.

RICHMOND.—In North Carolina cotton, while not far advanced, has a good stand and the prospect now is for at least an average crop. The acreage of tobacco will probably be about the same as last year, but because of the necessity of reseeding in many localities the crop will be probably later than usual.

MONTGOMERY.—In many instances cotton has been planted three times. The plant is small and late. Prospects for a good stand are very poor.

TRADE REPORTS.

Business in dry goods at New York has continued fairly active, though there has been a falling off in several departments owing to the backward condition of the weather. This is notably the case in connection with ladies'-wear goods. Manufacturers of shirt waists and similar lines are having no reorder business, and in many cases first order have been very light. Cotton goods continue active and prices are fairly maintained. Dress goods are also in request, and silks are steadily gaining favor. The clothing business is of fair proportions, but is not as active as it ought to be. Collections generally are good. Conditions in the cotton-yarn market are still strained, and, notwithstanding the high prices willingly offered, manufacturers find it difficult to obtain requirements from spinners. There is also a shortage in woolen and worsted yarns of some grades, and prices have advanced. The better grades of raw silk are also scarce, but transactions are limited in extent. There is some improvement in the cloak and suit trade, and collections also are better. The millinery and hat trades have in general suffered from the backward season, but are now more active. Jobbers of hosiery, knit goods and gloves report a falling off in sales, but business in shirts and neckwear is still of large proportions, and manufacturers are unable to promptly fill all their orders. High prices of raw materials have in some instances cut profits. Rags and shoddy continue in poor demand. A general feeling of satisfaction is expressed in the wholesale notion line; business is brisk and collections good. The butter market is firm, and though receipts are large, the demand is also active. Eggs continue to be stored in quantities, which prevents the market from being glutted. Exports of cheese are light. Southern grown vegetables are scarce and are in brisk demand at good prices. Wholesale grocers report trade still dull, but the retail business is active, though prices in some lines are high. The speculative advance in wheat has stimulated buying by jobbers of flour and given a firmer tone to the market. Receipts of live stock and dressed meats about equal requirements. The wholesale tobacco trade is quiet, high prices with a scarcity of goods restricting trade, and manufacturers of cigars report a falling off in orders. Collections in the furniture trade are slow, as a rule, and business dull. The supply of cotton cordage is totally inadequate to requirements, jobbers complaining of difficulty in obtaining goods. Prices are very strong and a further advance is anticipated. One large manufacturer of tin and enameled ware reports orders fully up to last year and that collections are good, but others complain of a falling off in business and that collections are difficult to make. The heavy advance in price of brass and copper has not interfered with the business of manufacturers using these metals, who report trade and demand brisk. Pig iron continues in request, and pig tin is very scarce, with prices high and irregular. Copper is quieter, and lead is less asked for. Machinery dealers report fewer orders. In the wholesale paper trade prices are stiff and orders are not filled as quickly as desired. Adverse weather conditions interfere with business in paints and painters' supplies, and dealers find collections slow. The real-estate market shows considerable activity in high-priced property. Some building loans of considerable magnitude, for a fixed term of years at 4½ per cent., have been made. Prices of lumber are well maintained generally, but bricks are cheaper. Cement is in less request.

The following telegrams show trade conditions at the cities mentioned for the week ending May 24:

BOSTON.—Business in dry goods and wearing apparel for spring is still backward. Novelty piece goods and ready-to-wear garments designed especially for spring are being carried in considerable amounts by retailers, and there has been early advertising of clearance sales. All lines of staple textiles remain firm, and in many divisions of cotton fabrics, prices still tend upward. Manufacturers of cottons are generally sold ahead for several months, and some are sold up into 1908. Cost of manufacturing is increased by advances made in wages, but mill owners find difficulty in getting help enough to bring up production to full capacity. Chemicals are fairly active, with prices well maintained. In drugs there has been a good demand for quinine in jobbing quantities, but opium has been rather quiet. Dealers in dyes and tanning materials report that while orders are not strikingly large, there is a good, steady movement, which makes monthly averages satisfactory. Trade in furniture is of fair volume, but collections continue slow. In electrical goods collections are slow, but business is fairly large. Northern and eastern lumber markets are quiet, the continued bad weather retarding business. Southern lumber is active, especially in the cypress line, while prices of western lumber and hardwood lines remain firm. All lines of painters' supplies are reported active. Bituminous coal is dull, but anthracite continues brisk, especially in retail lines, the unusually cool weather having upheld demand. Wholesale liquor dealers report fair trade for the past week. There is an increased demand for light wines. Retail business is rather quiet. Brewers are busy and report a brisk demand for their products. Leaf-tobacco dealers report ordinary trade, and prices are firm. Unseasonable weather has had a marked effect upon produce and berries, which are of poor grade and high in price. Wholesale fish dealers state arrivals of fresh mackerel disappointing, but otherwise the market is well supplied.

PROVIDENCE.—General business conditions are good. The cotton goods market is in excellent condition, with prices holding firm; supplies are not plentiful. The manufacturing jewelry trade continues active, and in the worsted goods market inquiry and sales are strong. Collections are slow.

PORTLAND, ME.—The weather continues cold and the spring is backward, in consequence of which farmers have done but little planting. Retail trade is backward. Sardine packers are receiving a fairly good supply of fish. Summer hotels and resorts are preparing to open for the season, and a few are already open.

NEW HAVEN.—Lack of summer weather still retards sales of dry goods and clothing, and conditions in these lines remain unsatisfactory. There is apparently a good amount of construction work in progress, and demand for lumber and builders' supplies is quite active. Manufacturers in all lines are for the most part well supplied with orders, although in a few instances a quietude is reported. Foodstuffs are reported in ready sale and the markets are firm. Collections, as a rule, are satisfactory.

PHILADELPHIA.—There is little doing in wool. Manufacturers, as a rule, are running full, and demand for cotton yarns shows little variation. The weather has been poor for dry goods, and distribution has not been large. Collections are still draggy. Flour is draggy and buyers are taking only what they actually need. Millers are advancing quotations in sympathy with wheat. Chemical and dyestuff markets lack vim, though a fair business is being done in staples. Paints and glass have improved somewhat during the week, but business is not brisk. Lumbermen are fairly active, though business is not quite up to expectations. Prices continue very high and hardwood dealers talk of an advance. Demand for hides, leather and skins shows no marked activity. Wholesale and retail shoe dealers report fair trade, but business expectations have not been realized. Tobacco sales are about normal for this season, though manufacturers of cigars are very busy. The output for April in the first district of Pennsylvania exceeded that of April, 1906, by 7,000,000 cigars. There is considerable inquiry for Havana; the new crop taking somewhat longer than usual to prepare for market, old goods are looked for, Vuelta Abajo, first cap, selling for $1.05; Remedios, first cap, 80 cents; Pennsylvania broad leaf, also Wisconsin, 20 to 23 cents. Collections are slow. Liquor distillers report withdrawals from bond by wholesalers heavy, though actual sales are at present small. The hearings and rehearings on the provisions of pure food laws as to the name for various grades of whiskey has kept the trade disturbed. Even with the recent decision of federal authorities, the matter appears no nearer solution, and a court decision may yet be required. Those holding straight rye are not pressing sales, expecting higher prices. The pig-iron market has maintained its strength, the enormous production being quickly absorbed at high prices. For finished materials business is not so active, and prices are not as strong as they were. Domestic and steam coal is in fair demand at steady prices.

PITTSBURGH.—The pig-iron market continues quiet but strong. One sale of Bessemer iron for May and June delivery, of 2,000 tons, is reported at $23.50, valley furnace, and a sale of 1,000 tons of basic for prompt shipment at $24. A number of consumers are short of material, but there seems to be a disposition with some to hold off until their necessities are immediate, and the probabilities are that such iron as will be obtainable, if present conditions continue, will command a premium. Sales of small lots of foundry and mill iron have been made for delivery during first quarter of 1908 at $21 and $22. Furnace coke is still weak, with plenty offering at $2.25, while foundry coke is a little stronger at $3 to $3.25, at the ovens, for last-half delivery. Nominal quotations for pig iron at the valley furnaces for prompt delivery are as follows: Standard Bessemer, $24; chilled basic, $24; No. 2 foundry, $25, and gray forge, $22.35. Standard Connellsville furnace coke is quoted at $2.25 and foundry coke $3 to $3.25.

BUFFALO. — Trade is normal, but owing to the continued cold weather, has not increased to any considerable extent. The live-stock market remains active, with prices firm. Collections are fair.

BALTIMORE.—The volume of business for May, at retail, has been below normal, owing to unseasonable weather, and much less than in 1906. In addition, larger stocks are in hand and settlements with supply houses have been more or less slow. Shoe jobbers report fall orders fully equal to those of 1906 in volume, but with little business for immediate shipment. Dry goods and notions at wholesale are very quiet, with but little filling-in business, and while future orders are up to 1906, present conditions in these lines are disappointing. Leaf tobacco is quiet; receipts are light; prices firm; demand limited, manufacturers, as a rule, being well stocked, and collections are fair. Harness manufacturers continue well employed, with a fair volume of business in new orders. A slight improvement is noted in woodenware, crockery and tinware. Paper at wholesale is active, prices firm and general conditions satisfactory. Turpentine receipts show a decided falling off in comparison with 1906, with prices 66 cents per gallon. Wholesale business in groceries is fairly good. Flour is active, with an advance expected, due to the condition of the wheat market. Oils very firm, with an upward price tendency. General collections are slow, and while there is a slight easement in commercial demands, the supply at banks is fully taken at 6 per cent.

CINCINNATI.—General business continues good. Money is in only moderate demand.

DETROIT. — Industry continues actively employed, particularly in building. The supply of dwelling accommodations is not equal to the demand, owing to the continued influx of artisans of all trades. The labor situation is harmonious except in the case of car-shop helpers and laborers, 2,000 of whom are out on strike for a higher wage scale. Continued unseasonable weather is affecting the movement of seasonable fabrics in all lines. Jobbers of dry goods, clothing, hats and shoes report a fair volume of business, but not up to the seasonable average, weather conditions preventing. Collections are more or less slow.

INDIANAPOLIS.—In the varnish and tile trades business is very good, but collections slow to fair. Business in wholesale paper is fair and collections good.

CHICAGO.—Trade conditions are barely holding their own in the way of sales for immediate delivery, but a good business is being booked for fall shipment. Cotton goods are firmly held and jobbers have moderate stocks. Buying of iron and steel is of good volume. Specifications are numerous and no cancellations are reported. Implement makers have made large purchases of steel. Sales of steel rails are 70,000 tons, and structural 25,000 tons. Pig iron, while not selling as readily, is held at full prices both for immediate and future delivery. Supplies of sheet iron with local furnacemen are low. Large consumers of bituminous coal are placing orders earlier than usual, and the action of the railroads in charging extra for reconsigning coal is having a beneficial effect on the Chicago market. Lumber and building materials are selling more readily. The car situation on eastern and western railroads has improved. Advances in butter and white beans and declines in potatoes and eggs were the features of the produce market. Live-stock receipts are heavy and prices generally lower, increased runs being due to short pastureage and advanced value of feed. Money is steady and demand not so good. Local and country banks are buying commercial

paper freely at 5 to 5½ per cent. National and state banks increased their deposits $35,882,273 since March 21. Loans increased $3,932,650, and cash reserves increased $31,955,705. Collections are fair.

TERRE HAUTE.—Retail trade is more active owing to a day or two of better weather, but the loss already sustained can hardly be overcome. Wholesale trade is moderately good. Collections are fair. Oil prospectors are not so numerous as formerly.

ST. LOUIS.—Favorable weather during the past week has done much to stimulate trade, and as a result filling-in orders have been of fair volume. In dry goods, notions and kindred lines spring business has not been fully up to expectations, though the volume of business is greater than last year at the same period. Manufacturers of and jobbers in clothing report quietness. Business in shoes shows a steady increase at firm prices. Dealers in farm implements report an active demand for all grades at good prices. Several large office buildings are now under way and other contracts have been let, consequently building material is in active demand at firm prices. Retail trade, especially among department stores, shows some improvement, although on the whole trade is quiet. Collections range from fair to good. Money is in good supply, but demand is only fair.

KANSAS CITY.—Normal conditions prevail with wholesalers in leading lines, and while trade is good the spring rush is practically over. Collections are fairly prompt.

MILWAUKEE.—The weather is still against trade expansion. Collections are a little slow.

SIOUX CITY.—Warmer weather prevails. Trade conditions have improved. Collections are fair.

DAVENPORT.—Retail trade has improved some the past week, but it is not what it should be. Manufacturers are busy. Collections are slow.

ST. PAUL.—All lines report seasonable gains in the volume of business, and orders for future delivery are exceedingly large, it being the record week for wholesale dealers in dry goods. Collections have let up some since the 15th, and have been only fair for the week. With favorable growing weather trade conditions in this section will be prosperous.

MINNEAPOLIS.—While the weather is improving it is not yet sufficiently seasonable to make trade in general what it should be at this time of year. On the other hand, no serious complaints are heard as to present volume, which is in excess of last year. Collections are improving. Flour is quiet, as the high prices of wheat make buyers very conservative, but mills are fairly busy on back orders.

OMAHA.—General business is considerably retarded by unseasonable weather. Collections are only fair.

LINCOLN.—Weather conditions cause a general falling off of business. Collections are slow to fair.

CHARLESTON.—Trade is only fair and collections are slow.

RICHMOND.—Dealers in machinery, mill supplies and metal are having a good trade, and foundries are operating at full capacity. Seasonable weather has resulted in a fair demand among retailers, and there is, consequently, a moderate amount of reordering of shoes, dry goods, hats and kindred lines. Jobbers of groceries and provisions have done a satisfactory business, and manufacturers of flavoring extracts have increased their sales considerably. An active demand for berries and vegetables has improved conditions in eastern North Carolina, and all offerings of fair quality are readily taken at good prices. Collections are fair.

AUGUSTA.—Trade is quiet and collections are only fair.

ATLANTA.—Wholesale dealers in dry goods and hardware report the volume of fall orders equal to last year's. Furniture manufacturers state that collections and business are only fair. Live stock sales are off from last year.

JACKSONVILLE.—Collections are a little slow, but trade is holding up well. Money is in full supply and demand is good.

BIRMINGHAM.—Southern foundry No. 2 iron is strong at $23. Favorable weather the past few days made for a sharp increase in dry goods and clothing. Jobbing trade is fair, but collections are slow.

MOBILE.—Country merchants are buying fall lines in a conservative manner, but with continued good weather an increase in sales is expected. Collections have improved. Retail trade is quite active. Lumber remains sluggish. Naval-stores operators are now able to gather and manufacture the crude gum, owing to favorable weather. Prices are satisfactory. Full cargoes of bananas are arriving and are selling at fancy prices.

MONTGOMERY.—Wholesalers report only a fair volume of business, and until the cotton crop is further advanced there is a tendency not to push trade. Business in all lines is affected by the weather. Collections are very slow.

CHATTANOOGA.—Trade in all lines is good. Collections are fair to good.

MEMPHIS—Warm, clear weather is still stimulating retail trade. Spring wholesale business is about over. The advance in cotton prices has improved collections.

NASHVILLE.—On account of the unfavorable planting season there has been some disposition manifested by country merchants to countermand orders, but no great inconvenience of this sort has been felt and sales and shipments have been well up to expectations.

LITTLE ROCK.—More seasonable weather has caused a marked improvement in practically all lines of trade.

NEW ORLEANS.—Retail trade is inactive and not up to the volume of last season. Jobbers report only filling-in orders.

FORT WORTH.—Trade in jobbing and retail lines is fairly active.

SAN FRANCISCO.—Dullness continues in all lines and collections are difficult to make.

SEATTLE. — Business has resumed its usual activity, and jobbers report heavy orders coming from Alaska. The shingle stock is reported low by dealers. Collections are fair and prices are firm.

SPOKANE.—Labor is well employed and business in all lines is good. Collections are fair.

TACOMA.—Favorable weather continues and trade in general is good. Building is especially active.

PORTLAND, ORE.—The export of wheat, flour and lumber continues heavy. All jobbers report the volume of business more than in any previous year. Collections are good.

TORONTO.—While spring retail trade continues slow owing to unfavorable weather, there is still a good movement at wholesale. Wholesalers are now sending out shipments of many lines of summer goods which were not heretofore obtainable. A good business is also reported in fall lines. Shipments are heavy, and less is now being heard about railway congestion. This does not mean that the railroads have caught up with the work in hand, but that they are making great headway and are gradually improving the situation. The backward spring will no doubt affect Ontario crops. Reports say that winter wheat has been injured on low-lying land, but that about 60 per cent. of the best wheat districts present indications of as good a yield as last season. One of the greatest trade factors at the moment is the remarkable activity in building going on in all parts of the province. While last season was a big one in this respect, there is every indication that it will be exceeded by the work it is proposed to do this year. There is a shortage of small dwellings in this city, despite the great number erected last year. At the present time it is impossible to rent anything in the shape of a house under $20 or $25 a month. Vacant land in all parts of the city is being very rapidly built upon.

MONTREAL.—Little improvement has been noted in wholesale sorting trade. The weather throughout the country is still more or less unfavorable to spring business, and retail trade is accordingly quiet. Wholesalers have a fair amount of repeat orders on hand, and they report orders for fall lines heavy. The dry-goods trade is busy shipping orders which have been delayed, and manufacturers of textiles are still working overtime in order to fill orders in hand. Values of all lines are very firm. The wages of cotton-mill operatives at Montreal and Valleyfield have been advanced, which action on the part of the employers has averted a strike which would have been especially serious, owing to the present oversold condition of the market. The shipping trade here has been much affected by the longshoremen's strike. The men, however, have gone back to work, accepting the employers' terms. Hardware is in active demand. Metals are firm in tone. The demand for paints is reported light owing to continued cool weather. Groceries are active, with sugar and canned goods very firm. Boot and shoe travelers are doing a good business with fall samples. Manufacturers are busy and leather holds firm. Collections are generally fair.

VANCOUVER-VICTORIA.—Trade on the Pacific coast has a fairly steady tone, although the volume of business moving is not heavy. Demand for wholesale stocks is about normal. The shortage of railway cars is having some effect upon general trade, as also is a strike in the building trades. All provincial industries are actively engaged. Collections are satisfactory.

WINNIPEG.—Retail trade is still slow on account of cool weather. The hardware and grocery trades, however, are more active than they have been for some time. In dry goods, heavy lines have been well cleared out, but reorder trade for spring and summer goods has been light. Collections still have a slow tone. The crop outlook is not particularly bright.

FINANCIAL.

Money Market.

The possible withdrawal of part or all of the $48,000,000 of special government deposits made by Secretary Shaw in the autumn and winter figured as one of the chief factors in connection with the New York loan market. In view of the fact that about $41,000,000 of the maturing 4 per cent. bonds will have to be paid off on July 1, it is considered likely that Mr. Cortelyou, the present secretary, will require the banks to soon surrender at least that amount of the deposits in question. In fact, his visit to New York this week was supposed to have reference to the arrangements for that purpose, though nothing official has yet been made public. Such expectations were, indeed, the cause for a firmer feeling in regard to time money, sixty-day loans being offered less freely, while loans for longer periods remained steady at 5 per cent., and arrangements maturing after January 1 next at 5¼ per cent. There continues, however, to be very little inquiry for time money while Wall street can supply its rather limited requirements with call money at such easy rates as at present. Commercial paper is dull, there being a fair supply, with a moderate buying demand coming mainly from the interior.

New York Banks.

While the increase of $3,405,900 in the cash items shown by last Saturday's New York bank statement was in agreement with the estimated actual gain, there was also a reduction of $1,414,900 in the loans, the latter change being apparently due to liquidation in the stock market. As a result, the item of deposits increased $1,681,800 and the reserve requirements were $420,450 greater, but the surplus reserve increased $2,986,450, making the statement a favorable one. The figures compare as follows with the statement of the preceding week:

	May 18	*May 11*	*Changes*	
Loans	$1,124,808,700	$1,126,223,600	D.	$1,414,900
Specie	215,060,200	212,484,800	I.	2,575,400

Foreign Exchange.

During the earlier portion of the present week foreign exchange rates held firm at the highest figures thus far quoted in the present year, demand sterling on Monday being up to 4.86 95. It was accordingly expected that, in spite of the evident reluctance of international bankers to engage in such operations, some gold would be engaged at New York for shipment to Paris, as it was also understood that the Bank of France had waived its objections to paying interest on the specie while in transit. The market, however, did not hold, the demand sterling rate declining to 4.86.75 on Tuesday, and on Wednesday there was a further moderate recession, bringing the actual rates down to 4.86.60@4 86.70. This movement was attributed in a large degree to the anticipated withdrawal of part of the United States government deposits from the national banks, there being a significant hardening of rates for short-time loans. Under the circumstances it was concluded that gold exports would prove unprofitable. It is noted that the supply of commercial bills is rather scanty, in which connection the strike of the New York dock laborers is thought to play some part. On Friday the market was firmer, with a slightly better demand for remittances.

POSTED RATES OF LEADING DRAWERS FOR LONG AND DEMAND STERLING.

May 18	*May 20*	*May 21*	*May 22*	*May 23*	*May 24*
4.84½ @ 4.87½	4.84½ @ 4.87½	4.84½ @ 4.86½	4.84½ @ 4.87½	4.84½ @ 4.87½	4.84½ @ 4.87½

ACTUAL BUSINESS BANKERS' DEMAND STERLING.

4.86.85 @ 4.86.90	4.86.85 @ 4.86.95	4.86.75 @ 4.86.85	4.86.60 @ 4.86.75	4.86.60 @ 4.86.70	4.86.70 @ 4.86.75

ACTUAL BUSINESS BANKERS' SIXTY-DAY STERLING.

4.83.85 @ 4.83.90	4.83.85 @ 4.83.90	4.83.80 @ 4.83.85	4.83.70 @ 4.83.85	4.83.50 @ 4.83.65	4.83.55 @ 4.83.60

Closing quotations on Friday for actual business in other classes of bills were: Cables, 4.87.15@4.87.20; commercial bills, 4.82¾@4.83½; francs, 5.19⅜ less 5-64@5.16¼ less 1-32; reichsmarks, 94 5-16@94¼ less 3-64.

The Bank of England's discount rate is unchanged at 4 per cent. During the week ending last Thursday the bank gained £192,836 in gold, and its proportion of reserve to liability declined from 46.97 per cent. to 46.83 per cent. The weekly return showed an increase of about £270,000 in loans. In the London open market call

money is 3@3⅜ per cent., and discount remains firm at 3⅜@3½ per cent. The Bank of France this week reported an increase of 20,125,000 francs in its gold, and reductions of over 65,000,000 francs in note circulation and of 66,000,000 francs in its discounts. Its rate remains unchanged at 3½ per cent., the quotation for discount in the Paris market being 3 7-16 per cent. At Berlin the bank rate is 5½ per cent. and the market rate 4½ per cent.

New York Securities Market.

Influences bearing upon the action of the stock market have been generally bearish. With the beginning of the week there appeared to be considerable selling pressure, representing undoubted liquidation of long stocks, this demonstration being most prominent in such issues as Union Pacific, Southern Pacific, the Steel shares and the Hill stocks. There was also a renewal of activity on the part of the bearish interests, and the volume of transactions during the earlier days of the week was considerably greater than had been seen for some little time back. Toward the middle of the week, however, the selling of the stocks which had led in the break appeared to be exhausted, and covering by shorts set in upon a scale sufficient to cause rallying tendencies on Wednesday and Thursday. The market, however, continued unsettled, one special reason for which was furnished by the weakness of New York Central upon the reports relative to the issue by that company, or its auxiliaries, of a large amount of new notes or other obligations, the intimations on this score being that the company will be obliged to secure some $40,000,000 of new capital with which to meet its requirements. Not only did New York Central sell down to a figure below the lowest point reached in the panicky market of last March, but to one under the lowest price for several years. In addition to this, there were reports of other pending creations of capital, which were, as usually, badly received, although it might be noted that in the case of one corporation, the Delaware & Hudson Company, announcement was made early in the week that its management had determined to postpone the sale of an issue of 4½ per cent. equipment notes, despite the fact that a syndicate has been formed which agreed to take the new securities, and will doubtless do so later on when financial conditions are more favorable. On Friday the market, however, developed a considerable amount of strength under the lead of Union Pacific and closed strong at a partial reaction.

The money market was a little firmer as to sentiment, without much change in rates for time money, while call money was slightly easier. At the same time the general expectation that the Secretary of the Treasury will soon direct a reduction of the $48,000,000 of special government deposits in the banks, in order to provide for the redemption of the remaining 4 per cent. United States bonds on July 1, tends to create a feeling that rates of interest will be higher during the next month or so. This phase of the situation, it would seem, was in a measure responsible for the declining tendency in exchange making its appearance on Wednesday, and for the time being preventing gold shipments to Paris, which had seemed almost inevitable when the week opened. At the same time the foreign exchange market was again somewhat stronger on Friday. It cannot be said, however, that money played much part in connection with the stock market. The crop situation was discussed to an increased extent in Wall street, and, although the news as to weather and other conditions was, on the whole, better, speculative interests were inclined to take an adverse view of the effect of a reduced wheat crop upon railroad properties. There were a number of rumors afloat involving attempts to explain the liquidating sales of certain stocks, one of them being that a large house, which is about to go out of business, was having a final cleaning up preparatory to its dissolution, while the fact that the selling of steel common seemed to come from Pittsburgh was also made occasion for more or less guessing regarding the interest which was letting go of its holdings. The announcement that the Master's report in the 80 cent. gas litigation was in every respect favorable to the Consolidated Gas Company had a good effect on that stock at first, but this was lost in view of statements that the city authorities would now vigorously press action in regard to the alleged invalidity of the company's franchise.

Bank Clearings.

[By Telegraph to BRADSTREET'S.]

BRADSTREET'S Bank Clearings Report for the week ending May 23 shows an aggregate of $2,754,481,000, as against $2,817,502,000 last week and $2,597,582,000 in the corresponding week last year. Canadian clearings for the week aggregate $86,197,000, as against $85,866,000 last week and $62,333,000 in this week a year ago. Following are the detailed returns by cities for this week and last, with percentages of increase or decrease as compared with this week in 1906:

	May 23	*Inc.*	*Dec.*	*May 16*
New York	$1,637,964,000	....	1.8	$1,653,926,000

Statistical Situation of Cotton.

The aggregate world's visible supply of American and other cotton last week, as made up by the New Orleans Cotton Exchange, is shown, with comparisons:

Week ending	*May* 17, 1907	*May* 10, 1907	*May* 18, 1906
American	3,079,329	3,191,069	2,435,916
Other kinds	1,411,000	1,422,000	1,545,000
Total	4,490,329	4,613,069	3,980,916

Of the world's visible supply, as above, there were afloat for or held in various countries on the dates given the following quantities:

	May 17, 1907	*May* 10, 1907	*May* 18, 1906
Great Britain and continent	2,705,000	2,762,000	1,946,000
Egypt	133,000	144,000	112,000
India	807,000	804,000	1,072,000
United States	845,000	903,000	851,000
Total	4,490,000	4,613,000	3,981,000

Following will be found the movement of cotton into sight for the week and season, as compiled by the New York Cotton Exchange:

	This week	*Last week*	*Last year*
Week	66,842	82,074	98,368
Season	12,897,062	12,830,218	10,357,863

Boston Shoe and Leather Market.

Sales of cheaper grades of leather are not up to the usual volume, but the better grades are doing well. Prices are holding up excellently. There have been some lots on the market at less than current quotations, but these are understood to be lots that are defective in quality, as a result of imperfect tanning or finishing. Raw stocks are held very firmly, and opportunity to buy under the market is scarce, also implying lack of quality rather than desire to turn merchandise into cash. Some shoe manufacturers have some good orders on hand and others under consideration, but so far as actual fall business in sight can be measured, the volume is not up to last season by many thousands of cases. There is time yet, and the hopeful are still cheerful. The better grades of shoes, as previously noted, are selling much better in proportion than the cheaper grades. Shipments now include hot-weather goods, but figures are not up to last year's. Following are the *Shoe and Leather Reporter's* figures: Last week, 102,533 cases; preceding week, 104,716; last year, 105,155; total for 1907, 1,916,948; total for 1906, 1,969,003; decrease, 52,055.

Wool Markets.

On account of the great scarcity of the wools most wanted trade is very quiet and the tendency is easy, as dealers are looking for purchasers for odd lots at concessions. One lot of 200,000 pounds quarter blood fleeces recently sold at 31@31½ cents for Michigan and slightly lower for Missouri and Wisconsin; scoured territories also sold at 68@70 cents for fine and 66@68 cents for fine medium, best quality, with poorer lots at 65@67 cents for fine and 63@65 cents for fine medium. The new Utah wools are arriving and are in very good condition, but asking prices are too high. Foreign grades are very quiet, though one lot of fine Australian has sold at 47 cents. New Zealand crossbreds are accumulating. In the west there has been free buying during the past week at higher prices, and the manufacturers appear to have bid up the market on themselves, dealers and manufacturers in some cases being keen competitors. In Idaho and Oregon, where most of the buying has been done, 19@20 cents was paid, making the wool cost more laid down in Boston than similar wools of as good quality are selling for. Idaho wools are of very good quality, and bidding is active; sales in Oregon are well under way; Wyoming is well cleaned up along the line of the Union Pacific, but not in the northern part of the state. Texas and California are still quiet, and in the fleece sections asking prices are too high for dealers.

SOUTH CAROLINA'S PROGRESS.

Ex-Senator McLaurin, of South Carolina, while in New York, spoke of the progress which that state is making, especially the banking system, which has sprung up since 1885. Marlboro county, one of the finest cotton-growing counties in the state, at that time was without a bank, and practically all of the banking was done with Charleston, 150 miles distant. Now there are five banks in the county, one of which, with a capital of $59,000, has deposits ranging from $500,000 to $700,000. There are other instances in which banks are doing as well in various parts of the state. The people are putting their money into banks, mills, forest properties, better houses, furniture making, cotton-oil mills and such projects as ice plants and municipal improvements. One of the best opportunities in South Carolina towns is in a combination business in which ice making and the fuel trade are combined. Senator McLaurin laid emphasis upon the necessity of international banking connections through American institutions, by which it would be possible for the southern exporter of cotton products to reach the markets of the world more directly. He said that it is too much the practice to have to do business through London. We ought, he thought, to be able to finance our own foreign commerce. Speaking further of the leading industrial district of the Carolinas, where the cotton mills are, he said: "When it reaches its full stature, the Piedmont region of the Carolinas will dominate in cotton manufacturing just as surely as the southern cotton belt now dominates the world's raw products. We are to-day supplying our domestic needs and exporting on the average only $30,000,000 worth of cotton goods a year; while we are supplying Great Britain with enough raw cotton to meet her enormous home demands, and in addition enabling her to export nearly $500,000,000 worth of cotton goods annually. Besides this, we send to Germany, France and other countries enough raw material to allow them to outdistance us as exporters of finished wares. This Piedmont section has many advantages which must ultimately centralize cotton manufacturing within its borders—climate, agricultural products, raw cotton, and especially hydro-electrical developments now under construction."

FINANCIAL

Southern Pacific Company

TREASURER'S OFFICE
No. 120 Broadway

A. K. VAN DEVENTER,
Treasurer.

NEW YORK, May 9, 1907.

To the Stockholders of the Southern Pacific Company:

At a special meeting of the stockholders of the Southern Pacific Company, held July 20, 1904, the following resolutions were adopted:

"Resolved (1), that the capital stock of the Southern Pacific Company be increased one hundred million dollars, by issuing one million additional shares of the par value of one hundred dollars each."

"Resolved (2), that the said increased stock shall be preferred stock; that the holders of such preferred stock shall be entitled to dividends in each fiscal year at such rate, not exceeding seven per cent. per annum, payable semi-annually out of the net profits, as shall be declared by the Board of Directors, before any dividend shall be declared on the common stock; that such dividends shall be non-cumulative; that the holders of such preferred stock shall not, by virtue thereof, be entitled to any other or further share of the profits of the Company; that upon the dissolution of the Company, voluntarily or otherwise, the holders of preferred stock shall be entitled to have their shares redeemed at par before any distribution of any part of the assets of the Company shall be made to the holders of the common stock; that said preferred stock shall be issued and sold, from time to to time, such amounts and in such manner as the Board of Directors may authorize and determine, but at not less than the par value of the shares; that it shall be convertible into common stock, share for share, at the option of the holders at any time; and shall be redeemable, at the option of the Company, on or at any time after the first day of July, 1905, and before the first day of July, 1910, at one hundred and fifteen dollars per share."

"Resolved (3), that the Board of Directors shall be and they are hereby authorized to establish, from time to time, and enforce all such rules and regulations respecting the issue, sale, redemption, and conversion of such stock, not inconsistent herewith, as in the judgment of the Board may be necessary or expedient."

Thereupon, the Board of Directors offered to the stockholders for subscription on or before September 1, 1904, such preferred stock to the amount of $40,000,000 divided into 400,000 shares of $100 each, and of the stock thus offered there was subscribed and has been issued 395,633 shares of the aggregate par value of $39,563,300.

At a meeting this day held the Board of Directors resolved to issue 360,000 additional shares of the aggregate par value of $36,000,000 of such preferred stock and to offer to all stockholders of the Company, registered as such on its books at 12 o'clock M. on the 25th day of May, 1907, the right to subscribe to such preferred stock upon the following terms and conditions, viz.:

All shareholders shall be entitled to subscribe on or before the 15th day of June, 1907, and not thereafter, to such preferred stock at the rate of one hundred dollars per share, to the extent of 15 per cent. of their respective holdings as shown upon the stock books of the Company at the close of business on the 25th day of May, 1907, and for fractions of shares in like proportions.

Payments for said stock shall be made in three instalments, viz.:

Twenty-five per cent., or $25 per share, at the time of making the subscription.

Twenty-five per cent., or $25 per share, on or before the fifteenth day of July, 1907.

And the last instalment of fifty per cent., or $50 per share, on or before the fifteenth day of August, 1907.

Subscribers may pay their subscriptions in full at the time fixed for the payment of the first instalment, in which case full paid negotiable receipts will be issued. Interest at the rate of 5 per cent. per annum will be allowed on the advanced payments.

There will be mailed to each stockholder on or about June 1st, a warrant designating the amount of Preferred Stock to which such stockholder is entitled to subscribe.

The manner of arriving at the number of shares each stockholder is entitled to subscribe for is illustrated in the following table:

HOLDERS OF	ENTITLED TO SUBSCRIBE TO	INSTALMENTS PAYABLE. 25% June 15, 1907.	25% July 15, 1907.	50% Aug. 15, 1907.	Total Payments.
1 share	.15 of a share	$ 3 75	$ 3 75	$ 7 50	$ 15 00
2 shares	.30 of a share	7 50	7 50	15 00	30 00
3 shares	.45 of a share	11 25	11 25	22 50	45 00
4 shares	.60 of a share	15 00	15 00	30 00	60 00
5 shares	.75 of a share	18 75	18 75	37 50	75 00
6 shares	.90 of a share	22 50	22 50	45 00	90 00
7 shares	1 05 shares	26 25	26 25	52 50	105 00
8 shares	1.20 shares	30 00	30 00	60 00	120 00
9 shares	1.35 shares	33 75	33 75	67 50	135 00
10 shares	1 50 shares	37 50	37 50	75 00	150 00

On the back of these warrants are two forms; the first to be filled out and signed by the stockholders in case they desire to subscribe or by their assigns; the second form, which is an assignment, is to be filled out and signed by the stockholders only in case they desire to dispose of their privilege.

Stockholders who may wish to subscribe for a portion of the stock covered by a warrant and dispose of the balance, or who may wish to dispose of a portion of the stock covered by a warrant to one person and the balance to another, should return their warrants to this office **on or before June 14, 1907,** to be exchanged for other warrants, specifying in writing the number of warrants desired in exchange and the number of shares to be covered by each.

The warrants must be returned to this office by the stockholders or by the persons to whom assigned, by June 15, 1907, accompanied by the payment of the first instalment; and all warrants not so returned with such payment on or before said date shall be void and of no value.

The Treasurer will, on surrender of the warrants and payment of the first instalment, issue receipts which will be transferable by delivery and which must, unless previously paid in full, be returned by July 15, 1907, accompanied by the payment of the second instalment, for endorsement thereon of the payment of said second instalment, and again by August 15, 1907, accompanied by the payment of the third instalment.

FINANCIAL

All receipts must be surrendered at the Transfer Office of the Company, 120 Broadway, New York City, on or before August 20th, in order that full paid stock certificates, to be issued in exchange therefor, may be prepared for delivery on August 30th. Temporary receipts in the meantime will be given.

Stock certificates will not be issued except for full shares. Holders of warrants for fractional shares desiring to subscribe for a full share may do so by purchasing before June 15, other fractional warrants (if obtainable) in sufficient number to make a full share, or by subscribing for the fraction of a share to which their warrants entitle them and purchasing additional fractional receipts sufficient to make a full share. Fractional receipts purchased after July 15 and before August 15 must have the second instalment paid. Fractional receipts purchased after August 15th must be full paid.

Fractions desired by stockholders to complete full shares or fractions which stockholders desire to dispose of will not be sold or purchased by the Company.

Stock certificates will be issued on August 30th, in exchange for fractional stock receipts, when such fractional receipts make full shares, provided they are surrendered at the Transfer Office of the Company, 120 Broadway, New York, on or before August 20th. Temporary receipts in the meantime will be given.

No subscription or assignment of this privilege will be recognized unless made on the forms furnished by the Company.

No holder of Stock of the Company shall be entitled to any of such preferred stock unless the terms of subscription herein specified are fully complied with.

The subscription and respective instalment payments must be made at the dates and in accordance with the provisions stated above. Cheques or drafts in payment of subscriptions must be drawn in favor of the Southern Pacific Company, in New York funds, and for the exact amounts covering the respective instalments.

By order of the Board of Directors,

A. K. VAN DEVENTER, Treasurer.

ENTERED AT THE POST OFFICE AT NEW YORK, N. Y., AS SECOND-CLASS MATTER.

SATURDAY, JUNE 1, 1907.

President Roosevelt's discussion of the railroad question in his Memorial Day address at Indianapolis is noteworthy for the apparent effort made not to overlook and to give the country assurance that he has not disregarded any point of view in dealing with that very complex subject. He declares at the outset that there can be no swerving from the course that has been mapped out by the federal legislation and administration of the last six years, and by the messages in which he has asked for further legislation, and that there will be no halt in the forward movement toward a full development of the policy thus outlined. In the President's opinion, there should be vested in the federal government a full power of supervision over the railroads doing interstate business as regards the future issuance of stocks and bonds, and such supervision should involve frank publicity touching everything which intending investors and the general public have a right to know. It should further be declared contrary to public policy henceforth to allow railroads to devote their capital to anything but the transportation business, certainly not to the hazards of speculation, and provision should be made for the ascertainment by the Interstate Commerce Commission of the physical valuation of any railroad in the country, whenever and as soon as such valuation would, in the opinion of the commission, be of value to that body in its work. Mr. Roosevelt leans towards finding authority for federal regulation in the clause giving Congress authority to establish post roads, a view from which there is likely to be strong dissent when applied to mail-carrying roads not doing an interstate business.

The statements here summarized deal with one side of the question. In other passages Mr. Roosevelt says that he and those standing with him would be the first to protest against any form of confiscation of property, and that whether they protested or not the Supreme Court could be trusted in any event to see that there should be nothing done under the guise of regulating roads to destroy property without just compensation or without due process of law. There has been, Mr. Roosevelt says, much wild talk as to the extent of the overcapitalization of railroads. Instances of such, he says, there have been and are, yet when the aggregate statistics for all the roads are considered they will not be found to impair the financial standing and position of the railroads as a whole. In his view the evidence seems ample that the great mass of our railroad securities rest upon safe and solid foundations. It is, he urges, all essential that in the natural indignation over instances of corporate dishonesty in the past, people should not lose their heads and get drawn into an indiscriminate raid upon all corporations. The great need of the hour is that for better transportation facilities, and while there must be just and reasonable regulation of rates any arbitrary and unthinking effort to cut them down may be equivalent to putting a complete stop to the effort to provide better transportation. The development of the country, it is pointed out, can only be secured if investors are offered an ample reward for the risks they take. Mr. Roosevelt's latest address is one of which no part can be left unread if his position is to be thoroughly understood. He holds fast to the line of policy upon which he entered some time ago, but he gives assurance that none of the substantial and wide-reaching interests to be affected thereby have been left out of account in his plans.

Advices from Washington indicate that the provisions of the treaty of peace negotiated at Amapala recently have a wider scope than was at first supposed. The treaty, it may be recalled, was arranged between Nicaragua and Salvador to restore the friendly relations which had been disrupted by the participation of the latter in the conflict between Nicaragua and Honduras. The treaty provides for obligatory arbitration in case of trouble arising in the future, and for a peace congress to be held at Corinto, in Nicaragua, to which the five republics are invited to send delegates to frame a compact regulating commerce, navigation and any other questions that may be judged profitable to Central American interests. Relations between Mexico and Guatemala continue to be at a point of tension, though the diplomats in their public utterances minimize the prospects of a conflict. A large force of Mexican troops has gathered on the Guatemalan border, and the Guatemalans are reported to be intrenching on their side of the frontier.

It may be remembered that on July 12, 1898, President McKinley issued an order directing that upon the occupation of any forts and places in the Philippines by the forces of the United States, duties upon imports to the islands should be levied as a military contribution. The order, it will be seen, was issued during the war with Spain and some months before the treaty of peace was signed. The Supreme Court held in a case decided by it a little over two years ago that duties could not be collected upon goods shipped from New York to Manila after the date when the ratifications of the treaty were exchanged. Upon a rehearing a little over a year ago the court reaffirmed its decision. In an opinion rendered by it this week the court held that the action of Congress in ratifying the collection of duties on merchandise imported into the Philippines between the date of the signing of the treaty of peace and the enactment by Congress of the Philippine tariff act was valid, in spite of the fact that several years had passed since the importations. The Court of Claims decided in favor of some Manila merchants, subjects of the Emperor of Germany, who claimed a refund of duties on goods imported as above indicated, but the Supreme Court reversed that decision.

The quaint old town of Carcassonne was the scene on Sunday of what may be regarded as the culmination of a remarkable movement which has given the French government no little anxiety. Ordinarily the town has a population of about 30,000, but on Sunday no less than 200,000 persons are reported to have participated in the demonstration of wine growers demanding the enactment of measures directed against impure wines. For some time the people of the four departments bordering the Mediterranean and extending from the Rhone to the Pyrenees have been suffering distress owing to the decrease in the demand for pure wines from their district, which is largely dependent upon its vineyards for its prosperity. This falling off in demand has been coincident with an increase in the supply and the consumption of chemically prepared wines. Under the leadership of one Marcélin Albert, a small wine grower in a village of less than three hundred inhabitants, a movement began a short time ago which has now reached large proportions. Crowds of 100,000 or more have in several places testified to the earnestness and determination of the population. The French government has introduced a bill for the benefit of the yiticulturists which requires wine growers to declare the amount of their harvest, forbids the use of sugar for a second brew, imposes an extra tax on sugar for the first brew, and obliges purchasers of sugar to a quantity over fifty pounds to explain the purpose for which it is intended. This bill was declared inadequate by the assemblage at Carcassonne on Sunday. A noteworthy feature of the gatherings has been the general good order maintained. A government commission which has been investigating conditions in the wine districts of France and Algeria reported on Monday that the situation is most grave, and that unless remedial steps are promptly taken, conditions similar to those prevailing in the south will arise in the other wine-producing districts.

In an unbroken series of rulings the federal courts have sustained the action of the Interstate Commerce Commission in prohibiting railroads from advancing freight rates from the south to Ohio river points. The question was originally raised by a lumber firm in Georgia, which procured an order from the commission prohibiting the Southern Railway Company from collecting an advance of 2 cents per hundred on lumber shipped from that state to the Ohio river. The ground taken was that the augmented rate was "unreasonable and unjust." Upon an appeal from this ruling of the commission it was sustained by the United States Circuit Court for the Southern District of Georgia, and, upon a further appeal, by the Federal Circuit Court of Appeals for the Fifth Circuit. The decisions of those courts were affirmed by the Supreme Court of the United States on Monday, in the case of the Southern Railway Company vs. Tift et al. The case is regarded as a test suit for the reason that the advance prohibited was made by the southern roads generally, and they will be affected by the decision.

Although the indications are that the Consolidated Gas Company of New York will secure an initial advantage in its struggle against the 80-cent gas bill, it does not seem that the controversy is likely to be settled very speedily. Assuming that the court approves the master's findings, which are alleged to be in favor of the company, the case will then be carried to the United States Supreme Court, and fully a year will elapse before any final decision can be obtained. Meantime, other phases of the gas situation in New York City have been brought to the front and seem likely to result in further complications. The legal department of the city of New York has determined to press the question of whether the franchises under which a number of the constituent concerns of the Consolidated Gas combination are operating still have validity, or whether they did not, as a matter of law, expire long ago, and has instituted suits to that end.

FURTHER STOCK-MARKET DECLINES.

Proceedings in the New York stock market during the present week have to a certain extent duplicated those of its predecessor. Both this week and the one before have witnessed a restricted volume of trading and in their earlier portions were alike characterized by heavy selling, which to all appearances was of a liquidating kind, although it was helped along, of course, by the activity of the professional operators, who, under such circumstances, would naturally incline to work on the short side of the account. Following the selling movement, in each case there was more or less evidence that the short sellers, for the time being at least, overdid matters, and that the volume of outstanding bear contracts had become excessive, so that prices rallied from their previous depression. In the present instance the recovery was undoubtedly helped by the expectation of a conservative deliverance on the part of President Roosevelt and the view taken by the market of his treatment of railroad problems in his Indianapolis address on Memorial Day.

This week's market, however, again resulted in a number of instances of declines in quotations for active stocks to still lower figures than they had touched either in the severe break which occurred about March 15 or in the weak market of May 21 and 22. Not only was this the case, but one of the striking facts attending the movement was that certain very prominent stocks sold on last Monday and Tuesday at the lowest quotations they have touched for a number of years. In the case of Great Northern preferred, which during the bullish campaigns of the past two years was looked on as a tower of strength and as a leader in the upward movement of prices, this week's sales at 123 have no parallel since 1898, when the stock was quoted at 122. New York Central, which touched 109 on Tuesday, has not sold at a similar figure since 1898. It may be noted that in each of these cases the corporations whose stocks suffered such an enormous shrinkage have been among the prominent applicants for additional capital with which to provide for extensions or improvements on a large scale. Somewhat similar conditions, however, were observed in connection with a large portion of the active share list, including both industrial and railroad stocks, and, on an average, prices seem to have receded to about the same level which they held in 1904, prior to the inception of the so-called boom in the leading railroad issues.

As was the case with the market in the preceding week, there has been no little diversity of opinion in stock-market circles regarding the reasons for the continued weakness and liquidation. It cannot be said that Wall street has been any more successful in locating the source of the selling with accuracy. Various interests have been mentioned, and some little stress was laid upon a story that prominent Pittsburgh capitalists identified with the management of the United States Steel Corporation were getting out of their holdings of that and other securities. As was the case before, however, the most rational explanation seemed to be that unfavorable crop reports had most to do with the matter, and this view is certainly borne out by the fact that the rallying tendency in the latter part of the week was coincident with the receipt of much better crop news and weather reports from western territory. In a measure the early break was also helped by the news that gold shipments to Europe had actually set in, but, on the other hand, the later strength was in no small degree increased by the comparative indifference with which the New York loan market seemed to regard the announcement of further gold exports.

TWO-CENT FARE LEGISLATION.

The decision on the part of railroad managers in several of the states to test the constitutionality of the so-called 2-cent fare laws, following upon the enactment of such laws in some of the more important states, has drawn attention anew to certain bearings of this legislation now so widespread in the United States. In Pennsylvania steps have already been taken to test the constitutionality of the law recently enacted in that state. A bill in equity has been filed in the Court of Common Pleas in Philadelphia to enjoin the county authorities from demanding any penalties for violations of the law, which will go into effect on October 1. It is set forth in the bill that if the law be enforced the charters of several railroads will be substantially altered by the curtailment and restriction of their corporate rights in respect to charges for the transportation of passengers; that the revenue of the railroads from that class of traffic will be so reduced as to render the passenger business non-compensatory, and that a hardship and injustice to the stockholders will result. It is not without interest as bearing on the questions raised by this bill that the counsel for the Philadelphia county commissioners has given an opinion to the effect that the law is unconstitutional.

Advices from Chicago a few days ago indicated that some of the Illinois railroads favored beginning proceedings immediately to test the constitutionality of the 2-cent rate law signed by Governor Deneen on Monday. It is believed, however, that a majority of the companies, while believing the maximum rate fixed by the law to be unreasonable and confiscatory, will follow a policy involving less haste. The western railroad officials have devoted some time to discussing a revision of rates because of the 2-cent fare laws of Iowa and Minnesota. It seems to be their intention to test the validity of these laws in the courts, but, owing to the heavy penalties provided for violations, they appear to be in favor of making certain reductions in rates, which will be advanced later in case the laws should be declared unconstitutional.

One feature of the situation which is of no little interest has been brought to notice by the action of the Reading Railroad Company in deciding to increase the fares to all suburban points in the vicinity of Philadelphia about 40 per cent. On Saturday, when the new rates went into effect, there was as a result of the increases a notable decrease of suburban traffic on the Reading roads, while the trolley lines running to the suburbs were very heavily patronized. Efforts are being made to enlist public sympathy in favor of the commuters who are being affected by the change of rates, and meanwhile preparations are being made by the trolley companies to handle the expected large increase in business. In New York, where the railroads also have a large suburban traffic, it is understood that the railroads will not follow the tactics of the Reading, at least at present. The 2-cent fare bill has not yet become a law, and the railroads will probably do nothing at all until the question whether it will or will not go upon the statute book shall have been settled.

In New York the legislative situation is a little peculiar. Both houses of the legislature have passed the 2-cent fare law which was before them for some time, and that measure is now in the hands of the governor. What his attitude in relation to the measure is has not been disclosed. For all that appears, he might decide to veto it upon grounds arising from the consideration of the provisions of the bill itself. But it seems almost inevitable that his judgment upon a measure fixing a maximum rate of fare will be, to some extent at least, determined by reference to another measure, providing, among other things, for the regulation of rates by an administrative body, which has also been passed by both houses of the legislature. We refer to the so-called Public Utilities bill, whose enactment is known to be earnestly desired by the governor, and which is now before the legislature again after being declared unacceptable by Mayor McClellan, representthe city of New York. It would occasion no surprise if Governor Hughes should decide that the enactment of this measure would render such a law as that proposed in the 2-cent fare bill unnecessary, if not improper.

THE SECOND CONFERENCE AT THE HAGUE.

It is now a little over eight years since the first Peace Conference began its sessions at The Hague. There were one hundred delegates present, representing twenty-six countries, when the conference was opened on May 18, 1899. The meetings of the conference were held in the Orange Zaal, or ballroom, of the famous "House in the Wood," or summer palace of the Dutch royal family, which is situated about a mile from the city. The delegates with the secretaries and attachés occupied practically all the available space, and Mr. Holls, in his account of the conference, records the fact that there was no room either for spectators or for journalists except only a narrow gallery in the cupola, to which a very few invited guests were admitted on the opening and closing days of the conference.

This lack of space in the House in the Wood has led to a change in the arrangements for the reception of the delegates to the second conference, which will be opened on June 15, two weeks from to-day. Twenty countries not represented at the first conference are expected to send delegates to the second one, and the authorities of the Netherlands have decided to offer as the place of meeting the mediæval castle known as the "Hall of Knights," a building the construction of which was begun about the middle of the thirteenth century, but which has been renovated in the course of the last decade. The main hall of this castle has in recent years been used by the Queen for the ceremony of reading the address from the throne to the two chambers of the States-General, or Parliament, assembled in joint session. This hall will, it is thought, afford a sufficiently commodious meeting place for the delegates from the forty-six countries which are expected to send representatives to the second conference. In recognition of the fact that the first conference had been proposed by Russia, the delegates to that body elected as their presiding officer Baron de Staal, the ambassador of the Muscovite Empire at the court of St. James. Following that precedent, it is expected that the second conference, the invitations to which have been given by the Czar, will elect as president M. Nelidoff, the leader of the Russian delegation, who at the time of the first conference was serving as ambassador to Italy.

In one respect the second conference at The Hague will differ in a marked way from the first one, namely, in the increased representation of the countries in the western hemisphere. Only the United States and Mexico among the countries in that hemisphere were represented at the gathering of eight years ago. The Central and South American republics were included in the invitation to the second conference mainly, it is believed, owing to the suggestion of the State Department at Washington, and the same influence has been to no small degree instrumental in bringing about the general acceptance of the invitation by them. It goes without saying that the representatives from the new world will exercise no little influence upon the determinations of the conference in regard to questions touching which there may be any division among the delegates from the older nations, and that they are likely, at any rate, to secure a hearing for propositions upon which they are in substantial agreement.

One point upon which there seems to be a general agreement among the representatives from the western hemisphere is as to the desirability of action looking to a wider extension of the method of settling international disputes by arbitration. How far practical results may be looked for in this direction remains, of course, to be seen; the idea, at any rate, is not likely to lose in force through discussion. About the Drago doctrine there is, it appears, a lack of complete agreement among the Latin-American nations. The delegates from some of those countries will press that doctrine upon the attention of the conference, but, following the recommendation of the Pan-American Conference at Rio de Janeiro last year, each country will act individually in relation to the question. It is reported, for example, that such countries as Brazil and Chile are opposed to the doctrine, while the delegates from Cuba announced last week that they would earnestly urge the conference to declare against the collection of public debts by force. The United States government, it may be imagined, hopes to secure little more than an understanding setting limits beyond which the use of force in the collection of debts will not be permitted. It is gathered from the make-up of the Russian delegation to The Hague Conference that the Czar's representatives will not place any obstacles in the way of a discussion of the Drago doctrine before that body.

Upon the other questions before the conference, particularly that relating to disarmament, the representatives from the

Latin-American countries will probably be guided largely by the action of the United States. The disposition of the latter question will doubtless be determined by the attitude of Germany, Austria and Russia, and while the subject may be laid before the conference by Great Britain, no definite action will be taken, though there may be a discussion of the question in spite of the fact that no practical results are to be looked for. It may be noted that Italy, while adhering to the general reservations of Germany and Austria on the subject, is not averse to taking part in a discussion of it along the lines suggested by Great Britain, whose attitude, while believed to be agreeable to the United States, has not yet been definitely stated, and it is understood will not be announced until the meeting at The Hague. In any event there is no likelihood of friction arising over the question in the conference.

RENEWED GOLD EXPORTS.

Uncertainty as to the foreign exchange situation and the possibility of shipments of gold from New York to Paris was dispelled this week by the engagement of $800,000 of the yellow metal on last Monday, and of $2,000,000 more on Wednesday, which amounts, in both cases, were forwarded to the French capital. It has already been pointed out that such a movement was not at all unlikely to occur, in spite of the belief that if international bankers began to draw gold from New York, our own Treasury Department would hasten the withdrawal of government deposits from the national banks, and in this way place a check upon the ability of the foreign market to take gold from this country. In fact, the New York money market seemed to rest under the belief that there was no longer any real likelihood of gold withdrawals. Several circumstances, however, serve to demonstrate that this feeling was without justification. In the first place, foreign exchange rates at New York remain very firm, demand sterling being quoted at around 4.86.75, and, contrary to the usual experience in such cases, the announcement of the initial shipment of $800,000 gold, which was made on Monday, failed to cause any lowering of exchange rates. Another element in the situation was the increase in the New York bank reserve shown by the Clearing House statement of last Saturday, which document exhibited a gain of $5,800,000 in cash and a substantial enlargement of the surplus reserve. The accumulation of money in the New York banks seemed, in fact, to be in the nature of an invitation to Paris to draw gold from New York, or, to put it in another way, a tangible indication that London banks and bankers could at last with safety transfer to New York part of the burden which they are called upon to bear in regard to returning to Paris the gold which the British money market obtained from that source when it was in straits in the autumn and winter of last year. It should also be noted that French bankers were bidders for the new gold which arrived at London this week from South Africa and elsewhere, and succeeded in obtaining the equivalent of $4,000,000 thereof, the rate of exchange at Paris declining so that that market seems to have for the time being a command of the situation as regards both London and New York. Various theories are advanced as to why the Bank of France should exhibit a strong desire to increase its gold holdings. The prevalent theory, however, is that it is the Russian situation which occasions the adoption of an energetic policy in this respect. There are large payments of interest upon Russia's funded obligations which mature in June, and the situation in that country from a financial standpoint continues to be far from reassuring, even if there should be no positive break between the government and the people, such as would readily arise if the newly created Parliament were summarily dissolved.

It is to be noted, however, that the New York money market has, on the whole, taken these developments without any exhibition of positive apprehension or excitement. It is true that while the gold shipment announced on last Monday served to some extent as an excuse for a certain amount of demoralization in the stock market, the rates for both call and time loans remained steady, and the larger amount of specie, which was engaged on Wednesday, also failed to have any particular influence upon interest quotations. The latest advices from Washington, moreover, would seem to show that the Secretary of the Treasury, after a full review of the situation, has concluded that there was no inherent reason which would impel him to reduce the government deposits for the purpose of creating an advance in interest rates and thereby checking gold exports. According to some accounts, his position is that the national bank depositories have the remedy in their own hands, and can return government deposits at any time to an amount sufficient to create higher interest rates, should they find that such a course is prudent and advisable from a business standpoint. On the whole, it would seem that some further amounts of gold will go from New York to the French capital, but, judging from the actual effects of the transactions which have already taken place, there is little likelihood that they will occasion any serious hardening of the money market.

PROPORTIONS OF OUR MANUFACTURES EXPORTED.

It is well known that this country's exports of manufactured goods are increasing rapidly, this being true not only of the aggregate value thereof, but also of the proportions which these goods bear to all exports. It is not so generally known, however, that the ratio of gain in exports exceeds the percentage of increase in the amount manufactured year by year, as shown by the census reports. Facilities for determining even approximately the share exported of the manufactures produced in any given year have only become available within the past few months, through a new classification of exports and imports adopted by the Bureau of Statistics at the beginning of the present fiscal year. The census figures of manufactures produced include certain articles not classed by the Bureau of Statistics as manufactures, such as products of milling, slaughtering, canning, etc., and until the beginning of the present fiscal year no grouping had been made by the Bureau of Statistics by which its figures of exportation were comparable with the census figures of production of manufactures. To render the figures of production and exportation comparable, however, the Bureau of Statistics made at the beginning of the present fiscal year an entire readjustment of its schedules of exports and imports, placing in a single group, entitled "Foodstuffs partly or wholly manufactured," all articles in which the Bureau of Statistics and census classifications had disagreed in the past. By combining this group with the articles which both bureaus formerly classed as manufactures, the Bureau of Statistics is able to show in one great group the exportation of all articles classed by the census as manufactures, including foodstuffs wholly or partly manufactured, manufactures for use in manufacturing, and manufactures ready for consumption.

This new grouping, which offers a method of determining export or import values of all articles classed by the census as manufactures, has been applied to the export and import record of each year from 1821 to 1906, and it is thus practicable to compare, at each census year, the figures of production with those of exportation. The following table shows the census valuation of manufactures and the Bureau of Statistics' statement of the value of the domestic exports of the same class, and the ratio which the exports bear to the figures of production, in each census year from 1850 to date:

	Net value of product	*Value of exportations*	*Ratio exp. to product, per cent.*
1850	$679,000,000	$43,200,000	6.37
1860	1,237,000,000	87,100,000	6.93
1870	2,822,000,000	160,100,000	5.69
1880	3,580,000,000	315,200,000	8.80
1890	6,248,000,000	403,700,000	6.46
1900	8,371,000,000	803,000,000	9.59
1905	9,821,000,000	894,500,000	9.11

It might be mentioned that estimates of net value of the country's manufactures were not reported on previous to 1900, but for the earlier years the net value is placed at two-thirds of the gross product, and there is thus made possible a fairly accurate comparison of production and export in the earlier years, while the use of the net value prevents the duplication which exists in the item of gross product. Utilizing this estimate of the net value of manufactures at each census period from the earliest census of manufactures, 1850, down to date, the Bureau of Statistics finds that the export value of all articles which have undergone a process of manufacture equaled in 1850 6.4 per cent. of the estimated net value of manufactures produced; in 1860, 6.9 per cent.; in 1870, 5.7 per cent.; in 1880, 8.8 per cent.; in 1890, 6.5 per cent.; in 1900, 9.6 per cent., and in 1905, 9.1 per cent., thus indicating a fairly steady growth in the share of our domestic manufactures which pass out of the country to foreign markets.

THE ENGLISH COTTON INDUSTRY.

Manchester, May 15.—Lancashire continues to ship cotton cloth very largely, indeed, the April exports being again on a free scale. The following table speaks for itself, figures being in yards:

	1907	1906	1905
April	535,900,900	456,939,600	470,097,800
Four months ending April 30	2,153,527,900	2,095,958,300	2,000,837,900

The countries that are taking more this year than last are India, Turkey and Egypt. The takings by the United States for the past four months are 34,000,000 yards, against 31,000,000 in the corresponding period of last year, and 20,000,000 in the first four months of 1905. Canada, too, is taking more, namely, 28,000,000 yards, as compared with 22,000,000 and 17,000,000 yards in 1906 and 1905 respectively. A feature of interest is that there is a distinct increase in the takings of printed, dyed and bleached goods, while on the other hand there is a falling away of unbleached cloth. It is said here that the United States has recently bought very freely for distant delivery in special goods which cannot be produced fast enough in America.

Lancashire manufacturers at the moment are not doing much business in the way of new contracts. Dealers in India seem in no mood to give current rates. They have plenty of stuff by them and also large quantities yet to be delivered. A noteworthy feature this year has been the large takings of our cloth by Turkey and Egypt. Makers who use bought yarn are still handicapped by the high prices current for twist and weft. To buy yarn and sell cloth to-day means, in many cases, little more than change for a shilling. Already some producers are getting a little indifferent as to keeping their machinery at full stretch. It is rumored that in the Blackburn district there will be a longer stoppage this year for the Whitsuntide holidays, which commence this week. Home trade cloths are improving in demand, the distribution increasing in many special kinds. Colored woven goods, sateens and waste cloths are in good request.

Coming now to yarn, we find here, too, large shipments in April. Subjoined is the usual table, figures being in pounds:

	1907	1906	1905
April	19,271,900	17,159,700	15,834,600
Four mos. ending April 30	72,911,200	72,268,400	64,769,200

The continent has been buying largely this year. Our exports to Germany, Russia, Austria and Holland are very large indeed as compared with 1906, but there has been a falling off to Japan, India and Burmah, though on balance our exports for the past four months, as will be seen by the above table, are quite equal to the same four months of last year. Lancashire spinners of American yarn continue strong as to prices, though there has not been a large business done during the month under review. Twist continues scarce, and extreme rates are paid for early delivery. Producers enjoy a wide margin of profit. In shipping yarns, a good healthy tone prevails, especially for the continent. Yarns made from Egyptian cotton in the Bolton district have been somewhat irregular in price, and no large business has been entered. Combed yarn made from sea-island cotton is extensively engaged.

Just lately a number of spinning companies have taken stock for the last three and six months. The net profit declared after depreciation allowance shows a gain of 47 per cent. per annum on share capital. On all capital employed, allowing interest for loans, the rate is about 26 per cent. per annum. The dividends paid, however, average about 12½ per cent., the balance of profit being carried on to the reserve fund. Many concerns are accumulating large funds for distribution later on when times are not so good as at present.

Another spell of cotton spinning mill building has set in. Three or four new concerns, representing close upon half a million of spindles, are projected and are likely to go through. In a table of proposed mills issued recently there are 101

concerns, representing in the aggregate 9,082,000 spindles. The increase of new mills since the end of 1905 is thirty-six, containing 3,300,000 spindles.

The feeling is pretty general now in Lancashire that the American crop for this season will turn out to be about 13,500,000 bales. A little while ago some authorities thought the output would be 14,000,000 bales. There is a little concern as to the adverse reports recently received as to the new crop, but it is thought to be too soon to arrive at any definite judgment on the question. The Egyptian cotton supply question is considered favorable for next season, but here, too, it is rather early to say anything on the matter. T.

EDITORIAL NOTES.

George E. Roberts, Director of the Mint, figures that Nevada will produce about $15,000,000 worth of gold this year, as against an output of $10,000,000 in 1906 and $5,359,100 in 1905. Mr. Roberts is quoted as saying that the gold-mining industry of places like Goldfield, Tonopah and Rhyolite is only in its infancy. In 1906 the gold production of the United States amounted to about $96,000,000, against $88,180,700 in 1905, and it is thought that this year the output will be above $100,000,000, thanks chiefly to the prospective increase in Nevada's production. Director Roberts has prepared the following preliminary estimate of the production of gold and silver for the calendar year 1906:

	Gold, value		*Silver, fine ounces*	
	1905	1906	1905	1906
Alabama	$41,500	$35,900	300	....
Alaska	14,925,600	21,251,100	169,200	191,700
Arizona	2,691,300	3,223,800	2,605,700	2,747,800
California	19,197,100	18,633,900	1,082,000	1,564,500
Colorado	25,701,100	22,771,200	12,942,800	12,248,100
Georgia	94,800	64,200	900	1,000
Idaho	1,075,600	1,093,700	8,125,600	8,257,300
Michigan	....	....	253,000	286,800
Montana	4,899,300	4,585,800	13,454,700	11,478,700
Nevada	5,359,100	9,815,800	5,863,500	6,743,900
New Mexico	265,800	255,900	344,900	356,200
North Carolina	123,900	122,000	13,200	10,900
Oregon	1,244,900	1,369,900	88,900	100,100
South Carolina	95,100	74,600	....	....
South Dakota	6,913,900	6,822,700	179,000	157,500
Utah	5,140,900	5,172,200	10,319,800	11,538,000
Washington	370,000	352,600	119,400	140,500
Wyoming	23,700	26,400	2,700	1,300
Other states	17,100	429,100	526,000	360,200
Total	88,180,700	96,101,400	56,101,600	56,183,500

During the present week the news came from London that the state of Sao Paulo, Brazil, had negotiated a loan to the amount of $10,000,000 with London bankers, the security for which was understood to be a lease of one of the principal railroad properties belonging to the commonwealth. One of the stories in this connection was that the real purchaser of the bonds is the Dresdner Bank of Germany, and it was further stated that the purpose was to facilitate the carrying out of the valorization plan in connection with the Brazilian coffee crop. Adding this amount to previous loans made by the different Brazilian coffee-producing states, fully $95,000,000 of money has now been raised in pursuance of the plan to improve conditions in the market for Brazilian coffee, and it is also learned that there is now held as collateral against these operations about 7,500,000 bags of coffee, while other operations of the same character are understood to be under way. Under a law adopted by the Brazilian Federal Congress, the nation is to guarantee loans by the several coffee states to the extent of $75,000,000, and it is intimated that under these provisions further arrangements will probably be effected, involving considerable further additions to the Brazilian national debt for the purpose. It is to be noted, however, that in spite of the large amount of coffee which has been taken off the market, the price of the raw berry in the primary markets has not been enhanced to any great extent. Prices have, indeed, gone lower since the plan was first put in force, and the undertaking continues to be the object of criticism on the part of bankers and economic authorities, notwithstanding the general enthusiasm with which it is regarded in Brazil and the support which its execution has received from bankers and merchants interested in the coffee trade, both in Europe and America.

A rat will consume two ounces of wheat, corn or other grain a day, and costs 50 cents a year to maintain, leaving out the question of the vastly large quantity of material it destroys in its hunt for food. Statistics as to the cost to this country of this pest yearly have never been compiled, but it is noted that Denmark places its rat maintenance fund at $3,000,000 yearly, that of France is figured at $40,000,000, and if there be allowed only one rat to each cow, horse, sheep and hog in this country, a total value of cereals consumed alone is not far from $100,000,000. This is a great tax on the agricultural community, and the "farmers' friend," the Department of Agriculture, has therefore determined to take the matter in hand and find a way of checking the rodents' ravages. The substance and results of the investigation made have been given to the public this week in the shape of Farmers' Bulletin 297, entitled "Methods of Destroying Rats." From it we learn that all rats have been immigrants to this country. The black rat was the first to arrive, he coming some 300 years ago. The common brown or Norway rat came here about the time that our war of independence began, or in 1775. It drove out and supplanted the first arrival. In addition there is the Egyptian rat, which is a great sailor and infests ships, docks and other maritime property.

Naturally the rat, while a lover of the cereals, is not opposed to other foods, and the damage it can do on occasion to other property is beyond calculation. Rats destroy textiles, leather goods and furniture, gnaw lead pipes and eat electric insulation. Of $15,000,000 fire loss credited yearly to defective insulation, a large part is asserted to be primarily due to rat damage. In addition they destroy eggs, poultry, song birds, and have been known to kill rabbits, pigs and lambs. It has been stated that elephants have a deadly fear of rats and mice, which may be explained by the fact that they have been known to gnaw the feet of young elephants and cause incurable wounds. They also spread disease, the bubonic plague, for instance, having been carried from port to port by this nimble enemy of man. They are very prolific, breeding three to six times a year and having ten to fourteen in a litter. As the female breeds at the age of three months, it is calculated that one pair of rats' progeny might, death losses excepted, amount to 20,000,000 in three years. Naturally this rat question is a subject of interest to others than farmers, and the methods proposed for checking the pest are dealt with in great detail. Particular emphasis is laid by the bulletin, which is being furnished free by the Agricultural Department, on the necessity of rat-proof construction of buildings, and of the need of organized coöperation in destroying the most destructive rodent known to man.

The Bureau of Statistics this week published its detailed report of exports and imports for April and the ten months of the present fiscal year, these statistics comparing with the corresponding figures a year ago as follows:

Exports—	1907	1906	*Increase*
Food and animals	$13,659,742	$13,770,221	*$110,479
Food partly prepared	28,031,915	28,199,706	*167,791
Raw materials	44,615,629	38,691,927	5,923,702
Partly manufactured	22,681,453	19,443,958	3,237,495
Manufactures	45,201,876	40,589,137	4,612,739
Miscellaneous	1,104,127	1,251,434	*147,307
Total domestic	155,294,742	141,946,383	13,348,359
Foreign mdse exp	2,149,539	2,433,657	*284,118
Total exports	157,444,281	144,380,040	13,064,241
Imports—			
Food and animals	14,475,798	8,544,432	5,931,366
Food partly prepared	15,688,378	14,048,555	1,639,823
Raw materials	46,208,037	41,157,156	5,051,481
Partly manufactured	23,476,930	18,810,834	4,666,096
Manufactures	28,966,429	24,205,423	4,761,006
Miscellaneous	737,903	551,681	186,222
Total imports	129,554,076	107,318,081	22,235,994

* Decrease.

For the ten completed months of the fiscal year comparison of exports and imports is as follows:

Exports—	1907	1906	*Increase*
Food and animals	$140,493,914	$158,574,113	*$18,080,199
F'd partly prepared	287,610,553	294,546,844	*6,936,291
Raw materials	542,520,911	446,012,207	96,508,704
Partly manufactured	214,322,749	184,482,087	29,840,662
Manufactures	397,127,671	377,974,240	19,153,431
Miscellaneous	5,842,879	5,235,619	607,260
Total domestic	1,587,918,677	1,466,825,110	121,093,567
Foreign mdse exp	20,426,003	21,457,020	*1,031,017
Total exports	1,608,344,680	1,488,282,130	120,162,550
Imports—			
Food and animals	126,449,411	114,372,951	12,076,460
F'd partly prepared	126,318,644	115,933,520	10,385,124
Raw materials	401,310,942	345,013,144	56,297,798
Partly manufactured	227,945,840	178,052,977	49,892,863
Manufactures	303,678,867	259,118,881	44,560,086
Miscellaneous	9,695,572	8,381,705	1,313,867
Total imports	1,195,399,276	1,020,873,178	174,826,098

* Decrease.

The notable features in the export section are the continued decline in our shipments of food products, one time the main reliance in our export trade, and the increases shown in the exports of crude raw materials, mostly cotton, and of manufactured products. Fractional declines were shown for April in both crude and partly prepared foods, while crude raw materials gained 15 per cent., and exports of wholly or partly manufactured goods gained 13 per cent. over the same month a year ago. Very much the same tendencies are shown in the ten months' exports. In imports, it will be noted, every branch of trade shows gains both for April and for the ten months, which is significant of the expansion in our takings of foreign goods which has occurred in the past few years.

It has been pointed out that the American stock markets are not singular in respect to exhibiting very serious declines in the values of investment and speculative securities. The same thing exists in the foreign share markets. For instance, at London, what are termed "home" securities, including consols, are now quoted at what would have been regarded only a few years ago as ridiculously low figures. In fact, a good many high-class British investment bonds and stocks are now quoted at the lowest level which they have touched in many years. These facts are exhibited in the following tabulation which recently appeared in the New York *Evening Post*, and which compares the highest quotations for leading British railway stocks in the past sixteen years with the lowest quotations for the same, the present price, and the decline which the latter figures represent from the high range:

	Highest in 16 years	*Lowest in 16 years*	*Present price*	*Fall from highest*
Brighton deferred	186¼	91	91	95¼
Chatham ordinary	28¾	12⅞	13	15¾
Great Eastern	138	69¾	69¾	68¼
Great Northern deferred	86½	33	38	48½
Great Western ordinary	187¼	122	122	65¼
Lancashire & Yorkshire	156	87½	90½	56½
London & N. Western	210	142½	144¼	65¾
Midland deferred	98½	50¼	61¼	37¼
Metropolitan	137	41¼	43	94
North Eastern	185	131½	135¼	49¾
South Eastern deferred	120	38¼	38¼	81¾
South Western deferred	98¾	42½	46	52¾

The causes which have contributed to bring about such a demoralization in the market for such prime securities as the stocks of English railways—"home rails," as they are called—are various, heavy taxation, together with increased wages and labor difficulties, actual and prospective, playing a large part therein. At the same time the unsettled conditions in the American market and the prospective issue of further large amounts of securities by our railways are suggested by some of the leading financial authorities abroad as having far from an unimportant share in causing the marked decline in quotations for what the British public had long been accustomed to regard as among the safest and most staple of its investment stocks, American stocks or bonds paying higher rates of interest being a bear feature in the demand for British securities.

In spite of the difficulty which companies operating or constructing electric traction lines experience, in common with the steam railroad systems of the country, in raising fresh capital, there seems to be no cessation of the demand for electrical appliances. In fact, the organizations which manufacture machinery and appliances for electrical installations continue to have an abundance of orders. Point is given to this by the recent announcement on the part of the General Electric Company of an issue of $13,000,000 of debenture bonds bearing 5 per cent. interest, convertible after 1911 into the company's stock, the present shareholders being invited to subscribe for the bonds at par to the extent of 20 per cent. of their present holdings. The proceeds of this issue, it is stated, will be used for additional working capital, it having been found necessary for the company to provide in a large way for the credits which its customers, the electric-light and trolley companies, necessarily require during their initial stages. At the same time a new field has been opened up for electrical power and apparatus in the growing use of such power in connection with large manufacturing establishments. A notable instance of this is afforded by the recent placing with the Allis-Chalmers Company of an order for some $5,000,000 of electrical equipment by the United States Steel Corporation. The greater part of this, it is understood, will be put in use at the new plant of the Indiana Steel Company, at Gary, Ind., but at the same time the other large plants of the Steel combination are, it is understood, to be equipped with electrical power to a much greater extent than in the past.

RECENT LEGAL DECISIONS.

[*Prepared for* BRADSTREET'S.]

Stock—Trustee—Taxation—Exemption.

Stock in a foreign corporation in the hands of a trustee belonging to its cestui que trust is not exempt from taxation in Kentucky under section 4088 of the statutes of that state, according to the decision of the Court of Appeals of the state in the case of The Commonwealth of Kentucky vs Lovell Jr.'s Trustee.

Garnishment—Wages—Injunction.

The Supreme Court of Mississippi, in Sturges vs. Jackson, denied the right to an injunction to prevent the garnishment of a laborer's wages, although they were by statute exempt from garnishment, and a rule of the employer provided that employees whose wages were garnisheed would be discharged.

Limitations—Contract—Place of Suit.

The Supreme Court of Georgia held, in the case of Thomas vs. Clarkson, that where a contract made and intended to be performed in another state is attempted to be enforced by suit thereon in the courts of Georgia, the statute of limitations of that state will be applied rather than that of the other state.

Negligence—Falling Trolley Pole.

The Supreme Court of Ohio held, in the case of Cincinnati Traction Company vs. Holzenkamp, that proof of the falling of a trolley pole from an electric car when it stopped at a usual stopping place, upon a person standing there for the purpose of getting upon the car, raised a presumption of negligence on the part of the traction company.

Employers' Liability—Indiana Law.

The Supreme Court of Indiana held, in the case of The Pittsburgh, Cincinnati, Chicago & St. Louis Railway Company vs. Rogers, that the constitutionality of the employers' liability act as applied to railroads, both under the state constitution and under the Fourteenth Amendment to the Constitution of the United States, must be regarded as settled and not open to question.

Insurance—Beneficiary—Wife—Statement.

The New York Court of Appeals held, in the case of Gaines vs. The Fidelity & Casualty Company of New York, that a statement in a policy of life insurance which the insured warranted to be true, that the payee named therein was his wife, was to be deemed material to the contract of insurance, and that if it turned out upon his death that she was not his wife, the contract was avoided.

Evidence—Notes—Payment—Loans.

The New York Court of Appeals held, in the case of Dick vs. Marvin, that when the plaintiff by cross-examination of the defendant had endeavored to show that the latter was not possessed of sufficient means to pay certain notes at the time payment was alleged to have been made, the defendant might call other witnesses and prove by them that they had loaned money to her during that time.

Collatera Inheritance Tax—Estate.

In the case of Fisher Surviving Trustee vs. The State of Maryland, decided recently by the Court of Appeals of that state, the question was raised whether the collateral inheritance tax imposed by the state should be laid upon the value of the estate as of the death of the testator from whom the estate came or upon the increased value thereof at the death of the testator's widow. The court held that the tax should be collected upon the increased value of the estate, the collateral inheritance tax being imposed upon the clear value of the estate at the time the beneficiary receives a bequest under a will.

Railroad—Negligence—Piston Rod.

In the case of Cederberg, Administratrix, vs. Minneapolis, St. Paul & Sault Ste. Marie Railway Company, it appeared from the evidence that the crosshead and piston rod of a railway engine are so constructed and fastened that it is not possible by the exercise of ordinary care to discover incipient fractures forming in the concealed portions of the rod without detaching the parts. An injury being occasioned by the breaking of a piston rod within a crosshead, the court held that no presumption of negligence arose with respect to the sufficiency of the rod by reason of the mere occurrence of the accident, and that the rule of res ipsa loquitur did not apply. The court held further that it was a question of fact whether a railroad company exercised ordinary care in the examination and repair of its engines by inspecting the concealed portions of the piston rods upon those occasions only when the engine was being generally overhauled or when some external defect in the rod was discovered, and that the trial court did not err in charging the jury that it should consider the custom and practice of other railroads in reference to the inspection and repair of engines.

Labor—Wages—Lien—Priority.

The Supreme Court of Illinois held, in the case of Seymour vs. Berg, that the act to protect employees and laborers in their claims for wages does not create an express statutory lien superior to all other liens without reference to priority that might exist against the property of the failing debtor, but merely gives a preference to claims for labor or services, which is quite a different matter from creating a statutory lien upon all of the debtor's property.

Interstate Commerce—State Lien.

The Supreme Court of the United States held, in the case of The Iroquois Transportation Company vs. De Lancy Forge & Iron Company, that the enforcement of a lien given by a state statute upon a vessel for materials furnished after she was launched was within the jurisdiction of a state court where such materials were really furnished for the completing of the vessel and were fairly a part of their original construction, and that the exclusive control over interstate commerce vested in Congress by the Federal Constitution was not infringed by the enforcement against a vessel engaged in interstate commerce of a lien given by a state statute for materials furnished for her construction.

Contract—Hiring—Owner's Liability.

The Supreme Court of Pennsylvania held, in the case of McColligan vs. Pennsylvania Railroad Company, that a contract for the hiring for a certain time, at a certain price, of a team and carriage, which by its terms was one of bailment, was not converted into a contract of service so as to render the owner liable for the acts of the hirer, by the facts that the contract provided for the rates to be charged upon subletting the outfit, limited the territory in which it might be used and the kind of work which could be done, and that the owner employed an agent to supervise that branch of his business, secure men to undertake the work, make contracts with them and enforce the terms thereof which might be done by cancellation of the contract.

Corporation—Contract—Agents—Adoption.

The case of Bond vs. Pike et al., recently decided by the Supreme Court of Minnesota, arose out of an action by the assignee of a corporation to recover from the defendants a sum of money alleged to have been withdrawn from the funds of the corporation and converted to their own use. The court held that while a corporation is not bound by engagements on its behalf made by its promoters, yet it may make them its contracts by adopting them, and that if a similar contract might be made by the corporation without any formal act of its board of directors, the adoption of the contract by its promoters might be shown either by express act of its board of directors, or it might be inferred from acts or acquiescence of the corporation or of its authorized agents.

Debtor—Homestead—Exemption.

The Kentucky Court of Appeals held, in the recent case of Nicholson's Trustee vs. Nicholson et al., that it is not fraudulent for a debtor to dispose of money or property that cannot be subjected to the payment of his debts, but that a debtor has a right to invest in a homestead the money he is entitled to hold under the exemption laws. Under section 1697 of the Kentucky statutes there is exempt to a housekeeper with a family provisions, including breadstuffs and animal food, to sustain the family for one year; if not on hand, other personal property, wages, money or growing crop, not to exceed $40 in value for each member of the family. In the case before it the court held that where a housekeeper with a wife and eight infant children paid on the purchase price of land $100 in 1901, $100 in 1902 and $200 in 1903, during each of which years he did not have on hand sufficient provisions, including breadstuffs and animal food, to sustain his family for one year, the $400 he paid on the land during the three years being exempt from his debts, the land in which the exempted money was invested could not be subjected by his creditors to the payment of their debt.

BUSINESS NOTES.

Travel and Immigration.

The following statement, showing the yearly immigration and the yearly departures of American tourists since 1893, with the exception of the years 1896 and 1897, for which no records are available, is taken from the *Wall Street Journal*:

	Cabin pas'ng'rs departing	*Non-immigrant aliens arriving*	*Im'g'nts arriving*	*Emigrants departing*
1893	95,129	40,750	502,917	135,495
1894	121,931	32,940	314,467	190,840
1895	112,893	21,201	279,948	216,665
1898	94,554	21,062	229,299	130,857
1899	128,247	22,885	311,715	127,761
1900	155,895	25,429	488,572	137,499
1901	148,564	30,057	487,918	158,160
1902	158,112	30,092	648,743	168,648
1903	168,684	28,119	857,046	206,517
1904	184,613	27,844	812,870	323,591
1905	201,208	40,889	1,026,499	334,943
1906	214,669	65,618	1,100,735	282,068

Pittsburgh's Industrial District.

The Pittsburgh district comprises a radius of forty miles, with Pittsburgh as the center. Within that radius, according to statistics compiled by J. A. Lord, recently statistician of the Pittsburgh Chamber of Commerce, the railroads employed 3,500,000 cars in 1906 in the freight traffic brought in and shipped out, not including freight in transit, nor by water. The volume of rail business is estimated at 113,000,000 net tons. This, together with harbor freight of 9,000,000 net tons, consisting mainly of coal, gives the Pittsburgh district a grand total of 122,000,000 net tons of traffic. Coal alone in 1906 contributed 46,000,000 tons, which is equal to the production of Russia and Belgium combined, and exceeds that of either France or Austria-Hungary. In iron and steel production the Pittsburgh district contributes not far from one-sixth of the world's entire output of nearly 42,000,000 tons. This area exceeds in gross tons of iron and steel products the entire production of Great Britain, the totals being about 7,000,000 tons for Pittsburgh territory and approximately 6,000,000 tons for Great Britain. In pig-iron production, Pittsburgh and surroundings make half as much as the whole of the German empire, and about 25 per cent. of the total production of the United States.

The Electrical Industry.

The Census Bureau reports that in 1905 there were 784 establishments engaged primarily in the manufacture of electrical machinery, apparatus and supplies. Their capital was $174,066,026; the average number of wage earners employed, 60,466, and their wages, $31,841,521; the cost of materials used, $66,836,926, and the value of products, $140,809,369. In addition to the products reported by these establishments there was an output of electrical machinery and supplies valued at $18,742,033, from 128 establishments engaged primarily in other lines of manufacture. The total value of dynamos and motors, which constitute the largest single class of electrical apparatus manufactured in the census year, was $33,454,860. A slight increase in the value of all dynamos (from $10,472,576 in 1900 to $11,084,234 in 1905) was associated with a very large increase in number (from 10,527 to 15,080) and in capacity (from 770,832 horse power to 1,328,243 horse power). It is obvious that a relatively small increase in the average size of machines was accompanied by a large decrease in the cost per horse power to the purchaser. The total value of telephonic apparatus manufactured, as reported at the census of 1905, was $15,863,698, as compared with $10,512,412 for the census of 1900. Illinois is the great center of telephonic manufacturing industry in the United States, both as to number of factories and as to output. More than half the total product, or $8,357,521, was from that state. The output of New York was also large, but not quite half that of Illinois.

When the Lumber Famine Comes.

The *Iron Trade Review* says that "the cause of the profligate waste of the American forests is found in the cupidity of private lumbering interests with eyes only for present profits and none for future welfare, but this is of little concern except as suggesting action for the preservation of the timber still standing. The more important fact is that the maximum yield of forest products has been reached, that the output is hereafter to decrease, and that consumers of wood will shortly be driven by reason of its scarcity and increasing cost to find and adopt satisfactory substitutes. There is a growing sentiment for intelligent forestry, fostered particularly by certain leading universities, which will doubtless serve to prolong the approach of famine conditions, and extensive tree-planting by railway interests will lessen the perplexities of the cross-tie situation for a time, but none of these efforts is extensive enough to promise any adequate measure of relief. In the building operations of the future concrete will play its important part in all the more extensive undertakings in connection with the strength-giving steel bar. Tile and other clay products are to find more general use. The steel cross-tie, despite occasional setbacks, is well on its way to widespread adoption, and the wooden railway car will soon be a relic of an experimental past. Steel is already in wide favor for walls, as metal lath and ceilings. Substitutes for wood are being found on every hand, for the most part in some form of steel which is commended by the increasing ease and cheapness by which it can be turned into any finished form desired."

Railways Above the Fiftieth Parallel.

According to the *Railway Age*, "transcontinental railway projecting has not ceased, but the routes are developing northward of the United States boundary. The Port Simpson & Eastern Railway Company proposes to build a Canadian line from Fort Churchill, on Hudson bay, east to Port Simpson, on the Pacific coast, an estimated distance of 1,450 miles. Fort Churchill, on the extreme eastern shore of the great inland sea of the north, is about in latitude 59, nearly 700 miles north of Winnipeg and some 300 miles farther north than any point to the west on the line of the Grand Trunk Pacific. But it is some 1,200 miles inland from the Atlantic, over the waters of Hudson strait and bay, and between Fort Churchill and the Pacific the land barrier is narrowest. From Great Britain to Asia all the rest of the journey would be by water, so that of the 9,250 miles between Liverpool and Yokohama by this route, only 1,450 miles would be overland. Compared with the route by New York and San Francisco, with its 3,200 miles or so of rail journey, it is possible to save a distance of over 2,500 miles. Of course an apparent drawback to this showing is the fact that Hudson bay and strait are closed by ice for months each year, and are not considered inviting to commerce in any portion of the year. But the advocates of the enterprise assert that the bay is open for seven months, and that as for the rail route much of the northwestern country is warm and fertile, capable of producing great wheat crops, while other portions are rich in minerals. The project looks impracticable at this distance, but who will pronounce it impossible in these times of wonders? To-day Americans are building railways in Alaska, 600 miles north of Fort Churchill, and are talking seriously of connecting our continent with Asia upon the Arctic circle. A vast railway mileage is developing above the fiftieth parallel."

Anglo-American Trade Balance.

The London *Economist*, after discussing the principal factors in trade and finance between the United States and Great Britain, sets them out in the form of a balance sheet as follows:

DEBITS.	
Imports of products of the United States	£131,105,000
Imports of specie from the United States	14,962,000
Estimated value of American railroad shares purchased on balance during the year	8,000,000
Total	154,067,000
CREDITS.	
Exp'ts of British manufactures and products	£27,789,000
Exports of specie (gold) to United States	14,188,000
Estimated amount of dividends and interest due to British investors in respect of their investments in American securities	25,000,000
Estimated earnings of British shipping, insurance, banking, financial, etc., companies and miscellaneous receipts	25,000,000
Total	91,977,000
Less estimated amount of remittances on account of San Francisco disaster	5,000,000
Total	86,977,000

"It will be seen from the foregoing figures that the net adverse balance of our trade with the United States during 1906 may be estimated at about £67,000,000. Of course, many of the factors are mere estimates, and many important details may be omitted or inaccurately stated, but perhaps it may, on the whole, be said that the above balance sheet contains as fair a representation of Anglo-American business relations during 1906 as it is possible to derive from the available data. How, it may be asked, was the debit balance of £67,000,000 discharged? It is impossible to answer this question in any terms of exactitude. Undoubtedly the balance was met by the imports into America of the products and manufactures of countries indebted to Great Britain. For example, by the imports of coffee and rubber from Brazil; wool and gold from Australia; silk from Japan; tea from China and India; nitrate from Chile; silver from Mexico, and a whole host of other smaller imports from our debtors in other parts of the world."

CURRENT BUSINESS NEWS.

Commercial.

Canadian statistics give the increase of trade of the Dominion for the nine months ended March 31, 1907, as being $55,018,726, of which $47,506,476 were imports and $7,502,250 exports. This is an increase in the total trade of nearly 15 per cent. over the corresponding period of 1905-06. The aggregate trade for the nine months was $441,815,646, of which imports amounted to $249,717,413 and exports $192,098,232. The imports during March totaled $35,876,595 and the exports $15,304,236, an increase of $10,987,787 in imports and $1,838,871 in exports over the corresponding month of 1906.

The following is an abstract of French foreign trade in the first four months of the years 1907 and 1906:

Imports	1907	1906
Food	F323,286,000	F245,543,000
Raw materials	1,451,073,000	1,387,482,000
Manufactures	368,755,000	325,088,000
Total	2,152,414,000	1,957,613,000

Increase in 1907, 194,801,000 francs = £7,792,040.

Exports	1907	1906
Food	F205,902,000	F194,357,000
Raw materials	542,098,000	468,820,000
Manufactures	995,020,000	869,102,000
Post parcels	140,989,000	140,358,000
Total	1,854,009,000	1,672,637,000

Increase in 1907, 181,372,000 francs = £7,254,880.

Post parcels comprised 13,781,000 francs of silk wares, as against 11,731,000 francs in 1906.

The weekly summary of weather conditions issued by the Weather Bureau Tuesday says: "In the northern district, eastward of the Rocky mountains, and especially in the lake region, upper Ohio valley, northern part of the middle Atlantic states and New England, the weather during the week ending May 27 was unseasonably cold and unfavorable. Freezing temperatures occurred in the middle and northern Rocky mountain regions, and from the upper Missouri valley eastward to northern New England and in the higher portion of the middle Atlantic states, and injurious frosts in the central valleys and as far south as western North Carolina. In the southern states generally favorable temperatures prevailed, but the central gulf district suffered from excessive rains. Unusually heavy rains occurred in the upper Missouri valley and northern Rocky mountain region. There was a heavy fall of snow in Wyoming and northern Utah on May 24. In the lower Missouri, central Mississippi and lower Ohio valleys, and in the south Atlantic and east gulf states, there was abundant sunshine, but generally cloudy weather prevailed in the lower lake region and in the upper Missouri valley. Generally favorable weather conditions prevailed on the Pacific coast, with less than average sunshine in Oregon and California."

Foreign crop conditions as published Tuesday in Broomhall's Liverpool *Corn Trade News*: United Kingdom — There is some apprehension expressed regarding the outlook for the crop, as the weather is unseasonably cold. France—The outlook, on the whole, is good, although the crop is backward as a result of unseasonable weather. Germany — The weather is very variable. There are some claims made of further impairment to the crops, while others report improvement, especially for rye. Reserves of native grain are the smallest on record. Hungary—There are continued complaints heard as a result of the hot weather, with prospects poor. Roumania—Reports confirm good local showers, although more rain is needed. The weather is now unsettled. Official reports state that the damage has been exaggerated, while unofficial reports state that the damage has been 50 per cent. Bulgaria, Turkey—The outlook for the crops is bad. Russia—There is nothing new regarding the outlook for the crops in the southern belt. In the east some improvement is noted. Italy and North Africa—The crop outlook, on the whole, is favorable. Spain — The crop outlook is favorable, although rain is wanted.

The Liverpool *Journal of Commerce* announces that the Australian government will guarantee debentures to the amount of $6,250,000 in the projected mail-shipping syndicate, the fleet to comprise twelve vessels of 11,000 tons, with a speed of fifteen and a half knots, and will also give an annual subsidy of $625,000.

Exports of typewriting machines and parts to Mexico for the first nine months ending March, 1907, were valued at $284,186, and for March $38,333, out of a total for all countries of $601,499 for March, and for nine months to all countries of $4,544,091.

King's circular says the majority do not realize that Europe raises over half the wheat crop of the world. United States raises more than any other country, but less than half as much as Europe. Germany and southeastern Europe are complaining. Roumania talks half crop and of prohibiting exports. They had 114,000,000 wheat last year, but generally raise nearer 80,000,000, and about that much corn, most of which they export. Bulgaria averages less than 50,000,000, but Hungary had 197,000,000 last year and averages 160,000,000 bushels. Russia proper last year had only 358,000,000, but 520,000,000 two years ago.

Interest begins to center in the report of the Department of Agriculture, due on June 3 or 4, on the acreage and condition of cotton as of May 25. Correspondents have been requested to base their opinion upon inquiries as well as upon observation. There will be no change in the form of reporting the estimate of acreage, which is that of a percentage of last year's acreage. Acreage is to include not only what has already been planted, but also that which is yet to be planted this year. The report covering June will deal with conditions only.

This table, taken from the "Statistical Abstract" of the United States, gives an idea of how our import and export trade has been transported:

	In foreign ships	*In American ships*
1860	$255,000,000	$507,000,000
1870	639,000,000	353,000,000
1880	1,224,000,000	258,000,000
1890	1,371,000,000	202,000,000
1900	1,894,000,000	195,000,000
1901	1,974,000,000	177,000,000
1902	1,919,000,000	185,000,000
1903	2,026,000,000	214,000,000
1904	2,001,000,000	229,000,000
1905	2,103,000,000	290,000,000
1906	2,367,000,000	322,000,000

A new commercial agreement between the United States and the Netherlands has been practically concluded.

The value of the manufactures of the United States in 1905 was practically fifteen times as great as that shown in 1850, while the value of the exports of the same class of articles in 1905 was twenty-four times that in 1850. Articles which have undergone a process of manufacture increased twenty-three-fold during the period from 1850 to 1905, while those exported in a crude state increased less than seven-fold.

This table, taken from the *Western Tobacco Journal*, shows the output of manufactured tobacco in the months named:

	April, 1907	*March*, 1907	*April*, 1906
Tobacco, pounds	30,733,321	32,746,574	27,730,752
Cigars, number	618,354,243	600,110,307	545,480,850
Small cigars	106,243,888	112,414,408	72,737,500
Small cigarettes—			
At $1.08	330,995,444	388,169,250	255,551,759
At 54 cents	81,135,129	81,986,814	54,579,000
Total	412,130,573	470,156,064	310,130,759
Large cigarettes	1,443,150	1,215,540	943,250
Total cigarettes	413,573,723	471,371,604	311,074,009
Snuff, pounds	1,964,168	2,277,270	2,062,422

A Cleveland dispatch says that in order to move the 40,000,000 tons of ore scheduled for this season on the Great Lakes, the shipments during the remainder of the season will have to approximate 6,000,000 tons for each month. Compared with last year there has been a slight decrease in this traffic thus far, owing to the cold weather and late opening of navigation.

Iron and steel exports from the United States in the fiscal year which ends with next month will aggregate approximately 175 million dollars in value, against 57 millions a decade earlier and 16 millions two decades earlier. Figures issued by the Bureau of Statistics of the Department of Commerce and Labor show the value of iron and steel manufactures exported in the ten months ending with April, 1907, at about 150 million dollars, and these figures seem to justify the estimate of 175 million dollars, speaking in round terms, as the value of iron and steel exports for the fiscal year 1907. In the fiscal year 1897 the total value of iron and steel manufactures exported was only 57 million dollars, and in 1887, a decade earlier, the total was a little less than 16 million dollars.

Sir Wilfrid Laurier, now in Paris, will not return to Canada until the end of July. Before returning he will negotiate with the French government for the amendment and extension of the Franco-Canadian commercial treaty. On June 8 negotiations for a treaty regulating the commerce of Canada and Italy will be begun.

Financial.

The United States Steel Corporation has applied to the London Stock Exchange for an official quotation for $1,202,500 additional ten-sixty year 5 per cent. sinking fund gold bonds, making a total of $167,404,000.

The time for the exchange of the common and preferred stock of the Federal Sugar Refining Company, the New Jersey corporation, for the stock of the Federal Sugar Refining Company of Yonkers, the New York corporation, expired Tuesday.

The total loans and discounts, cash holdings, deposits of banks and trust companies, and individual deposits subject to check of New York national banks in the Borough of Manhattan, according to their statements made to the Comptroller of the Currency as of May 20, 1907, March 22, 1907, and June 18, 1906, are as follows:

	May 20, '07	*Mar.* 22, '07	*June* 18, '06
Loans and discounts	$753,048,563	$686,262,553	$708,628,615
Cash (specie and legal tenders)	230,730,897	220,243,218	223,654,769
Deposits of banks and trust companies	531,628,072	477,794,824	509,944,238
Individual deposits subject to check	464,534,165	444,885,552	467,623,640

The statement of the condition of national banks of New York City, Borough of Manhattan, on May 20, 1907, compares as follows with that of March 22, 1907: Loans and discounts increased $66,786,010; cash increased $10,487,679; deposits of banks and trust companies increased $53,833,248, and individual deposits subject to check increased $19,648,613.

The London *Economist*, in its issue of May 18, has an article on "The Slump in Home Rails." It shows that there has been a depreciation of from 5½ to 29 points in the prices of ordinary stocks during a year past, notwithstanding an increase in traffic earnings. On another page the *Economist* contains the following significant sentence: "At the end of last year the banks were offering special attractions to depositors, as with the bank rate at 6 per cent., they were giving 4 per cent. to their customers, a higher rate than could be got by investment in securities of anything approaching the highest class."

The London *Bankers' Magazine* says: "The fall which had occurred in values has considerably shaken public confidence, and to that fact, as well as to the knowledge that a number of weak speculative positions have still to be liquidated, must be attributed the profound stagnation in business which has characterized the Stock Exchange during the month. On balance, our list of representative securities, which a month ago showed a decline of 125 millions, now exhibits a net increase of merely £2,000,000, the exact figures being as follows: Aggregate value of 387 representative securities on March 20, 1907, £3,691,349,000; aggregate value of 387 representative securities on April 20, 1907, £3,693,430,000, showing an increase of £2,081,000."

The New York *Journal of Commerce* estimates June interest and dividend disbursements at $70,100,000, of which dividends call for $35,100,000, an increase of $6,100,000 over 1906.

The Supreme Court of Louisiana has declared invalid the law passed at the last session of the legislature taxing cotton and stock brokers on a new basis, holding that the license tax levied by that law is graduated so as to make the smaller business pay in proportion 100 per cent. more than the larger business.

Industrial.

The Census Bureau has prepared a preliminary report on the consumption of pulp wood in the United States for the calendar year ended December 31, 1906, which shows that during that period 3,646,693 cords were used, as compared with 3,192,123 cords utilized in the previous year. This is an increase of 154,570 cords. The principal wood used in 1906 was domestic spruce, of which 1,785,680 cords were consumed. Classified according to methods of reducing into pulp, the mechanical process took 1,197,780 cords; the sulphite process, 1,944,136 cords, and the soda process, 504,777 cords. The figures cover the operations of 250 mills in 1906 and 237 in 1905.

Some interesting details of the progress made in the shipbuilding trade of Germany in recent years are given by the *National Zeitung*. Germany, it appears, has now secured second place in the world's shipbuilding, and comes next to Great Britain, but although it has attained this position, Germany's output for 1906 was only one-fifth of that of Great Britain, the latter country accounting for 1,826,300 tons out of a total of 2,919,700 tons built, as against Germany's 342,000 tons. The shipbuilding trade of Germany, however, is developing rapidly, for last year's total compared with only 200,000 tons in 1902, while at the present time there are building in that country steamers of an aggregate tonnage of 369,500.

The commission under the presidency of the Russian minister of commerce, which has been considering the future of the Russian half of the island of Saghalien, has decided in favor of permitting foreigners, with the consent of the ministers of commerce, finance and agriculture, to exploit the mineral wealth in that part of the empire.

Upwards of 85,000 New England mill operators have had their wages advanced 10 per cent.

The value of the different metals produced in Canada during 1906 shows increase in all the leading classes over that of 1905. The coal product was valued at nearly $20,000,000. The figures for 1906 are as follows:

	1906	*Increase*
Copper	$10,994,095	$3,496,435
Gold	12,023,932	2,462,931
Nickel	8,918,884	1,398,308
Silver	5,723,097	2,105,422
Lead	3,066,094	384,462
Iron	1,873,577	692,284
Coal	19,945,052	2,424,769

The total mineral production for 1906 is estimated by Chambre de Commerce at Montreal at $80,000,000, representing 15 per cent. increase over 1905.

According to the *American Federationist*, 739 unions, with a membership of 59,824, had one-half of 1 per cent. idle in April. In March 1,321 unions, with 110,000 members, reported 1.3 per cent. without employment. In April, 1906, the ratio was 2.25 per cent.

Despite the continued strike of the longshoremen in the port of New York, matters are coming round to normal with the transatlantic steamship lines affected. This was shown by Tuesday's returns of exports from New York for the week ending May 25. The returns for the week ending May 25 show that the value of the exports for the week was $9,758,632, as against $6,456,067 for the week ending May 18, when the strike was at its height, and $13,400,963 for the week ending May 11, before the effects of the strike began to be felt. The exports to England for the week ending May 11 were $3,237,762. They fell to $1,603,953 for the week ending May 18 and jumped to $2,322,403 for the week ending May 25.

Railroads.

Since October last 1,000 Harvey permanent steel stakes have been applied to flat and gondola lumber cars on twelve railroads rather widely distributed throughout the United States. Moreover, 500 have recently been ordered for the Atlantic Coast Line and Illinois Central. The cost of stakes, says the *Railway Age*, is $4 each for gondola cars and $6 for flat cars. As there are ten stakes per car, the costs per car are $40 and $60 respectively. The experiments have been successful and have demonstrated the possibility of increasing the capacity of the car by the use of the stakes.

The Illinois House bill, No. 777, legalizing the merger of the lines now embraced in the Chicago & Western Indiana Railroad, was approved by the executive Tuesday. Governor Deneen filed with the bill an affidavit from the president and the vice-president of the road attesting that the acts of the road had all been legal, and that the only purpose of the act in question was to lift a cloud from the bonds issued since the merger went into effect.

Governor Deneen, of Illinois, has signed the 2-cent railroad passenger fare bill. As a result all roads in Illinois will have to sell tickets at the rate of 2 cents a mile on and after July 1.

Gains of well over $1,000,000 in gross earnings for the month of April were reported Monday both by the Rock Island and the 'Frisco systems, and the net earnings of both roads showed large gains. The increase in net earnings over April, 1906, was $332,957 for the Rock Island and $509,398 for the 'Frisco system. For the ten months ended April 30 the gross earnings of the Rock Island amounted to $49,759,413, an increase of $6,623,763, and the net to $15,133,842, an increase of $2,613,451, while for the same period the 'Frisco system shows gross earnings of $41,503,101, an increase of $6,058,364, and net earnings of $14,019,550, an increase of $2,327,073. For both systems the increase in gross for the ten months amounted to $12,775,240, and the increase in net to $4,997,960.

Bondholders of the Toledo Railway & Terminal Company at the foreclosure sale on Tuesday bought in the property through Andrew Sullivan, of Brooklyn, at the upset price of $2,000,000.

Wm. A. Read & Co.

STATE OF TRADE.

[A Summary of Special Telegrams to BRADSTREET'S.]

Unseasonably cold or wet weather, with frosts, throughout the northern half of the country has again been a bar to retail trade, except in a few sections, and the coldest May in twenty-five years closes with large stocks of goods undisposed of by retailers. The crop situation, which has in it the possibilities of future trade, has, however, been helped by good progress in spring wheat and some gain in parts of the winter-wheat belt which has had necessary moisture. Corn planting has been finished, but the cotton crop appears to have either stood still or gone backward, as a result of cold nights, heavy rains and poor stands. There is still general complaint that reorder business from jobbers and manufacturers, especially in all kinds of wearing apparel, has been smaller than expected, and there is more manifest this week a disposition to await developments before embarking heavily for the future, though the volume of business booked ahead compares well with preceding years. Something like a transference of interest and of speculation from grain to cotton is evidenced this week by a reaction from new high western prices touched early in the week in the case of wheat, and in a sharp advance in cotton on damage reports and excited speculation. Money is easy, but collections are slow or backward at best. Strikes are more in evidence, witness the continued interruption to business at San Francisco, the lingering of the longshoremen's strike at New York, and smaller strikes of southern car-shop and street-railway employees. There is also some prospect of unsettlement in the reports of demands for higher wage scales by iron workers and coal miners in the central west. Eastern cotton-mill employees, numbering 80,000, have secured advances in wages, and there is apparently a more aggressive disposition manifesting itself among wage earners generally, either as regards compensation or as to union recognition. Bank clearings are irregular, but, on the whole, smaller than last week or last year. Failures are few and comparatively unimportant.

Grain crop reports to BRADSTREET'S are more reassuring, but the coldest May since 1882 makes the crops generally very late, and the claim is that winter-wheat conditions, as a whole, improved very little in that month. Frosts all over the west this week damaged truck and fruits, did not harm wheat much, except where it was jointed, but retarded corn and oats. The late season and abnormal conditions make generalization and accurate estimate impossible. Best opinion is that results will be doubtful until harvest. Best reports this week come from the Pacific northwest, which has been favorable right along, and from the states of Minnesota and the Dakotas, where the crop has been all planted and is coming up better than earlier hoped. Ten to 15 per cent. decrease in area is indicated in this section, but barley, flax and corn areas will be larger. Winter-wheat crop reports are irregular, improvement being shown in Nebraska and parts of Kansas, where rain has fallen, and in Indiana. Green bugs have disappeared in southern Kansas, which has had some rain but needs more. Indiana reports are the best yet received from that state. In western Missouri reports are very irregular, and a much smaller crop is indicated than last year. Maximum estimates of Kansas yield are 70,000,000 bushels, against 82,000,000 last year, and a record crop of 99,000,000 bushels. Nebraskan prospects are for 75 per cent of last year's yield. Corn planting is finished, except in the northwest, and replanting is general. Fear of delay in planting this crop has, therefore, been removed, but the crop is two to three weeks late in the southwest. Oats are a very spotted crop. Cold weather did some harm this week. In the southwest reports are poor and the Kansas crop is a failure. Green bugs are reported in the Illinois oat fields. Pastures are in poor condition, much feeding by farmers is necessary, and hay is $22 per ton.

The cotton crop is two weeks to a month late, stands are poor and the outlook is certainly not good. The past week has been too cold, especially at nights; light frosts are reported from Texas, and the necessity of repeated replanting is laid stress upon. In Alabama some fields have been planted three times. Taken as a whole, the crop is so late and the outlook so uncertain that a long spell of good weather will be necessary before definite reports as to ultimate outcome are possible.

The features in the wool market this week are the sale at Boston of 2,500,000 pounds of medium fleece wool to the largest single manufacturing interest at a price refused some weeks ago, and the competition reported at the west between dealers and manufacturers resulting in prices being pushed up almost to last year's level. Eastern dealers report prices paid too high for eastern buyers, but the primary markets are strong.

The shoe and leather markets are quiet as a whole, as is natural in a between-seasons market. The feature at Boston has been the report of a large sale of black glazed kid at a concession. This, while not confirmed, seemed to have an effect, though fashion influences working in favor of colored goods were assigned as a possible influence. Shoe manufacturers are receiving more orders, but are reported not satisfied with orders for heavy goods already booked. Shipments for the year are 3.5 per cent. below 1906. Other eastern markets note the influence of unseasonable weather on demand at retail. Western manufacturers are reported doing well, and St. Louis manufacturers are running nights.

Cotton, which showed an easing tendency early in the week, later advanced, with excited speculation on Wednesday and again on Friday on bad crop reports, heavy rains and cold nights. July advanced 25 points on May 29, while October gained 34 points, and on Friday rose even more, the net gain from Friday to Friday being 60 points on October and 58 points on July, with spots up 65 points.

Tobacco buyers have quite generally provided themselves for months, in some cases a year to come. They are hoping for further unloading of 1905 domestic goods at a shade under present prices. Pennsylvania, that was 20 cents, is now offered at 18 cents. Sumatra prices were practically fixed for the year at the March, 1907, inscription, and are high. Havana crops for two years have been short and prices high. Sales by those on the road are better, and manufacturers of cigars are fairly busy.

Wheat prices were excited early, sharp fluctuations culminating in close to the highest prices of the year at New York and record prices at Chicago, but broke later on and closed a trifle lower than a week ago. Features were the display of export interest at concessions both for durum and regular flour wheat and for corn. The bulge early in the week reached its climax on Monday, May 27, when the reports of a freeze in the west caused July delivery at New York to sell at $1.08⅝, as against $1.08⅞, the high point reached on May 22. At Chicago July reached $1.03½, the high of the year. Warmer weather and reports of general rains on Tuesday caused a sharp decline, the close on that day being $1.05 for July at New York and 98½ cents at Chicago, losses of respectively 3⅝ and 5 cents from the high of May 27. Corn gained 1 cent on May 25 on bad weather talk and good export inquiry, and oats were also up, both holding the gain well up to the end of the week on good export demand. On Friday wheat and corn each rose ½ cent, while oats gained 1 cent, making the net decline on wheat for the week ⅜ cent, while corn is up 1½ cents and oats 2 cents. Foreign wheat crop reports were, on the whole, rather poor, though reports of the breaking of the drought in central Europe had some effect. Pork and lard were slightly easier on large receipts of hogs at the west. Cotton-seed oil is 3 cents up on damage reports.

The cotton goods situation is a very strong one, due as much to the strength of raw material as to the extent of the demand for print cloths, bleached goods and similar fabrics. Print cloths are 4-13 cent higher on the week, and a number of other staple lines have been put up.

The cold, backward season, with reports of damage to vegetables, is responsible for higher prices and a close cleaning up of all kinds of canned vegetables. Dried fruits are also higher. Dairy products are steady on good demand, but eggs have weakened on large receipts and despite very large purchases to go in cold storage.

Cold weather is a quieting influence in the sugar trade, as affecting the demand for summer delicacies and for early canning purposes, but it is interesting to note that the backward weather is assigned as a reason for quiet in demand for furniture, carpets and house furnishings generally.

Pig-iron markets are quiet but very strong in price. Supplies for early delivery are very scarce, hence foreign iron continues to be purchased in moderate volume. Fair sales of southern iron have been made for delivery in the first part of 1908, the basis being $18 to $18.50, Birmingham. Considerable new business in steel rails has been booked, most of it for delivery in 1908. Further orders are pending, but one inquiry for rails for the second half of 1908 has been withdrawn. May was a good month for structural steel interests, the tonnage booked being very heavy, and large orders are looked for within the next few months. Agricultural implement makers have ordered steel bars and shapes very freely. Coke continues weak, with demand still below the supply. Cold weather has made for a better demand for anthracite coal, and bituminous is also stronger. Copper appears to be even easier than it was last week, while offerings of electrolytic are larger, but business is quiet. It is said that some consumers who purchased copper months ago are offering it for sale.

Stock-market quotations at New York are strong at a decided recovery from another sharp decline at the beginning of the present week. Slightly more favorable grain crop advices and the favorable construction of the President's latest address on the railroad question figure as prominent bullish factors, together with the failure of shipments of $2,800,000 gold to Paris to unsettle the New York loan market. Foreign exchange, however, continues firm, demand sterling being 4.86.75.

Bank clearings for the week ending May 30 (a holiday period) aggregate $2,158,204,000, 21 per cent. under last week and 7 per cent. below this week last year. Outside of New York exchanges amount to $876,131,000, 21 per cent. less than last week, but 4 per cent. over the corresponding week last year.

Business failures for the week ending May 30 number 142, against 165 last week, 127 in the like week of 1906, 154 in 1905, 194 in 1904 and 157 in 1903.

Wheat, including flour, exports from the United States and Canada for the week ending May 30 aggregated 2,401,994 bushels, against 3,684,683 bushels last week, 2,526,739 bushels this week last year, 1,309,223 bushels in 1905 and 3,900,645 bushels in 1902. For the past forty-eight weeks of the fiscal year the exports are 155,681,760 bushels, against 125,326,106 bushels in 1905-06, 58,535,410 bushels in 1904-05 and 234,688,391 bushels in 1901-02. Corn exports for the week are 864,255 bushels, against 1,669,115 bushels last week, 614,815 bushels a year ago and 457,914 bushels in 1905. For the fiscal year to date the exports are 67,612,961 bushels, against 107,933,701 bushels in 1905-06 and 74,879,065 bushels in 1904-05.

IN CANADA.

Except in parts of western Canada, where better weather has brightened retail trade, business, as a whole, has been slow both with retailers and jobbers. Reorder trade is still checked, but deliveries on orders of goods bought some time ago are heavy and shipments are large. The dry-goods trade is relatively the quietest, while metals, hardware and building materials are very active. Immigration is of unprecedented volume. Some improvement work planned by railroads will have to be postponed, it is said, because it will be impossible to secure material. Collections at Montreal are not of the quickest, owing, it is said, to past weather conditions. In Ontario, as in Quebec, the dry-goods trade shows most effects of unseasonable weather. A good fall trade is reported, however. Winnipeg this week reports more doing in retail lines, but collections are still slow. Wheat seeding finished late, but the outlook is fairly hopeful. Trade has been better on the Pacific coast and collections are fair to good. Failures for the week number 14, as against 19 last week and 19 in this week a year ago. Clearings for the week aggregate $72,803,000, a decrease of 3.9 per cent. from last week, but a gain of 8.7 per cent. over this week a year ago.

GRAIN CROPS MAKE SOME HEADWAY.

COLD WEATHER RETARDS BUT DOES NOT INJURE WHEAT AND CORN. THE NORTHWESTERN PROSPECT MORE REASSURING, DESPITE 10 TO 15 PER CENT. LESS ACREAGE. PACIFIC COAST WHEAT IN GOOD SHAPE. WINTER WHEAT SHOWS EFFECT OF COLDEST MAY FOR TWENTY-FIVE YEARS. RAINS HELP CROP IN NEBRASKA. GREEN BUGS DISAPPEAR IN SOUTHWEST, BUT SPREAD IN ILLINOIS. FROST DAMAGES TRUCK AND FRUITS. CORN PLANTING FINISHED IN GOOD SEASON, BUT GROWTH BACKWARD. OATS A SPOTTED, SHORT CROP. PASTURES POOR. MUCH FEEDING NECESSARY. COTTON REPORTS UNDENIABLY POOR. HEAVY RAINS, COLD NIGHTS AND BAD STANDS COMPLAINED OF.

CHICAGO.—The month of May was abnormally cold, temperatures being the lowest since 1882, according to the weather reports. Growth of crops has not been normal. Frosts have prevailed this week over the west, southwest and parts of the northwest and Ohio valley. The extent of the damage to the wheat crop and to oats and other crops from low temperatures cannot be determined until harvest. Wheat that was jointed and headed, as a good deal of it was, has been hurt. Kansas and Nebraska have had rain the past week, but Kansas needs more. The crop there has gone backward, and the highest estimate now is 70,000,000 bushels, which is a fair average. Taking the winter-wheat crop on the whole, the improvement during the month of May has been small, some sections losing more than others gained. Spring-wheat acreage is at least 14 per cent. less than last year, and the area sown to barley in the northwest is 16 per cent. larger. Warmer weather, following recently needed rains, has revived that crop. In the Canadian northwest seeding has been completed and crop reports are irregular. Oats are doing rather poorly in the west and southwest, and in Kansas are a failure. In sections of southern Minnesota and the northeastern part of Iowa freezing weather has damaged the crop. Green bugs are said to be all over the oat fields of Illinois and are doing some damage, but reports as to wheat injury are irregular.

Corn planting has been finished; the acreage is large and replanting is under way. In the southwest the crop has made slow growth and is two to three weeks behind the normal. Pastures are poor and farmers have been obliged to feed stock for a longer period than usual. Hay is scarce and brings $22 per ton.

ST. LOUIS.—Up to and including May 25 the weather throughout the state was favorable, but since then a cold wave has offset the effect of the few days of sunshine. Except in one or two counties, the soil is in excellent condition.

SIOUX CITY.—Good rains have fallen, but the weather is still cold and crops are affected thereby.

DAVENPORT.—Crop reports are not flattering. Conflicting opinions prevail. As a result of continued unseasonable weather, the general belief is that the yield will be much less than last year's.

OMAHA.—Corn is practically all planted and the acreage will exceed that of last year. Recent frosts have greatly damaged garden truck and fruits. A general rainfall has improved the condition of wheat and other small grain. Authorities estimate that the yield will be from 15 to 25 per cent. short of last year's.

WICHITA.—Green bugs are dying out and wheat prospects are brighter. Some rain has fallen, but not enough.

ST. JOSEPH.—Four counties report the condition of wheat very good. The balance of our territory is retarded by cold weather and lack of moisture, and in some counties the probable yield is now estimated at about one-half.

INDIANAPOLIS. — Crops in general are now said to be doing very well in Indiana, though the hailstorm of a few days ago is believed to have done some damage in the southern part of the state. Oats are reported in excellent condition.

KANSAS CITY.—Good rains are reported in many sections of Kansas, and no unfavorable reports are heard as to the wheat crop in that state, but warm weather is needed.

MINNEAPOLIS.—Except in corn, spring planting in the northwest is practically all done. Early-sown grain is coming on finely, the cool weather being particularly favorable for it. The present conditions of ground and crops are all that could be reasonably desired, and prospects for the future are reassuring.

ST. PAUL.—Crop reports are favorable from all quarters in Minnesota and North Dakota. Wheat is up and doing well, and with favorable weather, prospects are bright. Oats in places are reported making fair progress. Barley is being sown and flax has yet to be planted. More barley, flax and corn will be sown than a year ago, but less wheat. While everything is late, no one is complaining.

SIOUX FALLS.—Temperatures are below normal. A heavy frost occurred on the 26th. Grain was not much damaged, but garden truck and fruit were badly hurt. Small grain is backward but doing well. Corn is nearly all planted.

PORTLAND, ORE.—Crops are in good condition.

SPOKANE.—Wheat is looking good.

IN THE SOUTH.

MEMPHIS. — Crops are backward and the season is one month late.

MOBILE.—Reports regarding the condition of cotton are rather pessimistic, and the yield will undoubtedly be much smaller than last year.

MONTGOMERY. — Three-fourths of the cotton planters report very poor stands, most of them have replanted three times, and it is thought that the cold snap of the 27th did some damage.

DALLAS. — The weather has been unusually cold for the season, and light frost has been reported in the lowlands. Continuously heavy rains have fallen throughout this section. A considerable portion of the cotton has not come up and replanting will be necessary. Cotton that is up is weedy, and the crop outlook is not encouraging.

AUGUSTA.—Cold nights have retarded the growth of cotton.

LITTLE ROCK.—Cotton is not making progress. The crop is three to four weeks late and the stand is very poor.

WACO. — Recent heavy rains covering this entire section damaged cut oats and hurt cotton. Corn is doing finely.

CHARLESTON, S. C.—Cotton is about ten days late, due to cold nights. The acreage is about the same as last year's.

NEW ORLEANS.—The condition of the cotton crop appears to be bad. There are sections where the damage is serious, and there is hardly a possibility of a fair crop, though in some spots the crop is doing rather well. There seems little chance for an intelligent estimate of the whole damage until we have worked away from the prevailing unfavorable weather conditions. It is possible clear, warm weather would pull the average up so as to show damage of only 10 or 15 per cent. Rice is doing fairly well; sugar cane is growing well, but the fields are dirty.

ATLANTA. — Cold weather the past week affected cotton, causing it to stop growing, and the plant does not appear to be in a healthy condition. Cotton-seed crushers in convention here have decided to let farmers have sufficient seed to replant at a moderate cost, but, owing to the lateness of the season, some farmers are reported plowing up ground where the stand has not been made, to replant with other crops.

TRADE REPORTS.

At New York business in dry goods is fair, though some departments complain of backwardness, owing to unfavorable weather. This applies more especially to goods for spring wear, such as ladies' waists, spring costumes and lighter goods for men's wear. Manufacturers of these lines of goods are carrying over more stock than they like. Wholesale houses also feel the dullness and are not receiving reorders for light-weight fabrics in dress goods and light weights in worsteds. The cotton-goods business continues prosperous and demand exceeds the supply, the scarcity being in gray goods. Converters cannot obtain sufficient of the latter materials to keep their stocks up, and in many instances have to decline orders. Prices are very firm and are steadily advancing. A satisfactory proportion of orders for fall delivery has been received, and though a number of influences depress business, the dry-goods situation is satisfactory and collections are reported good. Woolen and worsted yarns continue high in price, and demand is still in excess of the supply. Cotton yarns also continue scarce and prices are going higher. The raw silk market is practically idle. Unfavorable weather conditions are felt in the cloak and suit trade, business being at a standstill; collections are slow. In wholesale men's furnishings, manufacturers of shirts, gloves and neckwear are doing a good business and have all the orders they can conveniently handle. Hosiery and knit-goods jobbers complain of a scarcity of some grades of goods, but not of orders. Business in the wholesale notion line is steady and collections are fairly good. Dealers in rags and shoddy continue active. Wholesale grocers say trade is dull, out-of-town orders are few, and local dealers are buying only to fill actual orders. Retail trade is also less active. Receipts of butter still continue large, but there is a steady demand and prices are firm. The storing of large quantities of eggs maintains prices. The wine and spirit business, which has been dull for the past few weeks, shows some improvement, despite the advance in price. Distillers, however, are offering concessions to purchasers of large lots, to clear surplus on hand. Flour is inactive on the advance in sympathy with the rise in wheat. Jobbers bought freely on the first spurt, but now await developments. Supplies of live stock and dressed meats are only moderate and prices have slightly advanced. The anthracite coal trade is active for the season of the year, and bituminous is also a little stronger, the unseasonable weather having interfered with prompt deliveries. Manufacturers of gas fixtures report a slowing up of orders and complain of poor collections. In the china and glassware trades business is practically over for the season. Pig iron is firm and quiet, and delivery of fresh supplies is not anticipated before October 1. Structural steel is in good demand; copper is very quiet and prices are easy. In the electrical trade, complaints are heard of poor collections. Manufacturers of jute cordage find business very brisk, and in some cases are declining orders. Demand for oakum is good. Cotton duck continues firm. An active business is being transacted in india cord and twine. Wholesale paper is in seasonable demand and collections are fair. Retail jewelers complain of dull business in diamonds and precious stones, but they say conditions are improving. Tobacco is dull, but prices are very firm. General dullness obtains in the leather trade, particularly in the pocketbook, belt and bag lines. The retail shoe trade is also unusually quiet. Dealers in lumber and building materials find trade quiet; prices have generally declined and collections are poor.

The following telegrams show trade conditions at the cities mentioned for the week ending May 31:

BOSTON.—Backwardness in spring trade in dry-goods is general and pronounced. Retail sales of made-up garments both for outer and under wear have been much restricted, and considerable stocks are left to be sold at cut rates or carried over. Jobbers and cutters having accumulated stocks of fancy goods or novelties on hand, have to some extent unloaded at reduced prices. The primary markets for cotton goods are very strong and further advances have been made on leading lines of goods, including bleached and colored fabrics and prints. In some lines no spot goods are to be obtained direct from mills. A general advance in wages of mill operatives throughout New England has been granted, and cotton is at a high level. Leather, on the whole, is quiet. Between-seasons dullness prevails in the shoe factories. Orders for fall goods are still short for the time of year. Shipments of footwear this week are nearly 18 per cent. less than same week last year. The general paper market shows that a seasonable business is doing and that prices are firm. News paper and box boards are in good demand. Trade in paper stock is only of moderate proportions, consumers not being disposed to order in generous quantities at prevailing quotations in view of the accumulation of stock. Business is quiet in all lines of lumber, particularly in northern and eastern lumber, where a long, hard winter and backward spring have affected the business materially. In anthracite coal orders continue large, the cold spring weather making retail trade very active. Structural steel orders are plentiful. Other lines of iron and metals are quiet. There is a fair demand for rectified whiskies and all grades of wines. The large wholesalers report trade conditions satisfactory. Brewers are not so busy as they should be at this time, but this is attributed to weather conditions. Leaf-tobacco dealers report a fair volume of trade. Manufacturing confectioners report good business. Backward weather has retarded business to a considerable extent in retail furniture, carpets and upholstery, and collections in the jobbing trade are, consequently, slower than usual.

PROVIDENCE.—The manufacturing jewelry business is in a satisfactory condition. Supply dealers in this line report considerable activity. Cotton goods are firm in demand and stocks are low. Structural metals show a strong market. Worsted goods are firm. Collections are slow.

PORTLAND, ME.—The weather continues cold, and the volume of business in most lines is small. Wholesale boots and shoes, millinery, dry goods and wholesale groceries report business quiet, and collections are not better than fair.

PHILADELPHIA.—Grain prices are too high for exporters and local business is limited to actual needs. Flour jobbers also report unsatisfactory business; consumers demanding lower prices, while millers are disposed to advance quotations. Chemicals and dyestuffs are fairly active, and drugs are in good demand. Paints and glass continue draggy, and manufacturers report diminished demand due to unseasonable weather, which is retarding operation work. Prices, however, remain firm. Lumbermen report a very fair business, but they are not rushed, the movement of material not being up to expectations, but the market is firm and steady. A fair business is doing in hides and skins at firmer prices, and with a plentiful supply of better quality skins. Glazed kid business is fair, prices for raw material slightly off, but high prices still prevail for finished product. The leather market shows no appreciable change, business at times being fair but relaxing again, and the market is slightly off but with no actual break. Boot and shoe dealers report no change in their condition, business being spasmodic owing to unsettled weather conditions. With more seasonable weather they look for an improvement. Liquor markets, while steady, are scarcely up to normal for this season. Straight rye has a tendency to advance in price because of the provisions of pure food law, and is dull; blends are selling better. Wool is quiet, and there is little change in the textile situation. Dry-goods jobbers complain that weather conditions have been unfavorable and that collections continue poor. Predictions of an easier iron market have not been verified, demand and prices for pig continuing decidedly strong. Finished materials, as previously noted, do not exhibit the same strength, prices being out of proportion to raw materials and less satisfactory. Coal trade holds good and prices steady, though in the lower grades of bituminous prices are not quite so firm as they were.

PITTSBURGH.—Quiet strength prevails in the pig-iron market. There is a moderate inquiry, but there is so little iron to sell that sales are few. Two thousand tons of Bessemer for May and June delivery were sold during the week at $23.50, valley furnaces, and 1,000 tons of Bessemer for delivery during the last four months of the year at $23.25. All finishing mills continue to be employed to full capacity on orders booked ahead for months, with new orders coming forward in fair volume. Coke is still weak, and standard grade furnace coke is selling down to $2. Nominal quotations for spot pig iron at the valley furnaces are as follows: Standard Bessemer, $24; chilled basic, $24; No. 2 foundry, $25, and gray forge, $22.35. Standard Connellsville furnace coke is quoted at $2, and foundry coke at $3 to $3.25. In general merchandise lines business is of average volume, retarded in some lines by unseasonable weather, but on the whole is satisfactory.

BUFFALO.—Unfavorable weather has affected retail trade to some extent and strikes on the docks have delayed navigation. Collections are reported somewhat slow.

BALTIMORE. — Cold weather has materially reduced retail trade. June finds men's furnishings and clothiers carrying unusually large stocks, with the straw-hat stocks practically unbroken, and settlement with supply houses more or less slow. Collections in May were very disappointing, and fewer anticipations in bills are noted than for some time. While fall orders for clothing, shoes and other staples have been satisfactory, immediate business is below normal. In some sections, due to crops and weather conditions, there is a tendency to postpone future orders. The fruit and produce crop is late in arriving, and prices are high. In canned goods the market is quite active and the large supplies of the earlier year have gone into consumption, and the season starts practically with bare floors. Seasonable business is reported in crockery, glassware and harness. Paper at wholesale is active, and prices are firm and advancing. Mill deliveries are somewhat easier. Jobbers of woodenware report prices very firm, with a scarcity of raw material, and collections are satisfactory. Receipts of Maryland leaf tobacco are smaller, and the crop shows a poorer leaf; prices remain firm. Manufacturers show a tendency to await buying in hopes of a decrease in price. Grocery jobbers show a slight improvement over last week. Flour prices are advancing. The turpentine market is steady, and spirits are active. Collections are about normal. Money is in better demand.

CINCINNATI.—Continued bad weather has seriously affected trade in boots and shoes, dry goods and groceries, but factories are busy on accumulated orders. Building is active, and the summer promises to be an exceedingly busy one.

CHICAGO.—A quieting down is noticeable in the jobbing trade, but manufacturers are well supplied with orders. Unfavorable weather has caused a curtailment in jobbing and retail sales, but the latter increase rapidly when bright weather appears. The tendency to reductions in crop estimates has rather a restricting influence on purchases of goods for future delivery, although some jobbers report sales fully as large as last year, and dry goods have the best of it. Iron and steel continue to meet a ready sale, and mills are reporting no let-up in orders and no cancellations. Pig iron is held firmly, with only a moderate business in small lots. Coal is having a better sale than usual for this season. In lumber there is a shading of prices on hemlock and yellow pine, but other woods are held firmly. Groceries and other lines are having a fair

sale. Potatoes are higher, and in other lines of produce there has been little change. Cattle are higher, sheep values represent little change and hogs are lower. Receipts of cattle have decreased and hogs and sheep increased. Money is easy and demand fair. Banks are well loaned up.

LOUISVILLE.—Business in wholesale and manufacturing lines holds up remarkably well considering adverse weather conditions. Retail trade has been greatly enlivened by two weeks of warmer weather. Dry goods, clothing and shoe jobbers report a large fall business, but say they are getting few reorders. Kentucky whiskey dealers report a good demand at firm and advancing prices. Receipts in the local grain market are light. Very little grain is now in the hands of Kentucky or Southern Indiana farmers, and the mills are not thought to have enough grain to last till harvest. Collections are fair.

INDIANAPOLIS. — Trade generally is reported good, though collections in some quarters are reported slow, owing largely to the unseasonable weather that has existed.

ST. LOUIS.—A return to unfavorable weather conditions has done much to interfere with retail trade and certain jobbing lines. Dry goods and kindred lines are less active, although the volume is believed to be fully equal to that of last season. Shoe manufacturers report a good business and factories are busy, many of them working overtime. Hardware dealers say orders are plentiful and prices are firm. Lumber and all building material shows no signs of abatement. An active business is being done by farm implement and machine houses and prices are well maintained.

KANSAS CITY. — Continued cold weather has retarded trade in general and warm weather is needed to move spring gooods. Construction work continues uninterrupted and demand for all kinds of lumber and building material is good. Jobbers in farm machinery report heavy shipments. Collections are a trifle backward.

WICHITA.—Cold weather retards retail trade. Wholesale business shows an increase. Collections are backward.

MILWAUKEE. — Retailers and jobbers report some improvement in trade. Collections are variable.

SIOUX CITY.—Good rains have fallen, but cold weather still hampers trade. Collections are fair.

DAVENPORT.—Retail trade is only fair, owing to unseasonable weather. Manufacturers in general are busy. Labor continues to demand increased wages. Collections are slow.

ST. PAUL.—Trade conditions have been good in all lines save dry goods, which reports current business light, but orders for future shipment exceedingly large. Collections have been very fair for May, the rise in the price of wheat making itself felt.

MINNEAPOLIS.—General business is improving as the weather becomes more seasonable and prevailing conditions are regarded as satisfactory. In all staple lines business is excellent and collections are fair. The flour trade is quiet and no immediate improvement is looked for. Lumber is firm in price and many sizes are not to be readily found.

OMAHA.—Unseasonable weather continues to retard business, and collections are only fair.

LINCOLN.—The weather remains unfavorable to trade generally, although improvement is apparent in some lines. Collections remain fair.

SIOUX FALLS.—Trade is slow and collections slow to fair.

CHARLESTON.—Jobbers in dry goods, notions, shoes and hats report trade quiet. The grocery trade is holding its own. Collections are slow.

RICHMOND.—Dealers in dry goods and notions have had a satisfactory season, but on account of unseasonable weather reordering has been light. Considerable business for fall is being booked. Dealers in machinery, mill and railway supplies are doing an active trade. Sales of agricultural implements show improvement; dealers in this line expect a larger business with more favorable weather. Retail trade shows improvement, large crowds attending different attractions having greatly increased sales. Collections are slow.

AUGUSTA.—Trade in all lines is fair. Collections are fair.

ATLANTA. — In many lines orders for future delivery show a decrease, caused by the gloomy outlook for cotton and fruit crops. Wholesale grocers and manufacturers of confectionery appear to be doing the usual amount of business, but report collections dragging. Furniture manufacturers report a decrease in business.

BIRMINGHAM.—Trade continues unsettled on account of the strike of street railway employees here and of railway machinists. The trade council at Birmingham has ordered all union employees in the district to strike June 3, unless the street railway union is recognized and its members reinstated on a satisfactory basis. Retail trade is quiet. Jobbers say they are doing about the usual volume of business. Collections are fair.

MOBILE.—Warm weather the past two weeks stimulated trade in all lines, and jobbers look for increased sales for fall delivery in the near future if the warm weather continues. Collections are fair. High grade timber is bringing good prices, but for other grades there is little demand and prices are low.

MONTGOMERY.—The unsettled conditions of the cotton crop has had a tendency to retard trade in all lines. Neither jobbers nor retailers are pushing time sales. Collections are very slow.

CHATTANOOGA.—Trade in jobbing and retail lines continues active. Collections are good.

MEMPHIS. — Cold, wet weather retards retail trade. Collections are slow.

NASHVILLE.—Continued unseasonable weather causes trade in all lines to be dull. Collections are only fair.

LITTLE ROCK.—Jobbers report business practically at a standstill, due to continued cold, wet weather. Retail trade is fair.

NEW ORLEANS. — Retail trade is quiet and jobbers report only a hand-to-mouth business.

DALLAS.—Jobbers are about holding their own, but retail trade is at a standstill. Collections are very quiet.

WACO.—Trade is quiet and collections are slow.

SAN FRANCISCO.—The industrial situation shows only a slight improvement. Money is very tight and collections are difficult.

SEATTLE.—Wholesale and retail trade continues good. Alaska shipments are reported especially heavy at this time. Activity in building still continues. Collections are fair.

SPOKANE.—Wholesalers report a healthy demand for their goods. Collections are fair. Building and real estate are active.

TACOMA.—Wholesale and retail trade is satisfactory. Real estate is active. Collections are fair.

PORTLAND, ORE.—Favorable weather conditions induce a continued gain in the volume of business in all lines.

TORONTO.—Trade here is moving fairly well. Unseasonable weather still interferes with spring reorder trade in dry goods, but all other branches of business are active. In dry goods there is still a scarcity of textiles, and orders placed months ago are only now being filled. Values all hold firm. A good volume of business is being done on account of fall; orders are heavy and well distributed. Manufacturers of ready-made clothing report the business the heaviest known; notwithstanding the fact that prices are higher in all lines, orders for both men's and women's wear are heavy, and the quality of the buying is worthy of note. Orders for groceries are good, particularly from western Canada. A heavy trade is also moving in hardware. There has been but little improvement in collections during the past week. While there seems to be no great reason in regard to those from Ontario, western collections are still slow; no doubt the backwardness of the season has something to do with this state of affairs, particularly in the dry-goods trade. It is generally hoped that another week or two will see a marked improvement in this respect. Cheese prices hold firm. Hogs are easier, following heavier receipts. New crop unwashed wool is quoted at 13 to 14 cents per pound.

MONTREAL.—Weather conditions have not improved to such an extent as to have much influence upon general business. Sorting trade in spring lines is still quiet, and at the moment there is no unusual activity in summer dry goods. Wholesalers are still shipping goods ordered early in the season. The wholesale grocery trade is brisk and heavy shipments of goods are being made. The movement in all lines of hardware is heavy. Building operations have not been seriously affected by strikes. For all lines of smaller hardware the demand is exceedingly active in all parts of the country. For iron and steel and for the heavy metals generally the demand is equally active and prices are firm. Railway materials and construction steel are also firm in tone, and supplies are not generally equal to the demand. Country retail trade is moderately active. Collections from most districts are fair. Money is very firm and scarce. Produce is coming forward well. Receipts of butter are fairly large, but the home demand is taking care of all offerings. Cheese prices declined at the time of the longshoremen's strike, as exporters were afraid they would not be able to send shipments. At the conclusion of the strike, however, prices reacted and they are now fairly firm. Regarding the situation in the steel trade, it is interesting to note that certain double tracking which the Canadian Pacific Railroad had hoped to complete this season will not be finished, owing to the fact that it will be impossible to secure material. It is reported that the output of the Dominion Iron & Steel Company at Sydney this season will be at the rate of 30,000 tons per month, as compared with 20,000 tons a month last year.

VICTORIA-VANCOUVER. — General trade has shown some improvement during the past week. Provincial industries are more active and there is now a fairly brisk demand for wholesale lines. Collections are fair to good. In all settled parts of the province there is great activity in real estate, and values are advancing. Flour prices have advanced 20 cents per barrel, and grain prices are tending higher. The demand for all lines of hardware is brisk and prices are firm.

WINNIPEG.—More seasonable weather in this part of the country has had a good effect upon trade. Dry-goods stocks are moving better, and there is a brighter tone to general business. A big factor to be noted is the general improvement in transportation, which is gradually and steadily being relieved. Merchants are experiencing less difficulty in receiving goods. The number of immigrants is much greater than in any previous year. Seeding has been going on satisfactorily, and although the crops are late, there is every hope the consequences will not be as severe as was at first feared. Collections are still slow.

Money Market.

Continued strength in foreign exchange, with the adoption by the Bank of France to draw gold to Paris, resulted in the engagement of $3,300,000 specie at New York this week for shipment to the French capital, thus beginning the belated gold-export movement. Contrary to the expectations of Wall street, this was not followed by any signs of an immediate intention on the part of the Treasury to reduce its deposits in the national banks as a measure calculated to create higher interest rates and give a check to the gold movement. Moreover, the New York loan market remained quiet and easy so far as call money was concerned, the general rate for renewals of such arrangements being 1¾ per cent. up to Friday, when it advanced to 2 per cent. With such an abundance of funds available on call there is little disposition to effect time loans, and rates for short terms were slightly easier. On the other hand, four to six months' money is still quoted at 5 per cent, and loans running over January 1 are 5¼ per cent. as a minimum. Wall street itself is borrowing but little on these terms, but it is believed that railway companies or the syndicates which have taken blocks of new bonds and notes are paying full rates for time loans based on such securities. Still, the situation as to time money can be described as very dull, a fact which bears significantly to the ease in call loans and the indifference to gold exports. The figures of the New York national banks on May 20, reported to the Comptroller of the Currency, also tend to show that they are actually in a stronger position. As compared with their last report on March 22, 1907, those institutions display an increase of $21,795,900 in their total cash, with an expansion of $63,355,000 in loans and discounts, their total deposits gaining $87,820,000 in that period, while the amount due other banks and trust companies was $51,274,300 greater. As compared with a year ago, their cash, however, increased only $7,206,700, the loans being $41,777,900 greater, and the total deposits $12,068,200 smaller.

New York Banks.

In last Saturday's New York Clearing House averages the only striking change was a gain of $5,851,100 in the combined specie and legal tenders, which was some $2,000,000 more than the indicated actual increase in the cash holdings. At the same time the average of loans was expanded by $1,049,390, which was regarded as representing syndicate borrowings, which offset the liquidation of stock-market loans. The deposits increased $6,539,600, which figures agreed fairly well with the preceding changes, and the reserve required was $1,634,900 more, though in consequence of the gain in cash the surplus reserve increased $4,216,200. The figures of the statement compare as follows with those of the preceding week:

	May 25	May 18	Changes
Loans	$1,126,389,500	$1,124,808,700	I. $1,580,800
Specie	221,189,600	215,060,200	I. 6,129,400
Legal tenders	72,659,400	72,937,700	D. 278,300
Deposits	*1,112,640,500	1,106,100,900	I. 6,539,600
Circulation	50,659,600	50,440,400	I. 219,200
Total reserve	293,849,000	287,997,900	I. 5,851,100
Reserve required	278,160,125	276,525,225	I. 1,634,900
Surplus reserve	15,688,875	11,472,675	I. 4,216,200

The following table shows the bank holdings on the respective dates:

	May 25, 1907	May 26, 1906	May 27, 1905
Loans	$1,126,389,500	$1,049,390,800	$1,111,003,400

Bank Clearings.

[By Telegraph to BRADSTREET'S.]

BRADSTREET'S Bank Clearings Report for the week ending May 30 shows an aggregate of $2,157,204,000, as against $2,754,481,000 last week and $2,336,789,000 in the corresponding week last year. Canadian clearings for the week aggregate $72,803,000, as against $86,197,000 last week and $66,962,000 in this week a year ago. Following are the detailed returns by cities for this week and last, with percentages of increase or decrease as compared with this week in 1906:

	May 30	*Inc.*	*Dec.*	*May 23*
New York	$1,281,073,000	....	14.1	$1,637,964,000

Foreign Exchange.

Decided firmness was shown in the foreign exchange market this week. The feature at the outset was the news on Monday that $800,000 had been engaged by New York bankers for shipment to Paris, it being understood that the Bank of France had agreed to allow interest on the amount while in transit, thus rendering the operation quite feasible, with demand sterling ruling, as it did, at 4.86.70@4.86.75. It was also noted that the selling of bills against the specie engagement failed to cause any weakening of rates, as is often the case under such circumstances. In fact, the market was slightly higher on Tuesday at 4.86.75@4.86.80 for sight sterling, and no surprise was felt at the further engagement on Wednesday of $2,000,000 more gold, also for Paris. It was also noted that Paris interests, in the face of considerable competition, secured the bulk of the new gold which arrived at London this week, and that sterling exchange at the French capital sold at as low as 25 francs 12½ centimes, though later in the week it recovered ¾ to 1 centime on the news of the gold shipments from New York. It was, in fact, fully apparent that the Bank of France was endeavoring to strengthen its gold reserves and had command of the situation, so that there was considerable discussion as to the amount of specie which New York might be called on to furnish. The impression, however, seemed to be that while the apparent indifference of the money market here to the loss of the gold taken this week would tend to encourage further shipments, the margin of profit involved in such transactions was so small they would not be specially attractive to bankers. In other respects the exchange market was devoid of incidents, the supply of commercial bills being light and the inquiry for remittances fairly good, though by no means urgent. On Friday the market was heavy at first, but recovered on the later transactions, and an additional $500,000 of gold was engaged for export.

Closing quotations on Friday for actual business in other classes of bills were: Cables, 4.87.25@4.87.35; commercial bills, 4.82⅞@4.83½; francs, 5.19⅜ less 1-32@5.16¼ less 1-32; reichsmarks, 94 5-16@95⅛.

New York Securities Market.

Considerable variation was seen this week both in the price movements and in sentiment. In spite of a favorable bank statement on last Saturday, there was a dull close to the preceding week's trading, with some apprehension as to what the present one might develop. Such feelings found justification when the market on last Monday exhibited another outbreak of liquidation and short selling, the declines in instances carrying quotations for stocks not only below the low figures of the week before and those recorded in the break of last March, but in certain cases to the lowest for some year The most prominent of the causes for bearishness appeared to be unfavorable weather and crop news, the further advance in the grain market, and the announcement that $800,000 gold had been engaged for shipment to Paris. At the same time the street gave more or less attention to gossip about particular cliques and operators, the insinuations, though on the whole vague, being that such interests were continuing to sell out long holdings on the bad crop and business outlook, the apparently never-ending demand for fresh capital and the political agitation against corporations. Nor were rumors lacking that some of the liquidation was of an enforced order, representing the weakening of large accounts by the successive declines since January 1. It was also apparent that powerful operators were active on the bear side and were taking full advantage of such circumstances, as well as of pessimistic sentiment and the absence of buying by the public. The short selling, in fact, was very heavy in the earlier part of the week and contributed largely to the extreme declines in many of the prominent trading issues, such as Reading, American Smelting, the Hill stocks, Southern Railway and Union Pacific. On Tuesday there was a partial recovery in the early transactions, but before the end of the day selling pressure was renewed, and prices in a variety of cases exhibited additional declines.

By Wednesday the market, however, began to take on a better aspect. Not only had the short selling become excessive, but there was a decided improvement in the tenor of the western weather reports, causing a break in grain quotations, while it was remarked that the gold engagements, which on Wednesday were increased by $2,000,000, failed to affect the money market in any way. There was also a feeling that the President's Memorial Day address would be reassuring to railroad interests. As the day progressed, the inclination of professional traders to cover short contracts over the holiday on Thursday became more pronounced and the market had a general rally, in which Union Pacific was the especially active feature. Of events calculated to affect stocks, there were few of importance. Rumors of impending issues of bonds and notes by railroad and other companies were circulated, and one of the incidents was the weakness of the Rock Island collateral trust 4 per cent. bonds. The announcement that the corporation counsel of New York City had begun actions to test the franchises owned by the Consolidated Gas Company was responsible for that stock's decline to the lowest price it has touched in years. Amalgamated Copper figured among the weaker specialties on a reduction in quotations for speculative copper. The further break in both Southern Railway common and preferred, while it appeared to be due to manipulation, caused renewed talk of a cessation of dividends on the latter next autumn. On Friday the market opened strong and advanced in the early trading, but became dull and declined again.

Boston Stock Market.

New York's Foreign Trade.

IMPORTS.

	1907	1906
Dry goods	$3,523,354	$2,544,524
General merchandise	14,487,951	11,119,047
Total week ending May 25	18,011,305	13,663,571

Imports for the corresponding week in previous years:

1905	$11,968,899	1901	$19,561,463
1904	11,487,016	1900	9,709,416
1903	10,224,955	1899	10,151,397
1902	9,524,749	1898	7,827,210

Importations at New York for the year to date (twenty-one weeks) compare as follows:

	1907	1906	1905
Dry goods	$77,556,682	$69,196,986	$60,288,779
General merchandise	279,592,520	242,579,116	242,171,862
Total	357,149,202	311,776,102	302,460,641

For the corresponding period in years prior to 1905:

1904	$251,752,102	1900	$236,858,014
1903	253,840,811	1899	220,807,123
1902	229,712,128	1898	186,601,011
1901	231,807,311	1897	231,733,406

EXPORTS.

	1907	1906
Exports week ending May 25	$9,758,632	$11,949,067
Previously reported	249,318,942	249,381,783
Since January 1	259,077,574	261,330,850

Statistical Situation of Cotton.

The aggregate world's visible supply of American and other cotton last week, as made up by the New Orleans Cotton Exchange, is shown, with comparisons:

Week ending	*May 24, 1907*	*May 17, 1907*	*May 25, 1906*
American	2,952,233	3,079,329	2,345,018
Other kinds	1,442,000	1,411,000	1,501,000
Total	4,394,233	4,490,329	3,846,018

Of the world's visible supply, as above, there were afloat for or held in various countries on the dates given the following quantities:

	May 24, 1907	*May 17, 1907*	*May 25, 1906*
Great Britain and continent	2,662,000	2,705,000	1,878,000
Egypt	124,000	133,000	105,000
India	805,000	807,000	1,029,000
United States	803,000	845,000	834,000
Total	4,394,000	4,400,000	3,846,000

Boston Shoe and Leather Market.

The report that upward of $1,000,000 worth of black glazed kid has been sold at 1 to 5 cents under the market seems to have sufficient confirmation to warrant attention. Local circles have discussed it pro and con for several days, and it certainly has had an effect upon the market. Some doubt that the amount of goods sold is important enough to have any permanent effect; others say that the house credited with the sale was overstocked with blacks, when the demand was for colors; that colored goods are strong and will remain so for the season. In a general way the market has been very quiet, as was to be expected in the between-seasons period. Shoe manufacturers are receiving more orders, but the most of them, particularly in heavy goods lines, are not satisfied with the amount of orders in hand. Shipments are about 18 per cent. less than in the corresponding week of last year. The *Shoe and Leather Reporter's* statistics this week are as follows: Last week, 90,026 cases; preceding week, 102,533; last year, 109,214; total for 1907, 2,006,974; total for 1906, 2,078,217; decrease, 71,243.

Wool Markets.

The most important event of the week has been the sale by the leading holders of about 2,500,000 pounds of medium fleece wools which have been in dispute for several months. These were bought by the American Woolen Company, who several weeks ago offered to clean up the market on the basis of 30 cents for Michigan quarters. At that time this was generally refused, though some wools were secured at that price. It is now understood that the bid has finally been accepted, and that the bulk of this large sale was made on the 30-cent basis. This sale is of particular importance, as it not only establishes the value of the new clip, but it may also have a serious effect upon the marketing of the New Zealand crossbreds now here or on the way. Outside of this transaction the market has been rather quiet. There has been something doing in new Arizona wools, and the new Texas wools have sold moderately at 20@21 cents. Scoured territory wools continue to move fairly well, though offerings are much more liberal than the demand seems to warrant. Prices are practically unchanged, though only the best lots will bring top prices. A very choice, long staple, free wool will bring 68@70 cents for fine and 66@68 cents for fine medium. Pulled wools, for everything except As and fine As, are still a drug on the market. The bulk of the interest is still centered in the movement of the new clip in the west, where there appears to be competition between dealers and manufacturers for the wools showing the best staple. Prices have already been run up to a figure approaching last year's level, which seems to indicate that when the choicest clips are offered later, an unexpectedly high range of prices will be paid. In Oregon 19@21 cents have been paid in the majority of cases, one or two clips selling for 22 cents. In Idaho there has been a corresponding advance over last week's prices, 19@21 cents having been paid for the best clips. In Wyoming there is some wool accumulating at Caspar, but on the line of the Union Pacific the early shorn wools are pretty well cleaned up. Dealers here claim that prices paid in the west are altogether too high for this market, and are unable to see where any money is to be made while manufacturers remain in their present frame of mind.

RAILWAYS NOT OVER-CAPITALIZED.

Are American railroads over-capitalized? C. S. Sims, assistant to the president of the Erie Railroad Company, has compiled an imposing array of statistics to prove that the reply is in the negative. Mr. Sims's contentions follow:

"That the railroads of the United States are not over-capitalized (a comparison of the capitalization of European railroads indicates that the railroads of the United States have issued very much less capital per mile than those of European countries) is clearly shown by the following figures, copied from a report on the 'Transportation Routes and Systems of the World,' issued by the Department of Commerce and Labor, Bureau of Statistics, Washington:

		Capital or cost per mile
United States	1904	$55,261
Canada	1904	60,504
Uruguay	1899	52,756
Venezuela	1904	70,972
Germany	1903	98,443
Austria	1903	128,334
Hungary	1903	74,056
Belgium (state railroads only)	1903	160,893
France	1902	137,601
Switzerland	1903	104,969
United Kingdom	1904	272,737
Russia	1902	78,333
Finland	1902	32,189
Norway	1904	38,371
Sweden (state railroads)	1904	44,669
Sweden (private railroads)	1902	22,006
Italy	1902	168,212

"The capitalization of the railroads of a number of countries in addition to those mentioned above is given in this report, which also states that the average capital or cost per mile of the principal railroads of the world is $77,730 a mile. The cost of the railroads in the United States, $55,261, could be increased about $10,000 a mile were the stock owned by railroads in other companies not excluded.

"It would appear that the capitalization of the railroads of this country is over $20,000 a mile less than the average of the principal railroads of the world, and as this $20,000 amounts to over 35 per cent. of the total capitalization of the railroads of this country it is important.

"In considering the capitalization of railroads, it is always well to remember that in building a railroad the bonds are sold for what they will bring—possibly as low as 60. Again on a strong property, they may bring over 100 or above par, but in many cases in addition to selling bonds at a very large discount a bonus of stock has been added. Were not practices of this kind resorted to only the most profitable of the railway propositions could be carried out, and the capital for many desirable improvements, or new railroads, could

not be raised, because it would not be possible to issue their securities at par.

"The Interstate Commerce Commission, in its report for 1905, shows that the total net income available for dividends on the railroads of this country was $373,263,523, and there were declared in dividends $188,175,151, leaving $185,088,372 available for improvements, adjustments, or for the support of lines showing a deficit, and as the total amount of capital stock of the railroads of the United States is given as $6,680,473,280, their total earnings available for dividends amounts to 5.59 per cent. on the stock, and the amount of dividends actually declared amounts to 2.82 per cent.—surely not an excessive amount. The amount of money devoted to improvements out of earnings or set aside as surplus, or for the support of weaker lines, amounts to 2.77 per cent. on the stock. Practically all of this latter sum adds to the money invested in the railroads against which no capital is issued, and tending, in a few years, to make the actual investment in money equal to the amount of the outstanding securities of any railroad, even though they were issued at a very large discount and a stock bonus was given. Besides this gain is the natural increase in the value of the properties, amounting to possibly 4 or 5 per cent. a year, and in many cases where terminals in large cities have been acquired they could not be duplicated for any consideration; the present value being many times greater than their original cost to the railroad company.

"There is little doubt that from these two causes, any water that there may have been in the capitalization of American railroads has been very much more than made up, and that their value to-day is greater than their present capitalization, and that they could not be replaced or duplicated without greatly exceeding the present capitalization.

"That the capitalization of American railroads, if it is excessive, has not affected their charges for transportation of freight is, in a measure, indicated by the following comparisons:

FREIGHT RATE PER TON PER MILE.

		Cents
United States	1905	0.766
Germany	1904	1.352
France	1904	1.428
Austria	1904	1.503
Russia, European	1903	1.018
Russia, Asiatic	1903	1.157
England (United Kingdom)	1903	2.160

PASSENGER RATES PER PASSENGER PER MILE.

United States	1905	1.962
Germany	1904	0.992
France	1904	1.133
Russia, European	1903	0.722
Russia, Asiatic	1903	0.458

"These figures were obtained from the Department of Commerce and Labor Bureau of Statistics, and are from the British Statistical Abstract of Foreign Countries, published by the Board of Trade, London, the Interstate Commerce Commission and the London *Statist*. The Board of Trade figures as to the English railways not giving the average rate per ton per mile, the figure used 2.16 cents was found by using the average haul of English railways assumed by the London *Statist* to be 24.86 miles.

"The figures show quite clearly that the railroad freight rates in foreign countries are about twice as great as those in effect on the railroads of the United States. The passenger rates in this country, however, are very much higher than the European rates. Assuming that the rates in Germany are about an average of the European rates and that they had been obtained by the railroads of the United States, our freight earnings for 1905 would have been increased $1,109,841,221, and our passenger earnings would have been decreased $233,747,545, making a gain in net earnings of $876,093,676, or enough to have paid 13.11 per cent. on the $6,680,473,280 stock of the railroads of the United States. This vast saving in money to the people of this country amounts to $10.53 for each of the 83,143,000 people of the United States.

"Of course it is fully realized that the very large European freight rates could not have been obtained by the railroads of this country, and that if our rates had been held up to the European average the business of the country would not have been developed, and does this not bring us back to the fact that the very low railroad freight rates in the United States have, to a great extent, caused or brought about the vast development of this country? Clearly these conditions do not show the necessity for any feeling on the part of the American public towards their railroads other than the most kindly. The very low European passenger rates are largely due to the dense population and low rate of pay of the laboring classes."

ENTERED AT THE POST OFFICE AT NEW YORK, N. Y., AS SECOND-CLASS MATTER.

SATURDAY, JUNE 8, 1907.

After having its full share of vicissitudes, the Public Utilities bill has become a law in New York. After the veto of the measure by Mayor McClellan the bill went back to the legislature, where it came to a vote in the Assembly on Tuesday, being passed by an overwhelming majority—116 to 11. On the following day the Senate repassed the bill by a vote of 38 to 8, and it was signed by Governor Hughes on Thursday morning. Its main features have already been set forth in these columns. The governor held a hearing on Wednesday upon the bill providing for a maximum rate of 2 cents per mile upon railroads over 150 miles in length. Some of the questions asked by the governor in the course of the hearing seemed to indicate that he was considering the question whether it might not be better to leave the matter of the determination of rates to the new public service commissions instead of fixing a maximum by means of the bill before him. That would seem to be the natural disposition of the matter, in view of the fact that very complete power to deal with the subject of rates is given in the Public Utilities bill just signed by him.

A recent disturbance in San Francisco which resulted in an attack upon a Japanese restaurant and a bath house has been the occasion of diplomatic representations by the Japanese government. Following upon a request from the Japanese ambassador for protection for his compatriots in San Francisco, an investigation of the affair was set on foot by the Washington authorities and a report upon it was forwarded to the national capital on Thursday, the contents of which have not been disclosed. Reports from the local authorities indicate that the disturbance was an outcome of the labor troubles in San Francisco, and that racial feeling had very little to do with it save in the later stages. The Japanese press has in general refrained from hostile comment in relation to the incident, but the opposition party in Japan has been urging the adoption of a more vigorous policy on the part of the Tokio government, and the efforts of its leaders have produced a certain effect upon public opinion there. It is probable that the report of United States District-Attorney Devlin will be made the basis of some action or communication by the State Department.

A comparison of the figures of government receipts and expenditures at the end of April showed that the surplus at that time was within hailing distance of the estimate of Secretary of the Treasury Shaw for the fiscal year. At the close of May, with one month yet to go, that estimate was exceeded. The receipts for the month of May amounted to $57,488,012, a decrease of over $770,000 as compared with those for the preceding month, but an increase of over $9,500,000 as compared with the corresponding month of last year. The expenditures for the month amounted to $48,912,800, an increase of over $800,000 as compared with those for the preceding month and of over $3,000,000 as compared with those for the corresponding month of the preceding fiscal year. The excess of receipts for the month, as will be seen, amounted to over $8,500,000. The receipts for the eleven months of the fiscal year ending with May amounted to $602,594,672, an increase of over $63,000,000 as compared with those for the corresponding months of the last fiscal year, while the expenditures amounted to $537,544,708, an increase of only a little over $4,100,000 as compared with those for the like period of the fiscal year 1905-06. It will be seen that the excess of receipts over expenditures for the eleven months' period amounted to over $65,000,000, which represents an increase of not far from $59,000,000 as compared with the excess for the corresponding period of the preceding fiscal year.

Attorney-General Bonaparte has decided not to withdraw or modify in any respect the opinion rendered by him early in April giving the definition of the word whiskey as it appears in the Pure Food law. According to his view, the word should be given its ordinary significance as a word of everyday speech, and is not to be understood in any commercial or scientific sense as it might be by a distiller or rectifier, a chemist or physician. Congress must be presumed, he says, to have legislated with reference to well-established processes in the manufacture and sale of distilled spirits, and there can be no doubt that according to such practice "straight" whiskey was mixed only with two substances besides mere coloring and flavoring materials, namely, with "straight" whiskey of another kind and with ethyl alcohol.

While the increase in circulation in May was not comparable to that for the month before, being less than a third of that for April, it was yet sufficient to lift the amount per capita to the highest point yet reached, with, of course, the largest aggregate of which there is record. The increase for the month was a little over $7,600,000. For the year since June 1, 1906, there was an increase of over $196,100,000, the largest item in which was a gain of over $116,800,000 in gold certificates. Next in importance was an increase of over $44,700,000 in national bank notes. Gold coin exhibited a gain of over $12,200,000, subsidiary silver one of over $11,800,000, United States notes one of over $7,500,000, and standard silver dollars one of over $3,400,000. Silver certificates showed an increase of not quite $800,000, while Treasury notes of 1890 exhibited a decline of over $1,400,000. The total amount of money in circulation on June 1 was $2,939,782,569. On the basis of a population of 85,956,000, as estimated by the Treasury Department, this represents a circulation per capita of $34.20, an increase of 4 cents for the month, and of $1.75 as compared with the corresponding date last year.

While the Pennsylvania Railroad's management declares that its action is a matter of business policy, the announcement that the company will sell no form of commutation ticket in Pennsylvania good beyond September 30 is generally taken to be a protest, or rather an object lesson, as to the effects of the 2-cent fare bill recently enacted by the state legislature, which goes into force October 1. In explaining this step it is officially set forth that while it has instituted a suit to test the constitutionality of the law, which it is confidently expected will be favorable to the company, nevertheless, in view of the alleged fact that on a 2-cent basis the company's passenger earnings of 1906 would have been $2,000,000 less, and that the lines east of Pittsburgh in that year fell short by $600,000 of earning 6 per cent. on the amount invested in passenger service, it was decided that passenger earnings should be protected. This step naturally provokes a good deal of dissatisfaction in the communities thus threatened with the loss of their commutation fares and the imposition of the full 2 cents per mile maximum imposed by the law. It may be noted, however, that in financial circles it is looked on, with more or less approval, as a move by one of the most powerful as well as best-managed of the railroads calculated to place in strong relief the undesirability of such drastic legislation. In fact, there is a disposition to assume that it will strengthen the reaction which is beginning to show itself against measures of the same nature, one symptom of which is the apparent shelving at Albany of the bill requiring the Brooklyn trolley system to charge only a single 5-cent fare for carrying passengers the entire distance from that city to Coney Island, a rate which the companies earnestly protest would involve a positive loss on the traffic.

China has been the scene lately of a series of outbreaks which are believed to be due to the activity of a native society and to have for their object the displacement of the present dynasty. Thus far the insurrectionary movement seems to have shown its greatest strength in the neighborhood of Amoy, in southern China, but outbreaks have occurred in other sections, indicating that the movement is supported by a widespread organization. The new movement is different from the Boxer uprising of some years ago, in that it is apparently not directed against foreigners. The foreign missions seem to have been generally unmolested, though of course they are not free from apprehension of the results if the movement should continue to spread. Up to the present the native officials and the public buildings have been the principal objects of attack. The government forces have managed to keep the upper hand wherever they have come in contact with the rebels, but the revolt has not yet been stamped out, and the Triad Society, the originator of the movement, is reported to have 3,000,000 members.

For a while there has been an apparent tranquillity in the relations between the government and the Duma in Russia, and no surprise was occasioned when the latter body recently adopted a resolution expressing its joy at the escape of the Czar from the danger of assassination. This week, however, there has been renewed talk of the possibility of dissolution in the near future. It is said that some leaders among the Constitutional Democrats are in favor of appealing to the country on the basis of that party's agrarian programme. They would find their opportunity by forcing the hand of the government through the rejection of some of the temporary agrarian laws put in operation during the recess, and would thus, they believe, provide themselves with a popular issue. It is not without significance that the renewed talk about dissolution has been coincident with the reappearance in the Duma of some members of the Social Democratic party who were in attendance at the secret congress in London where an ultra revolutionary policy was advocated by a majority of the delegates.

MAY FAILURES AND LIABILITIES.

Failure returns to BRADSTREET'S for May fail to reflect much, if any, effect of the unfavorable weather conditions of that and of the preceding month upon distributive trade. There were only sixty more failures in May this year than in May a year ago, an increase of 8.6 per cent., while the liabilities were only 4.3 per cent. larger. It is worth noting also that two-thirds of the excess in number of failures over a year ago was found in New York City. In May, as in many preceding months, a few large failures provide a large part—40 per cent. in fact—of all the liabilities, and there is nothing in these to indicate any structural weakness in commercial lines. Furthermore, it is found that only four of the past fourteen years show fewer failures in May than were reported in the month just closed.

Following will be found the comparisons as to May failures, assets and liabilities for fifteen years past:

	Number	*Assets*	*Liabilities*
1907	755	$5,288,423	$10,542,895
1906	695	5,605,071	10,101,486
1905	761	6,626,676	13,845,053
1904	815	5,312,512	9,954,389
1903	686	3,689,239	7,293,089
1902	769	3,768,941	8,690,976
1901	783	3,911,956	8,629,904
1900	710	3,331,924	8,200,793
1899	720	2,724,639	5,912,216
1898	984	4,796,399	10,526,960
1897	1,054	6,662,020	13,461,542
1896	996	7,782,031	13,470,335
1895	875	4,093,651	8,576,699
1894	861	5,899,001	19,700,150
1893	1,019	17,693,072	32,087,921

It will be seen that there were 755 failures, involving $10,542,895 of liabilities, an increase of 8.6 per cent. in number and of 4.3 per cent. in liabilities as compared with May a year ago, and a decrease of a fraction of 1 per cent. in number and of 24 per cent. in liabilities from May, 1905. The failures and liabilities in May compare with similar statistics in preceding months of this year as follows:

1907	*Number*	*Assets*	*Liabilities*
January	1,112	$8,637,164	$17,119,459
February	775	5,560,793	10,092,877
March	741	6,010,043	11,192,550
First quarter	2,628	20,208,000	38,404,886
April	733	5,626,601	9,888,052
May	755	5,288,423	10,542,895

May	*No.* 1907	*Assets* 1907	*Liabilities* 1907	*No.* 1906	*Assets* 1906	*Liabilities* 1905
New England	112	$563,012	$1,336,953	108	$434,727	$997,471
Middle	266	2,177,783	5,069,613	221	1,519,898	3,068,566
Western	132	828,489	1,333,068	146	1,344,187	2,468,135
Northwestern	57	573,164	1,013,297	40	1,257,018	1,610,441
Southern	135	869,426	1,292,706	136	920,261	1,724,101
Far-western	49	246,949	469,358	37	122,230	222,434
Territories	4	29,600	57,900	7	6,750	10,338
Total, United States	755	$5,288,423	$10,542,895	695	$5,605,071	$10,101,486
New York City	141	713,878	2,131,551	103	455,263	1,011,542
Manhattan and Bronx	134	703,629	2,091,773	94	296,642	705,009
Canada	88	329,700	680,582	93	301,188	747,082

It will be noted that there were more failures in New England, the middle group, the northwest and the far west than in May a year ago, but there were fewer in the western and southern states. The excess in the far west is largely explainable by the absence of statistics from San Francisco during part of May a year ago, and in fact the bulk of the excess in that month has been furnished by New York City. Liabilities in May were smaller than a year ago in the west, the northwest and the south, and larger in the New England, the middle and the far-western states and the territories.

There were only 88 failures in Canada, involving $680,582 in liabilities, in May, as against 93 failures, involving $747,082, in May a year ago.

THE NEW TARIFF AGREEMENT WITH GERMANY.

The new commercial agreement with Germany will go into effect on July 1, the President having issued a proclamation announcing that fact on Saturday last. This agreement, the text of which was made public by the State Department a month ago, gives Germany the advantages of section 3 of the Dingley tariff law in return for the concession by that country of the duties levied under its minimum tariff to certain enumerated products of the soil and industry of the United States. The reduced rates conceded to Germany under section 3 of the Dingley tariff act have been already set forth in these columns; recapitulated, they are in brief as follows, viz: Argols, 5 per cent. ad valorem; brandies, $1.75 a gallon; champagnes—quarts, $6 a dozen; pints, $3; half pints, $1.50; magnums, $6 a dozen, and $1.90 a gallon on the quantities in excess of quarts; still wines and vermouth in casks, 35 cents a gallon; in bottles, $1.25 a case of one dozen containing not more than a quart each; paintings, drawings and statuary, 15 per cent. ad valorem.

In return for these reductions the minimum tariff rate is conceded by Germany upon the following articles, viz: Rye, wheat, barley, oats, maize, sorghum, beans, linseed and hempseed, flour (except oats), walnuts and hazelnuts, fresh apples, pears and quinces, fresh peaches and oranges, dried apples, pears, apricots and peaches, sheep, hogs, fresh, chilled or frozen or prepared meat, lard and greases, wine, tinned foods, preserved tomatoes and olives, lubricating oils, benzine, glue and gelatine, boots and shoes, wall paper, abrasive stones, phonographs, small arms, watches and cases, organs and music boxes. Special reductions ranging from 25 to 50 per cent. below the new German general tariff are secured for timber for building and industrial purposes, wooden paving blocks and wood for casks; leather, half or entirely dressed, saddlers' and trunkmakers' wares; miscellaneous leather goods and harness; India rubber, tubes, wares and rubber-coated textiles; many kinds of paper goods; glass, plate, hollow and sheet; water-pressure engines, steam engines and miscellaneous machines; freight cars, motor cars and motor cycles, and carriages.

An explanatory statement issued by the State Department declares that, according to official German statistics, the average annual value of imports of American goods into Germany in the period from 1903 to 1905, inclusive, was $227,647,000, of which it has been computed only 3.31 per cent. would be obliged under the new agreement to pay the rates under the general tariff where lower conventional rates exist. To put the statement in another way, 96.7 per cent. of the total importation of American products will continue to enjoy in Germany the treatment of the most favored nation, whether this be free entry or the lowest rates accorded to the like products of any other country. On the other hand, the statement continues, the total value of German goods that would participate in the benefit of the new agreement amounted in the fiscal year 1906 to only $1,861,285, or only 1.4 per cent. of our total importation of German goods in that year. According to German statistics, the reduction of duties on American goods under the new agreement would amount to $6,664,000 per annum, while, according to United States statistics, the remission of federal revenue in consequence of the concessional reductions in favor of German goods would amount to only $208,168 per annum, on the basis of the importations for the fiscal year 1906. A considerable number of the new conventional rates of the German tariff are not included in the schedule annexed to the new agreement, but it is said in the State Department explanation that the large majority of those omitted cover products in which the United States has no export trade to Germany, or in which American exports are of comparatively slight importance.

The President's proclamation was followed by the issuance by the Treasury Department of a circular letter of instructions to customs officers. Of this circular the most important feature is that relating to the means of ascertaining market values upon which duties are to be assessed. According to the circular, market value, as defined by section 19 of the customs administrative act, should be construed to mean the export price whenever goods, wares and merchandise are sold wholly for export or sold in the home market only in limited quantities, by reason of which fact there cannot be established a market value based upon the sale of such goods, wares and merchandise in usual wholesale quantities packed ready for shipment to the United States. The export price, it is understood, is not the purchase price, German export prices being lower than the average price in that country generally. Certificates of value issued by German chambers of commerce will be accepted by American appraisers as competent evidence, and are to be considered by them in connection with such other evidence as may be adduced. The modifications of the administrative regulations under the new agreement have given rise to some criticism on the ground that certain classes of goods imported from Germany are likely to be undervalued and brought into competition with American goods supposed to be protected by the tariff. It is understood that the validity of the new agreement will be attacked legally on the ground that it assumes to deal by executive act with a matter which should be dealt with by Congress.

SMALL STOCK SPECULATION REDUCES CLEARINGS.

Reduced stock speculation at New York seems to be almost entirely responsible for the very large decrease in New York clearings in May from May a year ago, this in turn causing a heavy decline in the grand total of the country's clearings, despite the fact that outside of New York the country's clearings in May were little below the best ever recorded in that month, and greatly larger than those of any preceding May. It should be said, of course, as regards this latter particular feature, that grain speculation was active in the west, and in addition comparisons with May a year ago in the far west are vitiated by the absence of a complete month's comparisons at San Francisco. The country's total clearings for May are the smallest reported since February, and, with that exception, the lightest reported since last July. New York City clearings are only slightly above those of February, and also the lightest, with that exception, since July, 1906, but the aggregate of the clearings in May, outside of New York, has been only five times exceeded in the country's history. Following are the aggregates of clearings monthly at all cities, compared with the same periods in five preceding years:

[Six figures omitted.]

	1907	1906	1905	1904	1903	1902
Jan	$14,911	$16,245	$11,785	$9,364	$11,032	$10,576
Feb	11,692	12,390	10,599	7,664	8,420	8,328

The total clearings at ninety-seven cities for May aggregate $12,276,056,795, a decrease of 2 per cent. from April, and of 6.6 per cent. from May a year ago, but a gain of 2.4 per cent. over May, 1905. New York City's clearings in May aggregated $7,334,853,945, a decrease of 4.3 per cent. from April, and of 16.5 per cent. from May, 1906. The aggregate at ninety-six cities outside of New York is $4,941,202,850, a gain of 1.4 per cent. over April, and an increase of 13.5 per cent. over May, 1906.

Following will be found the gains or losses, by groups, shown in May and the five months, as compared with the same periods a year ago:

	May	*Five months*
New England	Increase 2.0	Increase 5.8
Middle	Decrease 14.7	Decrease 7.3
Western	Increase 7.5	Increase 9.2
Northwestern	Increase 22.1	Increase 14.4
Southwestern	Increase 21.5	Increase 15.4
Southern	Increase 1.5	Increase 3.8
Far-western	Increase *72.7	Increase *27.4
Total, United States	Decrease 6.6	Decrease 2.3
New York City	Decrease 16.5	Decrease 8.2
Outside New York	Increase 13.5	Increase 9.7
Canadian	Increase 13.1	Increase 10.7

*San Francisco's figures only partial last year.

The middle group alone shows a decrease from May a year ago, and the northwestern and southwestern groups show the largest gains, with the exception of the far-western group, in which comparisons are vitiated by the absence of full comparisons a year ago, owing to the incomplete San Francisco statistics. Gains in the south and in New England are moderate.

For the five months of 1907, ending with May, the country's clearings show a decline of 2.3 per cent. from a year ago. The New York City clearings fall off 8.2 per cent., while those of the country outside increase 9.7 per cent.

Canadian clearings for May aggregate $370,763,072, while those for five months aggregate $1,677,479,554, gains of respectively 12.8 and 10.7 per cent. over those of the same periods a year ago.

BANK CLEARINGS AT 114 CITIES FOR MAY AND FIVE MONTHS, 1907 AND 1906.

THE NEW HAVEN-BOSTON & MAINE DEAL.

Denials of the report that negotiations were under way for the acquisition of control of the Boston & Maine Railroad by the New York, New Haven & Hartford Railroad Company met with scanty belief on the part of stock-market interests, either in Boston or New York. The disclaimers that such an arrangement was contemplated were taken as belonging to what is termed the "official" kind. In fact, no surprise whatever was occasioned by the announcements published this week that the matter was actually under way, and that the New Haven has already secured options upon sufficient of the Boston & Maine stock to give it a working control, if not an actual majority. This news was given to the financial public in two forms, one of them being in the shape of an explanation which accompanied an application to have $30,000,000 of additional New Haven shares listed at the Stock Exchange, it being set forth that the stock in question would be principally exchanged for Boston & Maine shares. More important, however, was the correspondence which has just passed between Governor Guild, of Massachusetts, and President Mellen, and which was on last Wednesday communicated to the Massachusetts legislature in the form of a special gubernatorial message. In answer to the governor's demand for positive information as to whether such a combination was proposed, the head of the New Haven system acknowledged it fully, setting forth that the deal would be advantageous not only to Boston and the commonwealth of Massachusetts, but to the business interests of the New England states in general, and that its consummation would not be attempted until it had been legalized by the state. It was set forth that the basis of the deal is to be an exchange of Boston & Maine shares for those of the New Haven Company on even terms, the minority to be offered the same treatment as the majority holders. In submitting these facts to the legislature the governor very earnestly calls for action by that body prior to its adjournment, whereby the interests of the state will be fully safeguarded, and the promises made by the railroad company's management be converted into conditions precedent to the carrying out of the plan.

Further information would show that the largest holders of Boston & Maine stock have, through the mediation of a Boston banking house, already assented to the terms, a significant feature being, as it is understood, that the New York Central and the American Express Company, the latter corporation being under Vanderbilt control, which together hold some 20,000 shares of Boston & Maine stock, are parties to the agreement. It is, furthermore, intimated that the consent of the New York Central interests was obtained by means of an additional bargain, whereby the New York, New Haven & Hartford is to sell to the New York Central its controlling interest in the New York, Ontario & Western Railway on the same terms as it acquired the stock of the last named corporation, namely, $45 per share.

The completion of this very important combination, if it can be effected under conditions approved by Massachusetts and other New England states, will be of far-reaching importance to that section of the country. As has already been pointed out, it would place in the hands of a single corporation practically all the railways of the eastern states, with the exception of the Boston & Albany and Rutland roads, which are leased to the New York Central; the Vermont Central, which is controlled by the Grand Trunk, and a few comparatively short lines in the state of Maine.

REAL CONDITIONS IN MEXICO.

To the Editor of BRADSTREET'S:

SIR — American capital employed in business, mining and agriculture in Mexico is conservatively estimated as aggregating $700,000,000, and it seems only proper that some care should be exercised before publishing news about Mexico of a startling and untrue character. It may be remembered how absolutely sure the American and European press was last fall in predicting a revolutionary movement which was to break out on the Mexican national holiday, September 16, ascribing to it the absurd object of immolating all foreigners on the altar of patriotic fanaticism. Perhaps it is worth noting that no foreigner lost his life on that day, and that no one was molested.

It is natural to some degree to expect the worst of foreign countries, and the silliest rumors if repeated sufficiently often may at last carry conviction. Tracing these fairy tales we find their source close to the new arrival, who writes long letters to his relatives at home about his dangerous life in far-away countries. All is so strange and different from at home, too, that odd occurrences are magnified. Masses of people throng the streets dressed in a style never seen before and speaking a language never understood. A word is caught and badly digested, a joke is taken in earnest, and at last the bewildering impressions explode in fantastical prophecies of slaughter.

Never has the foreigner here been persecuted simply for being such, not even in the most troublesome times, nor will he ever be in this country, where almost every family of any standing counts foreigners among its relatives. If at last, after the uncalled-for predictions have proved untrue as often as they were made, the admission is forced from the pessimist that conditions are stable in Mexico, he will retire into his last stronghold, putting the somewhat stale query: But what will happen when Porfirio Diaz relinquishes the management of the state affairs to weaker hands? Those acquainted with Mexico will unanimously answer that not the slightest shock will be felt beyond that of sincere sadness over the loss of this most capable ruler. Why should his successor be weaker? Mexico has produced scores of strong and able men, and will again if need be.

Mexico of to-day is not the Mexico of thirty years ago. Thirteen thousand miles of railroad track and sixteen thousand of telegraph wire, of which then none were existing, have brought the south into contact with the north, have destroyed the local prejudices the west may have held against the east; and if necessity should arise, troops well disciplined can be quickly moved to the remotest corner of the republic. Thirty years ago Mexico knew not

industry; commerce was poorly developed and ceased almost yearly during the rainy season. Interests centered in the affairs of the village and city, and when large they ended at the frontier of the state. To-day Mexico is a nation well knitted together with strongly defined characteristics plainly to be discerned wherever there is Mexican soil. Industry in many lines has sprung up, commerce has been developed in a way unthinkable toward the end of the last century, and mining and agriculture have received enormous impetus from foreign capital, fostered by the government. In spite of this phenomenal progress, whenever a competent business man is asked for his opinion on the future, be he agriculturist, miner or merchant, he will enthusiastically express his conviction that what has been done has been like scratching the surface of possibilities; that the country's resources have not been drawn upon to any extent; that it is capable of much greater things, and that the advance throughout the realm of business that will be made during the next ten years will leave the present status as far behind as 1870 was, in this sense, behind 1907.

It is seldom realized that Mexico enjoys a political situation, both as to interior conditions and exterior relations, probably not equaled by those of any other nation of importance. The unemployed is not known here, hands are begged to work for wages which allow of living well in this mild climate, trade unions have scarcely begun to form themselves, and strikes are few; the socialist and anarchist are entirely missing, as are parties sufficiently strong in number, or through their principles, to put obstacles in the way of general progress. Interior strife is not to be feared. In a land so rich in commercial possibilities nobody has time for political intrigue, and the nation's will, overpowering all other inclinations, wishes and interests, calls simply for a situation which will permit of doing business under a steady and orderly régime; that is, for the continuance of the present peaceful order of things. The political schemer has no chance to enact his plans, whatever they may be, as they invariably must appear infantile and utopian to the overwhelming majority of the nation.

No clouds are to be found on the horizon of foreign affairs. The time has gone by when a European power would dare invade Mexican territory. Its neighbors are only two—the United States and Guatemala. The colossus of the north wishes his sister republic well, and any points inviting elucidation are settled in the most amicable spirit. Should ever difficulties arise they must be looked for toward the south, and even a war in that quarter, which no responsible Mexican statesman meditates and much less wishes, could be no danger either to the resources or to the prestige of Mexico. It seems then that the prospective American investor in Mexican enterprises should not let himself be diverted from his purpose. He will not easily find another foreign country where he may do business under as favorable conditions as in Mexico. A stable government and an equally stable currency—that both are so may be considered accomplished facts; a mild and varied climate, allowing the cultivation of the products of the temperate, tropical and semi-tropical zone; perfect personal security, fertile lands at nominal prices, simple and liberal mining laws; all these, together with what we already mentioned, constitute inducements which should not be overlooked either by the capitalist or small investor, for whose benefit mistaken views on the republic and hypothetical prophecies on its future should be placed in their true light. J. K.

City of Mexico, June 1.
